THE AUTHOR.

PREFACE.

IMPLRIAL INDIA of the present day is a vast country and a varied field is a matter for surprise how little is known of its Geography as a whole To convey a comprehensive knowledge of the Geography and present Lytent and Resources of this great Empire, as well as of the Native States embraced therein, in a brief and convenient form, made as complete as a judicious utilization of available and authentic materials of the most recent date could render it, has long been the desire of the compiler. The difficulty of bring ing so wide a subject within convenient limits, so as to reduce the labour of reference to a minimum, has been very great, how far success has been attained in the attempt now made, the public will decide. A work like this -the first of its kind relating to Modern Indian Geography,-has involved considerable labor and thought, and no prins have been spared to make its form attractive as to arrangement, and its contents correct as to detail. As a handy work of refer ence for the literary and official world of India, as well as of Europe, and for those whose work or tastes may lead them to enquire about matters connected with England's Indian Lampire of the present time, it is hoped that this Index will prove of some practical value

The authorities consulted will be found at the end of the text

BRIEF GENERAL DESCRIPTION

Area, Position, Boundaries, &c

The territories under the Government of the Punjab include all the country from the river Jumna on the east, to the Suleman mountains on the west, and from Kashmir and the Swat country on the North to Rapputana and Sind on the South This extensive Province one of the most important in India, is situated between 27° 30 and 35° 0 North Lautude and 69° o to 79° o East Longitude, the extreme length being about 800 miles and extreme width about 650 miles The area of the British possessions within these Jimits is 104 973 square miles that of the native dependencies about 101,534 square miles the total area being about 206 507 square miles of which less than one-third are cultivated one fourth culturable and the remunder unculturable waste of the river Bias was annexed in March 1840 on the close of the second Sikh war The Jullundur Doab and the hill district of Kangra, were ceded in March 1846 after the first Sikh war The country east of the river Sutley formerly designated the Cis Sutley States, and including the territory on the left bank of the Sutley was annexed in December 1845, the lapsed estates being brought under British administration in January 1847, and the hill district of Simla being required after the Gurkha war of 1814 16 territory, west of the river Jumna was transferred from the North Western Provinces in February 1858

Topography, &c

Punjab Proper is so called from two Persian words signifying 'five waters' in reference to the five great tivers which flow through it. With respect to the property of the designation it is however to be observed that there are in fact six rivers, the India, the Jidium, the Clenab, the Rati the Bias and the Sulley, but as the Bias has a much shorter course than the others it seems to have been disregarded when the name of the country was bestowed. In this description the whole country lying within the Lieute nant Governor's jurisdiction, is designated as "The Punjab Province.

The northern and southern parts of the Punjab Province differ very greatly in physical features. On the north-east runs the western portion of the great northern mount that harrier of our Indian empire known as the Humalayas or Humaleh, consisting not of one but of a vast series of ranges and valleys separating the upper basins of the large mees, from the Jumna on the east to the Indias on the west, and skirted on the southern side by the lower or subordinate ranges known as the Sewaliks and Salt Range. The North West portion is also very mountainous, the hills beyond the Indias forming a series almost like a continuation of the Humalayas, and connecting with the Suleman range which forms the western boundary of the province for some 300 or 400 miles. The Salt Range runs east and west between the Jhelum and the Indias. The southern face of this range is for the most part abrupt and precipious, and the highest point on it is Salesar 4 994 feet. On the west of the river Indias the range is continued until it meets the Suleman Range and the name then changes to that of the Kalabash hills.

The plans of the country may be described as vast expanses of alluvial clay and loam intersected by the great rivers of the province of which the Indus is the chief, (see also Bombay Presidency). The great invers from which the Pumpla Proper takes its name, form natural divisions of a large portion of the country, known here as the Doads. These divisions stricts south west between the niver swith 1 regularity unbroken by nny eminence of importance, and decline imperceptibly from about 1,600 feet above sea level to about 200 feet at the junction of the united streams with the Indus. The long and marrow strip ween the Suleman range and the Indus is known as the Dengat (Upper and Lower), the

country lying between the Indus and the Jhelum, is the Sund Sagar Deab; that between the Jhelum and the Chenab, the Jack or Chap Deab; that between the Chenab and the Ravi, the Rehlam Deab; that between the Ravi and the Bias, the Bari Deab, and that between the Bias and the Sutlej, the Jullundur Deab. Of these Deabs the Sind Stgar is the most extensive, while that of the Ban is by far the most populous as well as the most important, containing as it does the three great cities of Lahore, Amritsar and Mooltan. These Deabs have some features in common; in the submontane portions vegetation is most luvurinit; in the vicinity of the rivers the tracts are enriched by their alluval soil and fertilised by inundation, while as the higher central parts are approached, uncultivated land, covered with low brush wood and reed grass, is met with, affording boundless graing grounds for camels, cattle, sheep and goats. Towards the lower extremities of the large rivers, as they approach each other, the country becomes nearly level, in which, owing to the extremely scanty minfall, cultivation is maintained by means of numerous small canals or irrigation channels, which intersect the country in every direction.

In consequence of the nearly unbroken flatness of the surface, the great rivers frequently change their courses in an extraordinary degree. The Sutley which formerly ran close to the town of Ludhiana, is now several miles to the northward; the Rau which once washed the walls of the city of Labore, runs in a channel three or four miles off to the northward; the Chenab which ten or twelve years ago ran close to the town of Ramnagar, is now four or five miles distant, and the same applies to the Jhelum. So the Ghara at no great distance of time held for above 200 miles a course considerably westward of the present and parallel to it.

The Sutlej, the most eastern of the large rivers above named, rising in Thubet, unites with the Bias at Harikl, a few miles from the village of Sobraon, the scene of our great battle with the Sikhs, the united stream for about 300 miles to the confluence with the Chenab, is then called the Ghara. The Chenab meets the Jhelum near Jhang, and the Ravi near Sirai Sidhu; this stream then loses the name of Chenab and takes the name of Trimah, or 'three waters' for a further distance of 110 miles to the junction with the Ghara at Madwala; from this point to the confluence with the Indus near Muthankot, a further distance of about 60 miles, the single stream of these united waters bears the name of Punjnad, or 'five streams.' These noble streams, besides affording means of inland navigation scarcely equalled, are of inestimable value for the purposes of irrigated.

Amongst the minor rivers of the province, are the Cabul and Swal rivers in the Peshawar valley, the Kuram and Lumi in Upper Derajat, the Sohan near Rawalpindi and the Markanda and Ghagar in the Umballa District, the two last-named losing themselves in the Bickaneer desert.

The country lying between the Sutlej and the Junna is not properly part of the Punjab Proper. It includes in the upper part, the Cis Sutlej states, and in the lower, the Delhi territory. The hills in this latter portion of the province appear to be spurs or offshoots of the end of the Aravalli range, the principal being the hills in the Delhi and Gurraon districts.

The means of communication in the Punjub include rivers and canals, ordinary roads a drout 2,500 miles, the length of made roads about 2,500 miles, and the length of Railway lines open for traffic at the present time is about 2,500 miles Of the Railway lines there are four within the limits of the province, rise the Stud, Punjub and Delhi Railway, open for traffic; the Punjub Northern State Railway open up to Jhelum, the extension to Rawalpindi being under construction and which will be very shortly opened for traffic; the Indus Valle, State Railway from Moolian 21 Buhawalpurt o Rohri, open for traffic, and a small section of the Raylwan State Railway from Delhi to Rewary, with a branch to Farsknagar, also open for traffic. Branch

24

feeders to these lines, viz from Ludhiana to Ferozepore, from Amritsar to Shahpur, from Jullundur to Hoshiarpur from Umbalia to Kalka from Raiwind to Kasur, from Wazirabad to Jummoo 12 Stilkot and from Wazirabad to the Salt Range, are in contemplation Among the principal of the various canals which run through the province are, the Bari Doab Canal the Western Jumna Canal the Sirhand Canal, the upper and lover Sutley Canals, and the Delhi and Gurgaon irrigation works Of these the Bari Dorb Canal is the most important, leaving the Ravi at Madhopur where the river debouches from the lowest of the Himalayan ranges the main line 247 miles in length, after throwing off branches to Lahore Kasur and Sobraon, passes through Amritsar, and crossing the Sind Punjab and Delhi Railway at Changamunga station, again empties itself into the Ravi addition to the main line 247 miles the Kasur branch 84 miles, the Sobraon branch 61 miles and the Labore branch 74 miles make up an aggregate length of 466 miles The main line of the Sirhind canal leaves the Sutlei at Runar

Climate and Sanataria

The climate of the Punjab is characterized by much drought and as compared with that of the rest of Northern India is more given to extremes, the heat being intense in the summer months owing to the general scantiness of the run fall (except in the sub-Himalayan districts) and the cold great during the cold season which lasts longer than that of countries further south The hot season begins about the middle of April and the heat is almost intolerable from that time till August, being greater than elsewhere in India Frequent dust storms then occur and on calm days spiral columns of dust arise and travel on eard whirl ng round continually for one or two miles before subsiding September the heat moderates October is temperate and agreeable and from November to April it is cold and frosts occur at night. The run fall throughout the province chiefly occurs in July and August but a considerable amount of rain falls in the winter and early spring months especially in the northern and western districts. At the hill stations the rain fall is considerably heavier than in the plains. The following are the Sanataria of the Punjab province, they are 15 in number, via -Murree in district Rawal pindi height 7 518 feet, Cherat in district Peshawar, height 4 497 feet, Sakesar in district Ihelum height 4 994 feet , Dalhousse height 6,740 feet, and Balloh height 4 584 feet in district Gurdaspur, Blagsu, height 4 058 feet, and Dharmsala height 6,xxx feet, in district Kangra, Simla, height 7,084 feet Kasauli, height 6,173 feet Dagshai height 6 100 feet Sibathu height 4 253 feet, Jutogl height 6,370 feet Solon, height 5 165 feet, and Sanawar, height 5 750 feet, all in district Simla, and Sheil Budin, height 4 516 feet. in district Dera Ismail Khan See also list of Punjab Military Stations

Stables and Manufactures

The crops cliefly grown in the Punjab are, in the spring harvest, wheat, barley, pulses oilseeds, vegetables, tobacco and poppy, and in the autumn harvest, millets, muze rice cotton sugar cane pulses oilseeds, vegetables and indigo. The cultivation of ter is almost exclusively confined to the Kangra valley, in which there are about thirty plantations. Of the mineral products of the Punjab the most important is the rock salt found in the hills of the Salt Range, and Kankar, which consists of irregularly shap ed pieces of calcareous concrete, abounds in most districts. It forms the chief material for road making and also yields when burnt, an excellent lime for mortar Alum is produced in large quantities at Kalabagh on the Indus in the Bannu district are produced in several of the plain districts and of a better description in the hills, but the finer kinds of wool used in the manufactures of the principal towns are chiefly obtained from countries beyond the frontier The cultivation of silk has been attempted in a few places, but without any great success as yet

Agriculture is the chief occupation of the people, but the minufacturing industry is
very considerable and important, silk and cotton goods are extensively made in most of the
large towns,—the silks of Mooltan Aruntisur, Lahore, Shupabad and Lera being noted in the
Indian markets,—carpets, brocades, cullers and arms are also extensively mainfactured.

Form of Administration

On the annevation of the Punjab in March 1849, a Board of Administration for its affairs was constituted, to which the Commissioners of the Trans and Cis Sutlej States were also made subordinate. The Board was abolished in February 1853, and its powers and functions were vested in a Chief Commissioner, subordinate to whom a Judicial Commissioner and a Tinancial Commissioner were appointed. After the transfer of the Delhi territory from the North Western Provinces, the Punjab and its dependencies were constituted a Lieutenant-Governorship from the 1st January 1859, Sir John Lawrence who had been hitherto the Chief Commissioner, being appointed the first Lieutenant Governor.

In 1866 a Chief Court, consisting of two judges, a barrister and a civilian, was substituted for the Judicial Commissioner, and which was constituted the final Appellate authority in criminal jurisdiction in cases of European British subjects charged with serious offences. In 1869 a third judge, a civilian, was added to this court,

For administrative purposes the Punjab Province is divided into ten divisions, with an average area of 10,567 square miles, each under the control of a Commissioner. This ten divisions comprise thrift two districts, with an average area of 3 300 square miles, each under the control of a Deputy Commissioner, and these districts are again sub-divided into 132 tahistifs, or revenue and judicial sub-divisions of districts, with an average area of about 800 square miles, under Tahisidars or sub divisional officers

Census

On the 10th of January 1868, a Census of the British possessions under the Government of the Punjab, was taken, which showed a total population of 17,604,505 souls. At the beginning, of 1855 the total population was estimated at not less than 14,668,287 inhabitants, the increase in 13 years amounting to nearly three millions. No later cansus has been taken, but presuming that the population has increased in the same ratio during the past eleven pears, (e.e., from the date of the last census) as it did in the 13 years preceding, it may be roughly calculated that the population of the province at the end of 1878 amounted in round numbers to 20,143 cos souls. The proportion of females to males is a little less than half. The average population per square mile for the whole province was 168 in 1868. Of the total population the agricultural dasses compose 55 per cent, non agricultural 45 per cent. The whole population of the British portion of the Punjab has been classified as follows —9,334 472 Mahomedans, 6,125 616 Hindus, 1,144 o88 Sikhs, 978 198 Aborigines and others, and 22,131 Christians, European, East Indian, and Native

The North-Western Provinces. •

Comprising 7 Ditisions, or Commissionerships, embracing 35 Districts.

BRIEF GENERAL DESCRIPTION.

Area, Position, Boundaries, &c.

The territories under the jurisdiction of the Lieutenant Governor of the North Western Provinces he between the parallels of 23° 51' and 31° 5 North, and 77° 4 and 84° 43 East Longitude Inclusive of the territory of Native Feudatory States within the jurisdiction, estimated at 5,125 square miles, they comprise a total area of 86,902 square miles These provinces are bounded on the North by a part of the Punjab hill state of Bushahr, Chinese Thibet, Oudh (now included in the N W P) and Nepal, on the South by the Chota Nagpore Division of Bengal, the Rewah State, the Native States of Bundel khand and the Saugor Division of the Central Provinces, on the East by the Behar Pro vince of Bengal, and on the West by the Native States of Gwalior, Dholpur and Bhurt pore of the Central India Agency, and the river Jumna up to its confluence with the Tonse, beyond which point the latter stream forms the boundary separating the Provinces from the Native States of Sumur and Jubbal in the Punjab jurisdiction

Topography, &c

The greater portion of this territory consists of an alluvial and gently inclined plain, dipping towards the south east and open on that side To the south west this plain abuts upon the outlying spurs of the great elevated plateau of Central India On the north east he the plains of Rohilkhand and Oudh, on the south east, the plains of the Benares Division To the south west of the river Jumna lies the tract called Bundelkhand, which for a few miles from the banks of that river on the south, differs little from the comparatively level country on the north Beyond this level country, hills appear, at first isolated then gradually assuming the formation of groups and ranges, finally merging in the Khaimur and Vindhya chains, covered with extensive forests and jungle, and traversed by streams that form tor rents during the rainy season. Turning to the north we are met by a marshy belt of land known as the 'Tarat,' and between this and the hills, by a belt of waterless jungle, formed of boulders and the debris of the lower ranges of the Himalayas, and extending from four to fourteen miles in breadth, called the 'Bhabar' To the west of the 'Bhabar' come the Kotla, Path and Dehra Duns or Valleys The largest of these 'Duns,' which all lie nearly parallel to the great chain of the Himalayas beyond, is the Dehra Dun, 48 miles long, the centre of which (2,229 feet above the sea level), divides the valley into two portions, with two distinct slopes of drainage to the east and west, the Asnu and Suswa rivers ema nate from this central elevation, the former flowing to the Jumna, the latter to the Ganges

The Himilayan tracts included within these provinces consist of the districts of Kumaun and Garhwal, and native Garhwal or Tehri,-the Kumaun division embracing all the ranges and valleys from the plains to Thibet-and of the tract known as Jaunsar Bauar The exterior ranges rise to a height of 7,000 or 8,000 feet, increasing gradually in parts, and in some places rising abruptly to this height. The elevation gradually increas es again until 10,000 and 11,000 feet are attained in the spurs directly connected with the snowy range, we then meet the peaks of Trisul (22,342 feet), Nandi Debi (25,661 feet), Nandi Kot (22,538 feet) Badrinath and others, all situated to the south of the great central axis of the Himalayas The Jaunsar Bawar tract comprises similar hilly country lying between the upper courses of the Jumna and Tonse rivers These tracts form the great timber reserves of the North Western Provinces

The principal river of these provinces is the Ganges, rising in the mountains of native . Garhwal or Tehri, and flowing with a south easterly course. On the right bank of this river near Hardwar, the great Ganges Canal is drawn off The next river in importance is the Jumna, also rising in native Garhwal to the west of the Ganges, and flowing for nearly

two thirds of its course in almost the same direction as the Ganges, finally meeting with it at Allahabad. The discharge of the Jumna as it enters the pluns has been estimated at 4,000 cubic feet per second in March, and that of the Ganges at Hardwar at 7,000 cubic feet per second, at Benares the breadth of this last named river during the winter season is 1,400 fiet, with an average depth of 35 feet, and a discharge of 19,000 cubic feet per second During the runs season the breadth at the same place is 3 000 feet and the rise 43 feet. The other rivers flowing into the Ganges, are the Ramganga rising in the Tarai, the Gumti rising in the swamps of Rohikhand, and the Gogra, called in its higher course the Kainrala. This last river use with the Ganges itself in volume and the number of its tri butary streams, while it surpasses the Ganges in velocity. On the tight bank, the Jumna receives the large rivers that drain the eastern portions of the Rapputana, Central India and Bundelkhand Strites, Try, the Chambal, the Betwa and the Ken

The canals of these prounces inigate nearly one million acres annually and yield a re-enue of close upon a quarter of a million sterling. The principal are the Ganges Canal, opened in 1851, consisting of 654 miles of main canal, and 5.078 miles of distributaries, watering a tract of country in the Doah, 320 miles in length and 50 miles in breadth the Eastern Junina Canal, opened in 1830, consisting of 130 miles of main canal and 625 miles of distributaries, watering a tract 120 miles long and 15 miles broad the Agra Canal, opened in 1874 75 miles in length, irrigating about 400 000 acres the Dehra Dun Canal, 67 miles in length, irrigating about 30 000 acres and the canals in the Hamippur and Jhansi districts, with a toral length of 33 miles. Besides these there are other minor canals in Rohilkhand, opened at various times since 1874, for irrigating the belt of country along the Jarat where much rice is raised.

The East Indian Railway (1,2793/ miles in length) runs through the middle of these provinces up to the city of Delhi From Allahabad a line to Jubbulpore (2233/ miles in length) connects the East Indian Railway with the Great Indian Peninsular Railway The Oudh and Rohilkhand Railway (5473/ miles in length) joins the East Indian Rul way at Benares, Cawnnore and Aligarh The Sind, Puniah and Delhi Railway (5533/ miles in length) runs from Ghaziabad on the East Indian line, to Lahore and Mooltan in the Punish, vid Meerut, Saharanpur and Umbalia The State Railway from Agra 212 Bhurtpore joins the Rajputana State Railway, running from Delhi to Jeypore and Amere The Sindhin State Railway (69 miles in length) runs from Agra to Gwalior tid Dholpur There are other light Railways connected with important centres of the East Indian and Oudh and Robilkhand lines, vir - The Hathras and Muttra line, length 29 miles, in full working order, the extension to Achinera from Muttra being in course of construction, the Gha spur and Dildarnagar line, length 12 miles the Caunpore and Farukhabad line, length 84 miles also under construction, while surveys are in progress for the Cawnpore and Mau Ranspur line, the Manskpur and Banda line, the Bareslly and Puliblut line, the Suapur, Lucknow and Rae Bareill; line, the Balramghat extension to Bahrauch and Goralhpur 112 Gonda and Basti, the Jaunpur and Asamgarh line, the Morad abad and Ramnagar line, and the Roorkee and Dehra line 211 Hardwar The whole of the North Western Provinces are also well supplied with first-class metalled roads, the chief of which is the Grand Trunk Road, running through the principal towns of the Doab

Climate and Sanataria

With the exception of the Tarat, the districts of these provinces are as a rule healthy. The climate is however subject to great extremes, the cold of winter being severe and the heat of summer almost intolerable. The hot nesterly winds of April May and June are especially trying to European constitutions. The cold season commences with the close

of the rains in October and lasts until April in the upper districts, in the Benares Division it may be considered to extend from November until the beginning of March weather succeeds and lasts until the beginning of the rains, which set in usually about the latter end of June and continue until the middle of October The thermometer during the hot weather months ranges from 86° to 100° in the shade, the average being about 04° The average yearly rain fall in the plains is from 30 to 45 inches, increasing gradually towards the hills, where Mussoone receives on inches and Nami Tal 115 inches. The climate of the Benares Division is more moist and cool, and partakes somewhat of the character of that of Bengal The Sanatoria of the North Western Provinces, seven in num ber, are the following, 215 -Chakrata height 6.88; feet, Mussoorie, height 7,026 feet, and Landour, height 7.450 feet, in district Dehra Dun Ranikhet, height 6.885 feet. Nami Tal, height 6,568 feet, Almora, height 5,074 feet, and Pithoragarh, height 5,468 fact in district Kumaun See also list of Military stations at page 35

Stables and Manufactures

The principal crops grown and exported are cotton, opium, indigo, rice, barley, maize, sugar cape wheat potatoes calseeds and the millets, tobacco, lacdve, safflower, and salt netre are also exported. Tex is largely grown in the Delita Dun and Kumaun, districts. and potatoes are extensively produced in several districts, having become one of the great food staples of the country The North Western Provinces are not rich in minerals. but iron, lead and copper-ores abound in Lumaun, Lankar, an inferior kind of limestone, much used for roads and building purposes, is very abundant. The principal manu factures are sugar at Shahiahannur leather at Campiore, carnets and embroidery at Mirza pore, and kimkhwabs (gold brocades) at Benares Brass and copper utensils for cooking purposes, cabinet work and cutlery are manufactured in every considerable town

Form of Administration

The Lieutenant Governor is the chief executive authority in these provinces, which for administrative purposes is divided into seven divisions embracing as districts, each divi sion is under the superintendence of a Commissioner and each district under a Magistrate Collector The districts are again sub divided into talists or sub divisions, each under a native Tahsildar or Sub-Collector Certain districts are regulation while others are non regulation The Regulation districts are those in which all the laws and regulations, apply cable to these provinces are in force, the Non Regulation districts are those to which only certain portions of the law have been extended. They form the Kumaun and Jhansi divisions, also the Tarai. The chief executive officers of the non regulation districts are styled Deputy Commissioners, having civil, criminal and tevenue powers In the regulation districts besides the Magistrate-Collector, there are three classes of Civil Judges, all subor dinate to the High Court at Allahabad, the seat of Government

Consus

The last census taken of the North Western Provinces was in 1872 In 1848, 1853 and 1865 enumerations of the population were made, with increasing accuracy on each successive occasion In 1865 the total population recorded was 29 684,347, in 1872 the population numbered 30,776,442 souls The increase has been 3 65 per cent , while the Hindu population shows an increase of from 25 495,871 in 1865 to 26,542,600 m 1872, the Mahomedans appear to have remained almost stationary, their total for 1872 showing 4 186 913 against 4,188,476 in 1865 The population per square mile for the whole of the North Western Provinces was 376 in 1872, and was classified as follows -

21,626 Christians, Europeans, East Indians and Natives, 4186,913 Mahomedans, 26,543,600 Hindus, 14,759 Buddhists and Jains, and 11,144 Abongines and others. The agricultural populotion is 56 per cent of the whole. The district and city of Benares are the most populous in these provinces.

BRIEF GENERAL DESCRIPTION

Area, Position, Boundaries, &c.

The Province of Oudh, which was annexed by the British Government under the administration of Lord Dalhousie in 1856, was at first a separate Chief Commissionership under the Supreme Government, it was afterwards incorporated with the North Western Provinces, on the 1st January 1877, the Lieutenant Governor of the North Western Provinces, bearing the additional title of Chief Commissioner of Oudh

The Province is situated in the middle valley of the Ganges, which river forms its Southern boundary, on the East and West it is enclosed by the older acquired districts of the North Western Provinces, with Jaunpur, Basts and Azamgarh on one side, and Shahjahanpur, Farukhabad and Cawnpore on the other, on the North the boundary, partly natural and partly artificial marches with that of the independent kingdom of Nepal. Its greatest length from North West to South East is 234 miles, and its breadth 150 miles. Oudh lies between 25° 34 and 29° 6 North Latitude, and 79° 45 and 83° it. East Longitude The total area of the Province is 23,954 square miles, of which 13°126 square miles are cultivated with crops, 952 square miles are covered with orchards of mango and mohwa trees, 1,134 square miles, or about 6½ per cent of the total area, are covered with likes ponds and rivers, 478 square miles are coupied by the sites of towns and villages, 243 square miles with roads, 1,642 square miles, or about 7 per cent., are barren waste, and of the remainder 825 square miles are Government Forests, while 5554 square miles, of about 22 per cent of the whole, are arable waste

Topography, &c

The general surface of the country is a plain sloping from North West to South East, varied here and there with almost imperceptible undulations, the highest part of the country being the high land north of Dudwah Ghat in Khairagarh, which is 600 feet above sea level, while the lowest point, on the border of the Jaunpur district, is 220 feet. The first or lower chain of the Himalayas, which bounds the province on the North East along the Gonda district, is from 2,500 to 4 000 feet in height. This chain is one of four narallel ranges running through Nepal, each loftier and more remote, one rising 2 little above the other, all of which are distinctly visible in the rains from Fyzabad and Sitamur, a distance of nearly 200 miles The main rivers are the Ganges, which runs along its southern boundary, the Gumti, the Sarda, the Rauriala and Gogra, the Ramganga, the Sai and the Rapti. Their aggregate dry weather discharge is 18,800 cubic feet per second. and the entire river discharge reaches 20,000 cubic feet, or half the quantity of the five rivers of the Punjab, their channels lie on an average from 20 to 50 feet below the level of the country The rivers of the province afford about 1,350 miles of navigable stream Numerous Jhils or marshes exist, only two of which however can be dignified with the name of lakes, tr., Behti in district Partabgarh, and Sandi in district Hardor The forests of Oudh he principally in the districts of Kheri, Bahraich and Gonda, on the North

The Oudh and Rohikhand Railway runs through the entire length of the Province, connecting with the East Indian Railway at Benares, Cawapore and Aligath Surveys are in progress for branch feeders to this line as detailed already at page 37.

Oudh is a tropical country, a little smaller than Scotland, and somewhat larger than Denmark, but with a population more than double that of both countries put together The country along the nor-therm forniter is thinly population.

Climate.

Though the climate is subject to extremes of temperature, sometimes rising to 112° in the summer and sinking to 35° in the winter, it may be briefly described as a mean between that of the Punjab and North-Vestern Provinces, and that of Bengal, for while the cold is not so great, nor the dry heats so intense as in the former, the difference in the seasons is far more marked than in the lower Provinces of Bengal with their moister though more equable temperature. Its three seasons, the cold, the hot and the rainy, are well defined, the first extending from early in October to end of March, the second following, and the third commencing with fair regulatity in the middle of June and lasting to the middle of October. To a European the climate of Oudh during the short cold season seems nearly perfect. The plains are subject to hot sultry winds from the west and occasional fierce hurricanes.

Staples and Manufactures.

A large amount of wheat and other edible grains is produced in and exported from Oudh; sugar, tobacco, saltpetre and oilseeds are also produced and exported in considerable quantities. Some of the Oudh rice and tobacco are of superior quality. The population being essentially agricultural, the province can boast of no manufactures worth mentioning.

Except minute particles of gold, which are washed down by the hill torrents in quantities too infinitessimal to repay their collection, valuable minerals are not known to exist. Kankar or carbonate of lime evists all over the province, and is used for the production of lime for building, and for roads.

Form of Administration.

The administration of Oudh is carried on under the Non-Regulation system by the tentant Governor of the North-Western Provinces, who is also styled Chief Commissioner of Oudh, (tile the opening paragraph of this description). For administrative purposes the province is divided into four divisions, each controlled by a Commissioner, and subordinate to Commissioners are 12 Deputy Commissioners, each holding executive charge of a district. In every district there are three or more subdivisions, the direct management of each being entrusted to a native Sub-Collector, or Tahsıldar. There are 44 such sub divisions in the 12 districts of this province.

Census.

There has been but one Census in Oudh, taken on the night of the 1st February, 1869. The Area of the Province being 23,954 square miles, and the population as shewn by the Census Returns, 11, 220,232, there were then 465 persons to each square mile. In density of population Oudh surpasses most parts of India and no European country approaches it. The Census Returns classify the population as follows.—1,201,253 Mahomedans; 9,971,236 Hindus, 7,531 Christians; 40,212 Soldiers and Prisoners, European and Native.

BRIEF GENERAL DLSCRIPTION

Area Position Boundaries &c

The territory under the administration of the Lieutenant Governor of Bengal, comprising the four provinces of Bengal Proper, Behar Choia Naggore, and Orissa lies between 19, 28 and 29, 29. North Lattude and 81, 35, and 9°, 46. East Longitude These provinces constituting the Bengal Government are bounded on the North by the independent native sixtes of Nepal Sikkim and Bhutan on the East by the province of Assam, the hilly country occupied by the Lushai and Kuki tribes at d the Arakan Hills and District of the British Burnah Province, the South is washed by the sea known is the Bay of Bengal, and on the South West and West by the Ganjam district of the Madras Presidency, the Central Provinces the Rewah Native State, and districts Mirzapur, Benares, Ghazipur and Gorakhpur of the North Western Provinces The total Tree of this jurisdiction is 193 §81 square miles, inclusive of 38 379 square miles belonging to the Native Feudatory States connected therewith

Topography &c

Broadly speaking the chief characteristics of these extensive provinces are, the plain of the Lower Ganges sloping from the north west, the plain of the Lower Brahmaputra from the foot of the Garo Hills, sloping due south and the great Delta of Bengal On the south west of these great plains rise the high lands of Chota Nagpore and Orissa, on the cast are the Chittagong, Tipperah Garo Khasi and other hills on the north is the hilly Darjeeling District and the Bengal Humilayas

Bengal Proper is the great alluvial and deltase plans between the Himalayas and the Bay of Bengal

Behar is the Gangetic plum lying between Bengal proper and the North Western Provinces. In Behar is also included a narrow range of hills in the Sonthal Pargunas, known as the Ray takal

Clota (or Chutta) Nagrore is the elevated and hilly country west of Bengal Proper, south of Behar, and north of Orissa.

Ornsa comprises a long flat deluvial strip between the hills and the sea, (forming one settled province) and a large hilly tract beyond occupied by tributary states.

The greater part of Bengil Proper and Behar are uninterrupted flats subject to in undation, rich in black mould and most fertile, the Dacca Division being so fertile that it has been called the granary of Bengal

Turning to the mountains we have in the small part of the Himaliyan chain coming within the Bengal jurisdiction elevations varying from 7 000 feet above the ser at Darjeeling on the south, to lofty Kanchinjing? 8 000 feet on the north west. The Raymahal hills

in the Southal Purganas, ending with the town of that name on the Ganges, form the eastern projection of the Central Indian formation running through the Chota Nagpore province, which is hilly throughout. Several broken detached hills, some of considerable height appear as irregular links of the main chain, the largest of these is Parasnath using to a height of 4 488 feet above the sea. A continution of the same Central Indian formation runs through the tributary states of Orisas, with varjang elevations of from 2 000 to 4,000 feet above the sea. On the east, the mountainous tracts of Hill Tipperah and Chittagong are a continuation of the Manipur and Lushai ranges, with elevations rusing to 11 and 12,000 feet

The Ganges river touches the Behir Province at Burar, on the East India Railway, and enters it near Chupra, where the Gogra from the north meets it. It then receives the Soane on the south, and the Gundak and k.osi again on the north, all rivers of considerable volume. Turning the corner of the Rajmahal hills, the Ganges flows with its great set body of water in a sputh easterly direction, when the Britgeritt first flows any from it on the west side to form the Hooghly, the most navigable of its many mouths. The main stream continuing its course, and throwing off several channels to form the Delta, meets the main stream of the Brahmaptura (Rown here as the Januara) at Goalundo, the termi nus of the Eastern Bengal Railway, the analysmated column then empties itself by numerous channels into the Bay of Benzal

From these rivers the Gangetic Delta is formed Between the cultivated portions of this Delta and the set is a tract bearing the general name of the Sundarbans, covered with dense forest and which, owing to the inroads of the sea and wild beasts, is well as its general unhealthiness has baffled the enterprise of modern man. The area of this tract is about 5,340 square miles

The other rivers of these provinces are, on the cast, the Megna (called in its dipper counter the Surma), which is the high road to Cachar as it affords good writer communication for the greater part of its length, the Fenny, rising in Hill Tripperah and the Karnafuli rising in the highlands of the Lushai country The two last flow into the Day of Beneal

On the west of the great Gangetic Delta, not helping however to form it, but joining the Hooghly between Calcutta and Suggor Island, are the Damuda, the Rupmarain and the Cossye, all rising in the highlands of Chota Narpore

The Subaranrekha also rising in Chota Nagpore, the Baitarni and Brahmani, rising in the highlands of Onssa and the Mahanadi rising in the Central Provinces, flow cist wards into the Bay of Beneal

The East Indian Railway runs through the middle of these provinces from Calcuita up to Buxar, a portion of it from Kanoo Junction running due north, and then turning due west joins the line again at Lakhiseria, this portion is called the "I oop' line, to distinguish it from the straight or "Chord' line connecting these two stations. The Trihoot State Railway (82 miles in length) runs from Barh on the East Indian line to Trihoot, with a branch to Durbhan, ahd. The Nulhari State Railway (27 miles in length) branches off from Nulhari station on the East Indian Railway to Atingray. The Dastern Bengul Railway (12 miles in length) uns from Calcuitt to Godulindo, tapping the Eastern Districts of Bengal, while the South Eastern State Railway (28 miles in length) connects Calcuit with Port Criming. The Northern Bengal State Railway (219 miles in length), tapping the principal jute, rice and tobacco exporting districts of Northern Bengal and the tea growing country at the foot of the Humslay is leaves the Lastern Bengal and the tea

Portida station, and after crossing the tiver at Sara runs to Siligon, 30 miles from Dir geeling*, a branch line from Parhattipur station runs to Rungpore to be eventually extended to Dhubin. The Gya State Railway (57 miles in length) branches off from Patna city, on the Last Indian line, to the town of Gya.

The Grand I runk road runs direct from Calcutta to Benares and is the great highway for truffic in those portions of Behar and Chota Nagpoie not having Railway communication. In the Deltaic country of Bengal, water communications much availed of, hence Bengal Proper is not so well supplied with roads as the other Bengal Propers.

The Canals of these provinces he principally in Orissa and Behar The Orissa scheme is it is termed, embraces the Kendrapara canal with branch to Gundukia on the Gobri river, length 39 miles, irrigating about 100,000 acres The Patamundi branch. length 40m iles, the Taldanda (27 miles) and Machgong (30 miles) canals, irrigat ing about 50,000 acres, the High Level canal for impation and navigation, running from Calcutta to Cuttack via Midnapore, a length of 52 miles The other canals are, the Midnapore canal connecting Midnapore with tide water in the Hooghly at Oolaharia, 16 miles below Calcutta, having a navigable length of 53 miles, the Tidal canal length 28 miles, connecting the rivers Hooghly. Haldi and Russulpur in the Hidi elecportion of the Midnipore District, the Soane canals for the irrigation of South Behar, to be extended eventually to Mirzapore on one side and to Monghyr on the other, with branches and distributaries in the districts of Shahabad, Gya and Patna, the Arrah canal, 65 miles . the Western main canal, 22 miles , the Patna canal, 861/2 miles , and the Buxar canal 45 miles. This or extensive shallow lakes are very numerous, but their limits are centrally ill defined. The most extensive and remarkable are the Monda Ihil the Dulaburi that and the Chullam that in the district of Raishahve, the Aka that in the district of Tessore and the great Thil in the district of Backergunge.

Climate

Although these four Provinces, (Bengal Proper, Behar, Chota Nagpore and Orissa) under the Bengal Government are situated for the most part without the Fropical Zone, their climate is characteristically tropical. In the annual range of their temperature, as well as in point of humidity and rumfall, the eastern and western portions of the whole country which includes them, are strongly contrasted. The mean temperature of the whole year is 8.º in Orissa and Behar, and 73° in the Chittigong and Dicca Divisions In Orissa and the western part of the Gangetic Delta, December is the coldest month of the year, elsewhere the mean temperature of January is somewhat lower rains the temperature of the Hazaribagh plateau falls more rapidly than that of any other Between May and October the fall at Hazaribagh is rather more than 11, while at Berhampore in the Delta, and in about the same latitude, it is only 41,4, and at Calcutta a little more than 3°, even at Paina it does not exceed 8° The high humidity of the atmosphere in Bengal Proper, and more especially in its eastern districts has become proverbial. The average annual humidity of a large portion of Bengal is how ever sensibly lower than that of Lubland | The quantity of vapour in the air of Calcutta is on the average of the year about twice as great as in that of London liumidity of the atmosphere is greatest on the coast of Orissa and the Sundarbans and diminishes inland as the distance from the sea increases. In the cold weather and spring months, this decrease is rapid everywhere except in Eastern Bengal

^{*} Note -A company for the purpose of constraing maintaig and work gas can answay be ween the terminus of the Nothern Bengal Tate Kailway at \$150 and the latin of Dayten has been started with Go emment and

58 The districts of Eastern Bengal, more especially those of the Chittagong Division show the heavest rainfall. In this division the average annual fall almost everywhere amounts to unwards of 100 inches. In the Danieling and Jalnaiguri districts, on the

errossed hill flanks and at their base, even this large amount is greatly surpassed. The rainfall is also higher on the plains of the coast, than on those lying more inland. By far the greater part of the rainfall of the Province falls between the months of Time and October showers also occur in the hot weather months, and in the months of February and March hall storms are not unfrequent. In the eastern districts rain occurs occasionally in the cold weather months, but is less common in the Delta and the country further nestward. During February, March. April and May the prevailing wind is from the south. The climate of Orissa is by no means as healthy as the other portions of these provinces. The climate of Rehar and of Chota Nappore is not unlike that of the North Western Proxinces in its eastern districts, while that of the Rengal Delta or Bengal Proper may be summed up as follows for the different months of the year -" January-Air serence and cold Winds N and N W For in early morning and heavy dews at night. Thermometer minimum 58° maximum 76°, mean 67° February -- Pleasant and cool till the middle. Wind then changes to Sand S E. Thermometer 6s° to 83°, mean 74° March—The hot season begins, the sun is powerful and the days warm. Strong winds from the south. Storms from the N.W. towards middle, and end, accompanied, by violent gusts, with clouds of dust. followed by rain Thermometer 74° to 86°, mean 80° April South wind moderating the heat till the 20th, when the wind becomes hot sometimes. Thunderstorms and rain. Thermometer 79° to 91°, mean 85° May-Very disagreeable. Air close, still and oppressive Nights very sultry, wind light and from south, but storms frequent with thunder and rain Thermometer 81° to 93°, mean 87° June to September—This is the rainy season. In the second week of June the wind yeers round to the cast and after several days of close mucey weather, the rains commence and continue with little intermission till October The atmosphere during these months is cooler and the weather is generally pleasant, but the damp is extreme and everything gets mouldy. Thermometer 78° to 00°, mean 84° October - Is a variable month The rains are breaking up and the winds changing The days are sultry, but the mornings and evenings are cool, the air becomes clear and night dews recommence. Mean temperature 79° November-delight fully fair and pleasant. Cold sharp winds blow from the North West. The air is dry, nure, clear and calm with no clouds Mean temperature 74° December-Days clear and fine, but fogs at night and early morning. North and west winds prevail, blowing sharply Thermometer 58° to 78°, mean 68°.

Staples and Manufactures.

Rice, the principal food grain of the people, is cultivated and consumed over the whole of Eastern, Western, and Central Bengal and Orissa, and these parts are the prin cital rice producing tracts. The coarse rice is usually consumed locally, while that grown in winter and spring is exported In Behar and Choia Nagpore also, rice is a main staple of food though alternated with wheat, maize and other cereals Dall (pulses) of various kinds, and fruit and vegetables, of every description, form an invariable part of the food of the people throughout these provinces.

The commercial staples are jute, hemp, oilseeds, ginger, turmeric, cotton, cocoa nuts, date sugar, tobacco, sugar-cane, betel nut, betel leaf, indigo, tea, silk, opium, lac, lacdye, safflower, saltpetre, cinchona and specacuanha. Next to rice, jute forms the staple product of the country The Districts of Bengal which grow it most largely, are Rungpore, Mymensingh, Bogra, Dacca, Pubna, Dinagepore, Hoogly and 24 Pergunahs, the best quality coming from Rungpore and Mymensingh. Seraganj is one of the principal marts for this staple. The manufacture of date sugar is very extensively carried on in the deltate districts of Jessore, Nudden, Turreedpore and 24 Pergunnahs. Tolacco is Integly grown in Rungpore, Turhoot and Purneah for trade and export. Ten is cultivated to a greater or lesser extent in Dacca, Darjeeling, Jahaiguri, Chittagong and Chota Nagpore. The following statement gives further particulars in regard to the tea cultivation in Bengal, in 1878.

Indigo is largely cultivated in the districts of Nuddea and Jessore, over the whole of Central Bengrl, in Purneah, and westward throughout Behar north of the Ganges, and constitutes the principal industry of these parts. In Behar south of the Ganges, the cultivation is very small, and in the Chittagong, Orissa and Chota Nagpore divisions it is not grown. The cultivation of opium is a Government monopoly and is principally carried on in Behar. Silk is a principal industry over a considerable part of the Rajshahye and Burdwan divisions. Cinchona and Ipecaeuanha are produced in the Darjeeling district. All over these provinces the manufacture of beads of sorts and wicker and basket work are very generally spread occupations, and the usual local handrafts are carried on, for the supply of local demands. Weating and the manufacture of cotton thread are the occupation of a large number of the inhabitants of every district.

. The different manufactures which are specially carried on in the several divisions of the Bengal Provinces, and for which each part is most celebrated, are summed up as follows:—

Burdwan Distrion.—Silk, indigo and metal pots and pans Lac, rope and yarn factories. Screw-presses for cotton, jute and fibres. Steam, flour, paper and jute mills. Iron foundries.

Presidency Drision.—Indugo and date sugar are the staple manufactures in this division. The others are cotton-cloth, shell lime and brass utensils. There are also several jute and cotton mills and screw-presses, as well as other factories and foundries.

Rajshahje Drusson.—Silk and indigo are the principal manufactures, the others are

silk cloth, brass utensils, gunny bags, gold and silver filagree work and ivory articles.

Data Division.—There is no manufacture on a wholesale scale in this division.**

except tea and indigo; cocoanut oil and date-sugar are made and exported to Chittagong and Calcutta. The other manufactures are brass and iron utensils, lacdy, soap and paper.

Chittagong Division.—The principal industries are carpentry, ship and boat building, blacksmith's, brazier's, gold and silversmith's work.

Patna Division.—The principal manufactures are indigo, opium, saltpetre, sugar, and sugar candy. The minor manufactures, are towelling and table linen, tobacco, paper, blankers and brass utensils

Bhagalpur Division .- The principal manufactures of this division are indigo and silk.

cabinet ware, fire arms and hardware, baskets, inlaid and fancy work are the other in

dustries

Outsia Division —Salt manufacture is the staple of this division Brass vessels, brass and silver organization and coarse cloths are the chief articles made

Chola Nagpore Duisun -- Coarse cloth, soapstone vessels, tusser silk, lac and tea are the chief articles manufactured

Of the mineral resources of Bengal, coal only has been largely developed. Iron, however, is at least as abundant as coal in many places and is found in the closest con junction with coal in large tracts where limestone is also plentiful. The largest and best coal mines of Bengal are at Raneegunge in the Burdwan District, and in the Chota Nag pore Drisson, where there are great stores of coal for future ages. Coal is also found in the Sonthal Parganas, but of a poorer description. Lead, silver and copper are found in Bhagalpur, and stone quarties are worked in the districts of Monghyr and Gya. Little is known of the mineral resources of Darjeeling. Petroleum and coal are spoken of as easting copper and limestone are known to exist. Iron ore has been discovered in the Salmof Hills in Thyperah, and coal in the Chitatgong Hill Tracts. Throughout the delta and low lying alluvial tracts comprising the Presidency, Rajshahye and Dacca Drissions, and alluvial country of Orissa, there are neither mines nor minerals. In the hilly tracts of the tributary mehals further inland, there are valuable beds of iron ore, particularly in Talphree, where iron and coal are found side by side. Rich iron ore is also found and worked extensively by natives in the Orissa States of Dhenkanal and Keonphar

Form of Administration.

The Lieutenant-Governor is the chief executive authority in these provinces, which for administrative purposes have been divided into nine divisions, embracing 43 districts, each division being under the superintendence of a Commissioner, and each district under a District Officer, who is the unit of executive administration whether in the Regu lation or Non Regulation districts, and who, in the one case, is styled Magistrate and Collector, and in the other, Deputy Commissioner The District Officer is the executive chief and administrator of the tract of country committed to his charge, and is supreme in the district, except in so far as regards the proceedings of the Courts of Justice. Fach district is again subdivided into taksils or sub divisions, under subordinate magisterial and revenue authorities, styled Sub divisional Officers, who are either Assistants or Magistrates in charge. Sub divisions are again divided into thanas or police circles, where there are also Sub Deputies to strengthen the executive influence of Sub-divisional officers. In revenue matters, the Commissioners of divisions are in their turn subject to the Board of Revenue, in other matters they are directly under the Lieutenant Governor The legisla tive authority in Bengal is the council of the Lieutenant Governor, for the purpose of making laws and regulations The Lieutenant Governor is president of this council, and before any law comes into force, it must have received the assent of the Governor General as well as that of the Lieutenant Governor The Marine Administration is under a Master Attendant, and the affairs of the Port of Calcutta, are entrusted to Port Commissioners. The Judicial organization of the whole of these Provinces is entrusted to Judges, subordinate to a High Court, whose functions are exclusively judicial

Calcutta has a special administration of its own, with a separate establishment of Police under control of a Commissioner, also Magistrites of Police for administration of criminal justice. The affairs of the Municipality and Municipal Taxation are managed by a Chairman and Board of Justices, while the Customs and Stamps are under the subernitedence of a Board of Penson.

Census

The Census of Bengrl which was effected in 1871 7° was the first census of the country that Ind ever been attempted. The computation grave 60 357 141 as the total number of persons under the Bengrl Adm a stration far exceeding that of any previous estimate and slowing an average density for the whole of the four provinces of 389 per sons to the square mile. In the United Kingdom the density is 262 in Germany 189 in Iranice 180 Separately the density for Bengal Proper is 481 for Behar 46° for Chota Nagiore 141 and for Orissa 377 per square m le The total population for the four provinces is classified as follows—Christians Europeans 17 387 Eurasians 21 410 Natives 55-97 Hundius 38 843 179 Mahomedans 19 559 017 Others 1860 851. The sexes are pretty equally divided priticularly in Bengal Proper

BRIEF GENERAL DESCRIPTION

Area, Position, Boundaries, &c

The Province of Assam lies on the north east extremity of the Indian Empire, with Burnand Thibet beyond it on the north, and Burmah on the east, and between Latitudes 28° 15 and 24° a North, and Longitudes 89° 45 and 99° 5 East, and has an area of 54,731 square males The immediate boundaries of Assam are, on the north, Bhu tan and the range of hills inhabited by savage sub Himalayan tribes. On the north east are the Mishimi Hills which sweep round the head of the Brahmiputra Valley. On the east, are the mountain ranges of the Burmese frontier, and intervening hills inhabited by unsubdued wild tribes, the Patkoi range and Manipur Native State. On the south, are the Bengal districts of Mymensingh and Tipperah, with Hill Tipperah Native State. On the west, it is bounded by the Bengal districts of Rungpore, and Jalpaiguri, and the Native State of Cooch Behar.

The outer boundary on the north of districts Gealpara, Kamrup and Darrung has been accurately laid down and defined, beyond this the outer line of boundary of districts Nowgong, Lakhmpur, Sibasgar, Naga Hills and Cachar, touching upon the hills of the adjoining wild tribes, is indefinite, another line of boundary, known as the 'Inner line', has therefore been laid down for these districts, with the object of restricting the deal ings of Europeans and other British subjects with the wild frontier tribes no person being allowed to cross this inner line without a pass

Topography, &c

The Province comprises the two valleys of the Brahmaputra (the son of Brahma) and Surma tivers, and the central hill tracts of the Garo Hills, the Khasi and Jaintia Hills, and the Naga Hills, which separate them

Assam Proper, or the valley of the Brahmaputra, is a long alluvial p'ain about 450 miles in length, and of an average width of 50 miles, shut in by mountains on the north, east and south. The river Brahmaputra flows throughout its entire length, and a little above Dhubri bends abruptly to the south, continuing its course to its confluence with the Ganges at Goalundo, the present terminus of the Eastern Bengal Railway Lattle

is known of the upper course of this river, which has been generally identified with the Sangpo or Narichu Sangpo of Thibet. In Assam the Brahmaputra is navigable by river steamers and large cargo boats as far as Dibrugarh at all seasons of the year, and in the runs by steamers even as far as Sadiya, a hundred miles further up, much beyond this place it is not navigable owing to the ripidity of the current. At Goalpara, the discharge during its lowest ebb amounts to 146 200 cubic feet per second, during the runs it attains a height of from thirty to forty feet above its common level, the discharge then has been computed at four times the above quantity

The valley of the Surma or Barak river comprises the two districts of Sylhet and Cachar On the north this valley is shut in by the Khais Jaintia and Naga Hills, on the east by the Manupir Hills, and on the south by the Lushai and Tipperah Hills. The west ern and eastern portions of this valley differ considerably in their physical features the western portion, comprising the district of Sylhet, is for the most part a large alluvial plain averaging some seventy miles in width, and traversed by numerous streams and water courses which during the rainy season from June to October, flood the country In the eastern portion comprising the district of Cachar, the valley narrows. The Surma river, (uniting ultimately with the Megna in Bengal), rising among the mountains to the north of Manupur flows for about 180 miles through a mountainous country, and becomes navigable only in the plains portion of Cachar:

The Central Hill tructs of the Naga Hills the Khasi and Januta Hills and the Garo Hills, are a continuation of the mountainous chain which sweeps round the head of the Brahmaputra valley Each range has marked physical features of its own. In the Naga Hills the main ridge, named the Barail, with its ranges and spurs, is remarkably precipitous in character and towers to a height of 10 000 feet above the sea level. The peculiar features of the Khasi and Jainta Hills is the abruptness with which they rise on the southern face, almost perpendicularly from the Surma valley, attaining rapidly an altitude of over 6 000 feet, the upper plateaux and main central tracts consisting of a succession of undulating downs covered mostly with short grass. The hill station of Shillong the seat of Government is situated about the centre of this tract. The Garo Hills terminate this chain and present very similar characteristics, being steep and precipitous on the southern face and of rather lower general elevation, the highest part being not more than 4 700 feet above sea level, and below which Tura the capital is situated.

Climate and Sanataria

The climate of Assam is superior to that of Bengal, the day heat being more mo derrite, and the nights being always cool and refreshing. The climate of the hill districts in the higher and central plateaux is very salubrious, and the seasons throughout the province are generally favorable for agricultural operations.

At Shillong the average maximum temperature is about 62°, the minimum 59°, the general mean being about 61°. The average mean summer temperature in the valless of the Brahmaputra and Surma (or Barak) rivers is 80°, the winter temperature about 57°, the annual mean temperature being about 70°.

The rains are of long continuance, lasting from March to October, and cloudless skies, proterbally characteristic of India, are but little seen in this province. In the Irahmaputra valley, the morning fog which invariably prevails in the cold season, is a special characteristic, it rises about day light and often lasts as long as eleven in the fore noon. The annual rainfall at Cherrapoonjee and along the southern face of the Khasi

and Garo Hills, reaches 600 to 620 inches, incessant rain pouring sometimes for eight and ten days at a stretch

The prevalent winds throughout the year in both valle)s blow from the north east. At the commencement of the rains a westerly wind occasionally sets in, but tarely lasts for inj. length of time. In Cachar the north-east wind, which blows up to mid-day, usually changes to a south west wind in the afternoon. During the months of March, April and May violent winds from the north west are of frequent occurrence through out the Province.

At Cherripoonjee in spite of the notorious heavy rainfall the climate is by no means unhealthy. Earthquakes are very common both in the plains and hill districts, but the shocks are seldom severe. They occur chiefly in November, December and Jinuary. Shillong, in the khasi Hills, is the santarium of the Assam Province.

Staples and Manufactures

Rice is the principal food grain throughout the province. Next to rice the most im portin crop is the mustard, the other styples grown are pulses of various kinds, indian corn linseed hemp' jute, betel leaf (pan), betel nut sugar cane cotton, and tobacco Indigenous arrowroot, and tapioca have also been found in Sylhet. The principal products of the hill districts are, potatoes oranges pine-apples, bay leaves, cinnamon, black-pepiper betel nut und leaves honey, way, cotton silk, and caoutchouc, the three former uticles being largely exported.

The most important commercial staple is Ter which is largely cultivated in all the plain districts with the exception of Goalpara. The total outturn of manufactured ter from linds under tea cultivation at the present time, has been estimated at about 20 000 000 lbs. and the quantity exported is typidly increasing. The foundation of this richistiv was laid between 1846 and 1850. Coffee is midgenous and is also cultivated.

Assum is rich in mineral produce. Iron limestone and coal abound in all the hilly tricts. Petroleum springs have also been discovered, and gold has been found in many of the streams.

The common manufactures of the province are silk thread silk fabrics, coarse cloth, brass utensils, noty ornaments and ordinary agricultural implements. Sylhet is noted for its nory mats and fans and shell bracelets. There is no lack of materials but skilled labor and industrial energy are both deficient.

In connection with Assam the unnual fairs, held both on political and commercial grounds claim some mention here and are briefly described

1 The Udalguri fair, held in the Mangaldai sub division of district Darring, about to miles from the foot of the hills

This fur takes place commonly in February or March of each year, and lasts about two months. The articles brought down from the hills are —Ponies sheep, dogs, salt, gold, blinkets, yak's tails musk, chillies, spices, way, honey, madder, oranges and walnuts.

2 The Kerkaria Fur, held in February and March, and established by the Raja of Kerkaria in Bhutan, at a place on the Sukuii river, just beyond the border of the Darrang district, and about 15 miles north west of Udalguri.

3. The Daimara Fair, held about the month of February, at a place three miles beyond the British frontier, and distant about 25 miles in a straight line north-east of Udviguri

4 The Sadiya Fair, held at Sadiyi in January and February of each year. The imports at this fur are —Rubber, wax, mush, cloths, mats, dhaes and ivory. The exports are English and Assamese cloths, salt, brass ware, bell metal utensits, silver earnings, beads, brass wire and opium. Sadiya promises to become ultimately a place of considerable importance, as it must be the starting point of the as yet unknown route between Assam and China.

The neighbouring hill tribes resort in considerable number to these fairs, and a large

At Silchar too a fair is held in the months of December and January, which is largely attended by pony and cattle dealers from Manipur

Form of Administration

The administration of the Province is carried on under the Non Regulation \$35tem, and is entitisted to a Chief Commissioner, acting immediately under the orders of the Supreme Government. The constitution of the Chief Commissionership was effected under a proclamation dated the 7th February 1874, the district of \$3\text{lhet being added to the Province from Bengal, by a proclamation dated the 12th September 1874. The Chief Commissioner has ordinarily the powers of a local Government, and exercises complete control over all departments and branches of the administration. The immediate and responsible representative of the authority of Government in each district is the Deputy Commissioner, who is assisted by Assistant and Extra Assistant Commissioners, to whom is allotted such parts of his duties as they are empowered to perform. In the Naga Hills district the Chief Executive Officer is called "Political Officer' in charge of the Naga Hills."

Recently a Commissioner has been appointed for the eight valley districts of this province, who is also a sessions Judge, and the channel of communication between the District Officers and the Chief Commissioner, and to whom the Deputy Commissioners of the valley districts are in certain matters subordinate.

Census

The last Census of 1872 showed a total population of 4,129,972, but it was not fully them in the Naga Hills and in the outlying parts of Lakhimpur, while no census was even attempted in the Garo Hills, the figures given being merely estimated

Excluding Sylhet and Cachar, the average number of persons per square mile for the renauder of the entire province is 63. In calculating the Christian population, the Native Christians in the Khasa and Jamia Hills have not been taken into account

Considering its small population, Assam presents greater varieties of race than any other province. The sexes are pretty equally divided

The tribes bordering on the Province are the following -

On the North	On the East	On the South
t The Chutlas The Akhas The Paffas The Daffas The Mass The Mass	6. The Muhamus. 7 The Mhamus 4 8 The Sngphos	9 The Nagas 10. The Mik rs 11 The kuk s 12 The Lushaus. 13 The Sylus. 14 The Howlongs 15 The Shadoos.

[.] The three list named inbes are class of the kuku or Lushaus they border the Cl nizating and Arrakan Hall Tracts.

BRIEF GENERAL DESCRIPTION.

Area, Position, Boundaries, &c.

The Central Provinces occurv a vast tract of country in the centre of the Peninsula of India: they lie between the 18th and 25th degrees of North Latitude and 26th and 86th degrees of East Lontitude, and stretch from Bundelkhand in the north to the Madras Presidency in the south, and from the frontier of Bengal in the cast, to independent Malwa and to the Deccan in the west. The extreme breadth from north to south is about con miles, and length from east to west about foo miles. The area of the whole tract so named is 112.012 source miles, of which 84.208 square miles are British territory. and the remainder, 28.815 square miles, the territory of Teudatory Native Chiefs They are bounded on the north by the independent native state of Rewah, and states, of Burn delkhand of the Central India Agency; on the west and north-west by the British district of Lahtnur of the North-Western Provinces, by Bhonal and Indore native states of the Central India Agency, the British district of Khandesh in the Bombay Presidency and by Bergr, or the Hyderabad Assigned Districts, on the south and south-east by the Nizam's dominions, the Jeypur native state and the Gamam district of the Madras Presidence : on the east and north east by the tributary states of Orissa and the Garbiat states of Chota Nagpore in the Bengal jurisdiction. The Central Provinces are therefore enclosed on nearly every side by foreign territory, and are thus cut off geographically from other nurely British provinces

Topography, &c.

Geographically the Provinces are divided into two parts by the Satoura range of mountains that runs south of the Nerbudda river from east to west. This range embraces within itself considerable tracts of table land. Commencing at the lofty plateau of Amarkantak, the range extends westwards as far as the western coast. From Amar-Lantak an outer ridge runs south-west for about 100 miles to a part known as the Salitekri Hills, thus forming as it were the head of the range, which, narrowing as it proceeds westwards, changes from a broad table land to two parallel ridges bounding on either side the valley of the Tapti, ending so far as these provinces are concerned, at the famous hill fortress of Asirgarh. Beyond this point the Raipipla Hills, which separate the valley of the Nerbudda from that of the Tapti, complete the chain as far as the Western Ghats. The mean elevation of the range is about 2,500 feet, but many of the peaks and some of the plateaux have an elevation of more than 3,500 feet above the sea. The plateaux of Amarkantak and Chauradadar in the Mandla district rise to a height of nearly 2,500 feet : the height of the hill of Khamla in the Betul district is 3,700 feet, and the general height of the Chikalda hills overlooking the Berar plain, is 3,700 feet, while the Pachmarhi bills, east of Betul, rise abruptly from the Nerbudda valley and culminate at Dhupgarh, at an elevation of 4,500 feet. East of Asirgarh there is a break in the range through which the railway from Bombay to Allahabad passes, as well as the road to Central India, and at which the elevation is not more than 1,240 feet above the sea. West of Asirgarh the range is continued to the Western Ghats by a belt of mountainous country 40 to 50 miles in breadth with an average height of about 2,000 feet above the sea, some peaks however rising up to 3,000 and 4,000 feet. The whole length of the Satpura range is scarcely less than 600 miles, while its breadth at the head across Balaghat and Mandla is about 100 miles. On the table lands of this range, east of Asirgarh, he the districts of Betul, Chhindwara, Scont, Balaghat and Mandla.

North of the Satpura range, offshoots of low hills stretch northwards and approach the Khamur Hills, which with the Bhanrer Hills (both branches of the Vindhyan range), form the eastern scarp of the plateau on which lie the districts of Damoh and Saugor, these ranges attain a height of 2,500 feet

Eastwards from Amarkantak to within a few miles of the eastern coast of the Penin sula of India, stretch a succession of ranges of hills, offshoots of the Vindhyan chain, separating the plain of Sambalpur from Chota Nagpore

To the south the provinces are shut in by the wide mountainous tract of Bastar, stretching from the Bay of Bengal to the Godavari river, and extending from the west of that river up to the rocky ridges and plateau of Khandesh, and enclosing the plain of Berar along its southern border

The plain country of the province may be said to lie in two great divisions to the north and south of the great central range of mountains. North of the Satpuras we have the rich valley of the Nerbudda, extending from the Jubbulpore to the Hoshangabad and Nimar districts, a distance of nearly 350 miles, the elevation of this valley falls from 1,400 feet at Jubbulpore to 1,120 feet at Hoshangabad. In breadth it is about 30 miles This great plain is most fertile and is cultivated with wheat, cotton and sugar cane. South of the Satpuras and the ranges that run eastwards, we have the plain of Sambalpur with all its Native states and Zamindaris extending over an area of some 23,000 square miles, and which may be considered the central basin of the Mahanadi Separated from Sambalpur by ranges running southward from the great central chain, lies the plain of Chhattisgarh, having a mean elevation of 1,000 feet and an area of about 22,000 square miles, and forming the upper basin of the Mahanadi. Further to the west, and again divided off by hills, is the great plain of Nagpur, extending over some 21,000 square miles The general surface of this last plain inclines towards the south, from 1,000 feet above the sea at Nagpur, to 750 feet at Chanda, the eastern portion being drained by the Wain ganga, the western by the Wardha

The principal rivers which with their tributaries drain this wide region are the Nerbud da, which, rising in the high table land of Amarkantak, and pursuing a direct westerly course for 500 miles to the Gulf of Cambay, receives the whole drainage of the northern slopes of the Satpuras, this river is almost everywhere fordable in the hot season, the Mahanadi, rising in the wild mountains of Bastar that close in the Chhattisgarh plain to the south, the Wainganga rising in the Seoni plateau, and draming the southern slopes of the Satpuras west of Mandla, and also the greater part of the Nagpur plain, the length of this river from its source to its junction with the Wardha is about 350 miles, the Wardha rising in the Satpuras between Nagpur and Betul, and separating the districts of Nagpur, Wardha, and Chanda from Berar and the Nizam's dominions These four great rivers are navigable for long distances during the rains, and they flow in deep beds many feet below the level of the countries which they drun

Generally, the Central Provinces may be said to be a mountainous country, in which hill and plain, plateau and valley alternate with each other. The slopes on both sides of the great central ranges are covered with dense forest, but in the other parts of the provinces the absence of this forms a characteristic feature of the scenery

Several lines of railway run through the Central Provinces The Great Indian Peninsula Railway, main line, enters the territory at Burhanpur, in the district of Nimar, terminating at Jubbulpore, where it connects with the "Jubbulpore Extension of the East Indian Railway, which enters the provinces at Undarra station, the Nagpur branch of the Great Indian Peninsula line branches off from it at Bhosawal, and after traversing Berar, reaches Nagpur, after throwing off a branch line at Wardha station to Warora, £cd Hingan ghat, a length of 45 miles, called the "Wardha Valley State Railway The Holkar State Railway to Mhow and Indore, branches off from Khandwa station of the Great Indian Peninsula line, while a small branch from the Gadarwara station of the same line connects the town of Mopani The extension from Nagpur to Kaliani, a distance of 125 miles, called the "Nagpur and Chhattisgarh State Railway" is, now under construction and progressing rapidly

Climate and Sanataria

A hilly country, such as has been described lying within the tronics and at a consider able distance from the sea, would naturally have a hot and dry climate. The tempera ture is to some extent, however, modified by the general elevation of the country. The south west monsoon, which prevails from the end of June to the beginning of Septem ber, usually brings with it an abundant rainfall, and the wide tracts of forest that cover a part of the area of the provinces, retard evaporation. But notwithstanding these mode fring influences, the marked characteristics of the climate for nine months of the year. are a high temperature and a low degree of humidity. The districts above the Satpuras have a temperature more nearly approaching that of the North Western Provinces, while the Satpura plateau districts, gave, from their superior elevation, a somewhat cooler climate. The hot season begins in April and lasts to the middle of June, the wet sea son then sets in and continues till the middle of October, while the cold season lasts from the middle of October to March inclusive. During the hot weather the heat at noon averages 100° Far In the cold season the mean temperature is 40° The mean annual rainfall of the Central Provinces is 45 inches, of which 41 inches fall during the monsoon or wet season, from June to October The arrival of the monsoon occurs with great uni formity over the whole country, usually about the middle of June. The north easterly and easterly winds set in in October and continue steadily in this direction through November and part of December, when they slacken but continue blowing until the begin ning of February in February and March, the wind is variable but southerly winds are most frequent, the north west wind continues from April till June, when, the monsoon setting in, the general direction is west and south west. Pachmarhi, situated in the Hoshangabad district, is the Sanitarium of the Central Provinces

Staples and Manufactures

The ordinary natural productions are cotton of the finest quality, rice, wheat, maize, millet, oil seeds, opium, sugar cane, safflower and indigo
Central Provinces lies on the left bank of the Wardha river, on which bank the well known cotton mart of Hinganghat is situated Lac abounds in the forests, which swarm with wild animals of the kinds found elsewhere in India. The mineral resources include iron ore, coal, marble and building stone, gold and diamonds. The forests contain valuable timber trees and plants yielding drugs, resins, gums, and dyes

There are no manufactures peculiar to the Central Provinces except perhaps the tis sue work of Burhanpur, and the tighly emborodered wearing apparel manufactured in parts of Naspur and Brandari. The ordinary manufactures are wearing iron smelling and shaping the same into agricultural implements

Form of Administration

The administration of the Central Provinces is carried on under the non regulation system, by a Chief Commissioner in direct subordination to the Government of India, the Government resolution constituting the Chief Commissionership being dated and November 1861. The Chief Commissioner has ordinarily the powers of a local Government, and exercises complete control over all departments and branches of the administration, the courts, Civil and Criminal, being separately controlled by a Chief Judge under the name of Judicial Commissioner. For administrative purposes the Central Provinces are divided into four divisions, each controlled by a Commissioner, and subordinate to Commissioners are 19 Deputy Commissioners, each holding executive charge of a district. In every district there are two or more subdivisions, the direct management of each being entrusted to a native Sub-collector called a Tahiildar. There are so such subdivisions in the 10 districts of the Central Provinces.

A general census of the population of the Central Proxinces was taken on the 25th January 1872 This was the second regular census, the first having been taken in November 1866 The total area being 113 043 square miles, and including the Feudatory States, the population according to the new census, 10,304,070, the number of persons per square mile is 90 5 If, however, the Khalsa or British Territory be separated from the Feudatory states, the figures are —

Census

The entire population in 1860 was 9,104,511 soils. The recent census gives an increase of 1,198,559 or of 2 04 per cent in five years. The sexes are nearly equily divided.

The census of 1872 was in every respect more detailed and complete than the enumeration of 1866, and is sufficiently accurate for all statistical purposes The population of these provinces is classified as follows —10,487 Christians, 210,965 Mahomedans, 6,518,137 Hindus, 36,651 Parsis, Buddhists and Jains, 2,444,994 Aborigunes, and others

BRIEF GENERAL DESCRIPTION

Area, Position, Boundaries, &c

The Province of British Burmah extends along the eastern shore of the Bry of Bengal, and less between the parallels of 22 o and 10 o North, and longitudes 92 10 and 99 30 East, the extreme length of this stretch of country being about 1,000 miles, and the total area 87,456 square miles, of which about 4,000 only are cultivated It is bounded on the south and west by the Bay of Bengal, and a part of the Chittagong distinct of Bengal and on the north and east by the independent kindows of Burmah and Siam.

The province is composed of the tracts of Arakan, Tenasserim and Pegu Arakan and Tenasserim were ceded to the British Government after the first Burmese war of 1825 26, while Pegu was not unneved to the British dominions until after the second Burmese war of 1852

The portion known as the Kareng Hill Tructs, is a division of the Toungagoo district, it was formed in 1876, and lies to the castward of the Sittoung river

Topography, &c,

The British Burmah Province is geographically divided into four portions, rvz—

Artakan, stretching from the Nard estuary, (which separates the province from Chittagong),
to Cape Negras—The Vailleys of the Irrawad by and Sittoury rivers, separated from
Arakan on the west, by the Arakan Yoma range of hills, and from each other by the Pegu
Yoma range, of The Valley of the Saturean and *Transserine, which last is a narrow strip
like Arakan reaching down to the Pakchan stream, and separated from Stam by a lofly
chain of hills running north and south, nearly parallel to the coast, and about thirty of
forty miles inland, but approaching nearer to the sex at its southern extremity. A large
portion of British Burmah consists of mountainous tracts, almost wholly uninhabited, and
of impenetrable jungle

The Arakan portion, from the Naaf estuary to cape Negrais, is bounded on the north and east, by the high chain of mountains extending in a southerly direction from the south-eastern extremutes of Sjihet and Cachar, and gradually diminishing till it ends fifteen or sixteen miles south east of the rocky promontory of cape Negrais at Pagoda point. This chun, though of considerable height to the north, diminishes in allitude as it reaches Arakan, none of the passes across it, in that portion of its length, being more thin 4,000 feet above the sea, the Ayeng pass into the valley of the Irrawaddy is much less from the Nariestuary to Kyouk physoo harbour, the coast is a hybrinth of creeks and tidal nullahs, and from this point to cape Negrais, it is rugged and rocky, offering few hirbours for ships. This coast is studded with fertile islands, the largest of which are Cheduba, Shahpuri and Ramree

Owing to the nearness to the coast of the range which bounds Arakan, there are no large rivers, the principal ones are, the Naaf estuary about thirty miles in length and three miles broad at its mouth, shallowing considerably towards the head, the Nervo river, an arm of the sea extending more than fifty miles inland, and from three to four miles broad at its mouth, the Netasyn or Arakan river rising in the Lushai Hills, and havingbale for forty miles by vessels of three to four hundred tons burden, and on the right bank of which, close to its mouth, is situated the town of Akyab, the head quarters of the district of that name and of the Arakan Division. The approach to Akyab is dan gerous and difficult, the channel being natrow, and with only 3½ futhoms of water over the bir at low water. The other meers are the Talah, the Nages, the Sandorah, the

Tour, m_{eq} and the Gaa, the last named being 1 good haven for stemmers or vessels of from mine to ten feet drught. The soil throughout Arakan is alluvial, mixed in places with sand, the islands are of volcanic formation, and though rock, are fettile

The Valleys of the Irrawaddy, Suttoung and Salween revers are British territory only in their lower portions, the two first named unite and form an extensive plain stretching from cape Negrais on the west, to Martaban on the east. The water shed between these two streams is the Pegu Yoma range, terminating in low hills at Rangoon loung range, rising to a height of 7,000 feet, bounds these valleys on the east ern boundary line separating the British possessions from the territory of the King of Burmah, leaves the Arakan hills at a point called the "ever visible peak," and running due east, passes the river Irrawaldy at its 50th mile, and the Pegu Yoma range, forty three miles further on, thence, after thirty-three miles, it crosses the Sittoung river, finally losing itself in a desert of mountains thateen or fourteen miles further east. The plains portion of these two valleys is highly cultivated and the richest part of the whole province. Owing to the spurs thrown out by the Pegu Yoma range, the main valleys are divided into several smaller ones. A strip of country in the Sittoung valley on the west, about twenty five or thirty miles broad, is covered with dense jungle, which stretches down as far south as Shwegreng The coast line from cape Negrais to the gulf of Martaban is low and flat

The main rivers in this portion of the Province are the Irrawaddy, flowing from the frontier line for 240 miles to the sea, and the Sittoung, rising far north of British territory, which it enters just above Toungngoo As the Irrawaddy nears the coast it divides, con verting the lower portion of its valley into a net work of tidal creeks, its first branch, being sent off to the westward a little above Henzadah, flows past Bassein and enters the Bay of Bengal by two main mouths. This branch is navigable by large, ships for eighty miles, or as far as to Bassein, a port of some importance. After passing Henzada another branch flows off to the eastward, joining the Hleing river just above Rangoon river then divides and sub-divides till it empties itself into the sea by no less than ten mouths. The waters of the Irrawaddy commence to rise in March and continue to rise till September. (flooding the surrounding lowlands), when they begin to fall. The Irra waddy is navigable for river steamers as far as to Bhamo, 600 miles beyond the British frontier The velocity of its waters, when the river is full, is five miles an hour Sittoung is narrow up to Shwegyeng, below this place it widens, at first gradually then very rapidly, and at last flows into the gulf of Martaban. A bore, with a curling crest nine feet high, sweeps up the Sittoung river, its effects being felt at Shwegyeng other mers are the Hleing, rising close to Prome, and navigable for vessels of the largest size to some little distance above Rangoon, the Pegu and the Poezoondoung rivers, rising in the Yoma range, about fifty-eight miles above the town of Pegu, the Beeting, rising in the Poungloung hills, and entering the gulf between the Salween and the Sittoung, the Salacen, at the mouth of which stands the town of Maulmain , the Atlaran rising in the chain of hills that form the boundary between the kingdom of Stam and British Burmah, and the Gine which is navigable for about one hundred and eighty miles for small boats The Salween, though a large river is not navigable owing to its rapids.

The Yoma ranges are composed mainly of brown or grey slate clay, alternating with beds of sand-stone, assuming at times a basaltic character

The southern portion of this Province called *Transterius*, which includes the Moscos and the Mergus Archipelago, lies along the coast between 17, and 10 north latitude, and 15 bounded on the east, from thirty to forty miles inland, by a chun of hills in some

places 5 000 feet in height. The breadth of this chain at Martabin has never been ascertained, but near Tavoy it appears to be about forty miles wide, whence it gradurily narrows to ten miles near Mergiu. The coast line is very irregular and low for some miles infland, beyond which the surface of the country is mountainous, thinly populated and much intersected by streams. The chief rivers are the Tavoy and Tenasserim. The Tenasserim, named after the town, rises in about 15° north latitude and flow through a villey scarcely broader than its bed, it is navigable for about 100 miles. The mouth of the Tavoy river affords excellent anchorage for ships and vessels can anchorage for ships and vessels can anchorage the sound of the soil of the northern portion of Tenasserim is alluvial. Stratified sand stone is the prevailing rock interspersed with vens of quarty, in which crystals of great beauty are sometimes discovered. The chief formation of the small hills is laterite.

The communications throughout the proxince are mainly by water. A State Railway, 16 alley line, and steamers ply on the Irrawaddy between Thayetmyo, Prome, Mya noung. Henzada and Rangoon. There is steam communication from Calcutta vi? Chit also south to Tayoy and Mergur. A navigable canal connects the Pegu and Sittoung rivers, and a complete project for the 'Rangoon and Sittoung Valley' State Railway, to attract the whole of the trade with Karengnee and the Shin states has been submitted for sanction. The whole of the Silween Hill Tracts is a wilderness of mountains and it is through these hills that Shan Caravans come down annually to Rangoon and Maulmain, and except the routes used by them there are no roads over which Idean numbal can pass.

There are four large lakes or more properly lagoons which deserve mention, tiz, the Moo lake in the Henzada district two and a half miles across, the Lahgyin, the Kandangyee, or "Royal Lake" near Rangoon, and the clear water lake in the Bassein district

Climate and Sanataria

The climate of Burmah, though most and depressing for a part of the year, is cooler than India. In some of the forest tracts, during the monsoons, it is deadly, but on the coast and on the frontier, it is by no means unhealthy, and is much better adapted to the European constitution than any part of India. The registration returns show, that the deaths of children under five years of age, are in the proportion of 7785 of the total death rites the percentage of children under 12 years of age being 358 of the whole population. In its pluvial chiracter this province is most characteristic and remarkable. The rainfall varies considerably, from **18 inches at Sandoway to 50 inches at Thayet myo, the wet season lasting from May to October, during which time the rains are almost constant. Novemb**r, D cember, January and February are the cold months, while the hot weather lasts from February till the runs comin are again. The average tempera ture is greatly affected by the sea breeze. The thermometer ranges from 65° in winter to 90° its summer.

There are no sunataria in Burnash, many proposals have been made to found them on the high mountain ranges but, however pleasant they would be in summer, "they would have to be abandoned in the rains for not even natives could remain to take care of the buildings, so incredibly rapid and luxurous is the vegetition that the very next sear a forest would have to be cleared valy to find the houses again.

Staples and Manufactures.

The industry of British Burmah is almost exclusively devoted to agriculture. About 86 per cent, of the whole area of the province is devoted to rice, and only about 3 per cent. of the acreage to cotton, tobacco, sugar-cane, pepper, indigo and other produce, the cold weather crops of India being almost unknown here. The whole province is well adapted for a much more systematic and extensive production of many staples than the Burmese will ever take into consideration. Tobacco growing in northern Arakan is attracting notice. According to native calculations the average production of tobacco in Arakan is 370lbs. an acre, but experience has shown that the yield of properly cultivated ground would be Soolbs an acre. The tobacco producing soil is so rich that no rotation of crops is necessary, and beyond a little needing, the plantations require only occasional manual labor. The crop is sown in November and reaped in April. The largest tobacco growing district in Burmah is Thayetmyo Experiments have also been made in ter and coffee planting, but with little result, for although in many parts of the province the soil and climate are no doubt favorable, the difficulty of procuring the labor that would be required for these commercial staples has hitherto proved insuperable. Tea of very good quality grown in Arakan, is said to be worth about 3s a lb in the London market. The principal manufacturing industries are rice cleaning, timber sawing, silk and cotton weaving, boat building, and the manufacture of salt and gnapee, a Other manufactures are comparatively insignificant, though in preparation of fish some respects interesting, and in many instances by no means devoid of artistic ment. Cutch, used for dyeing purposes, is almost the only article manufactured for export At Rangoon, Maulmain, Akyab and Bassein, there are numerous steam rice mills and saw mills for cleaning rice and sawing timber for export

The metalliferous minerals of the province are confined principally to the Mergui and Tavoy districts of the Tenasserim Division, where lead, iron, copper and antimony are met with, as well as gold dust in the Shwegspein rure Petroleum is met with to some extent in the Akyab and Kyouk phyoo districts, and limestone in Kyouk phyoo, Bassein, Amherst and Thayetingo districts. Coal of inferior quality is found up the Tenasserim river in Mergui, and in the Thayetingo district.

No emigration takes place from British Burmah, but there is considerable immi gration. Shans from the Burmese and Chinese Shan states, and other laborers from Upper Burmah, come down in large numbers, by whole villages at a time, during the hariest season, after which they return, some few settling permanently. Laborers also come over in considerable numbers from Madras, Chitagong and Akyab to the southern part during the rice shipping season, but few remain after it is over

Form of Administration

The three divisions comprising the province of British Burmah, 122, Arikan, Pegu and Tensserim, from the time of their coming under British rule up to January 1862, were governed separately by their respective commissioners, under the control of the Supreme Government in the case of Pegu and Tenasserim, and under that of the Lieu tenant-Governor of Bengal in the case of Arakan. In January 1862, however these three divisions were amalgamated and formed into a Chief Commissionership (under Major General Sir Arthur Phayre) in direct subordination to the Government of India, the Chief Commissioner having the powers of a local Government, and exercising, as in the Central Provinces, complete control over all departments and branches of the adminis

tration, the courts being controlled by a Chief Judge named the Judicial Commissioner, appointed in January 1872

For administrative purposes this province is divided into three divisions, each controll ed by a Commissioner subordinate to the Chief, subordinate to the Commissioners are sixteen Deputy Commissioners, each holding executive and judicial charge of a distinct, under whom are numerous other officials, both executive and judicial, in charge of the one hundred and fourteen sub-divisions into which the several distincts have been divided. There are 18 sub divisions in the four distincts of the Arakan Division, 55 in the six distincts of the Pegu Division, and 41 in the six distincts of the Tenasserim Division.

Census

A census was taken of the province of British Burmah on the 15th August 1872, and by it the population was computed to be 2,747,148 soulls, or males 1,435,518 females 1,317,639, the former exceeding the latter by 123 888, this disproportion being due to the fact that most of the Hindoo males are alsens, who are only temporary residents and have not their families with them According to a census taken for revenue purposes in 1876, the total population of British Burmah was computed to be, 2,942,605 souls. In the Administration Report for 1877 78, the population is given 18 3 011,614, 18 shown in statement given at page to

BRIEF GENERAL DESCRIPTION.

Berar, Eastern and Western, known as the Hyderabad Assigned Districts, forms the northernmost portion of the H3 derabad native state This tract was assigned to the British Government, under the treaties of 1853 and 1861, in pledge for debts incurred hy a former Nizam during the early struggles for the sovereignty of the Deccan on the dissolution of the Mogal empire, and for the maintenance of the military force termed the Hyderabad or the Nizam's Contingent, raised in lieu of the troops which the Nizam had been previously bound to furnish on demand in time of war This assigned nortion is situated between longitudes 76° o and 79° 15 East, and latitudes 19° 30' and 21° 45' North, and is about 150 miles in length from north west to south east, and about 144 miles in breadth from north to south, with an area of 17,711 square miles, and a population of 2 227,654 souls, giving an average of 126 persons per square mile for the whole tract. Berar is bounded on the north and east by the districts of Nimar, Betul, Nagpur and Wardha of the Central Provinces, and on the south and west by the remainder of the Nizam's Dominions known as Hyderabad, and the district of Khandesh of the Bom bay Presidency Although entirely under British administration, the nominal sovereignty of the country is still retained by the Nizam

The Ajanta range of hills intersects the whole province from west to east, and its steep ridge divides the interior geography of Berar into two systems. Setting aside the Melghat or Gangra mountain tract of the Gawilgurh hills as abnormal, we have two distinct sections of Berar the Payanghat or lowland country, with an average height of 1,000 feet, bounded on the north by the Gawilgurh hills, and on the south by the outer scarps of the Ajanta range, and the Balaghat, or upland country above the Ajanta ridge, sloping down southward beyond the flasts or passes which lead up to it. The mass of the Gawilgurh hills or Melghat mountain tract, which may be said to will in Berar on the north, vittains elevations varying from 2,000 to upwards of 4,000 feet, the highest summit, Bairat, being 4,200 feet. It forms the outermost southern barrier of the Sat pura range, and rises abruptly from the plain of Berar or the Payanghat. On these hills the plateau of Chikaldh, the sanitarium of Berar, is situated. It is distant 20 miles from Elichpur

The principal rivers of Berar are the Tapti for a short section of its course, the Wardha skirting its eastern boundary, the Penganga skirting very nearly the whole of its southern boundary, and the Purna There is but one lake in the whole province, the remarkable salt water lake of Lonar, situated on the most southerly plateau of the Buldarn district. This lake presents the appearance of an enormous crater of an extinct volcano, and deserves mention as being one of the most prominent, curious and interesting physical features of Berar

The population of this province is dense, its rainfall regular and copious, and its area almost entirely cultivated, the whole of the plain surface being covered over at harvest time by a sheet of crops. It possesses one of the richest and most extensive cotton fields in India, and several cotton marts of the very first calibre, and in respect to natural and material advantages it surpasses any tract in the Central Provinces. A group of beds of thick coal of fair quality has lately been found in the Wim district, and iron one is very plentiful throughout large tracts on the eastern side, especially in the hills about Karinja, and among the low ranges close to Amraoti on the north east.

The Resident at the court of Hyderabad stands in the position of Chief Commissioner of Berar, and is the head of the local administration, directly subordinate to the

Government of India. For administrative purposes, Berar is divided into two divisions, each controlled by a Commissioner Subordinate to Commissioners are six Deputy Commissioners, each holding executive charge of a district, under whom are fifteen Assist ant Commissioners, and eight Extra Assistant Commissioners, in executive charge of the twenty two Sub-Divisions of the six districts, the average area of each Sub-Division being

The last census of Berar was taken in November 1867 the proportion of malesto females is equal, and Mahomedans constitute only seven per cent. of the whole population which is classified as follows —Ch istians 841, Hindus 1,883 242, Mahomedans 168,283, Parsis, Buddhists and Jains 6,604, Aborigines 168,684 Total for the whole Province 2,227,654

Hyderabad (The Nizam's Territory) or The Deccan

The Nizam's Dominions called also Hyderabad Native State, from the name of its capital, is the same as the Subhat of the Deccan of Mogal times, and forms by far the largest and most important of the protected native states of India. This territory occupies the central portion of the table land of the Deccan a term which in its limited sense implies the tract of country in Southern India situated between the Nerbudda and Kistna rivers, and supported by the Eastern and Western Ghats Hyderabad is situated between latitudes 15° 10 and 21° 45 North, and longitudes 74° 40 and 81° 32 East. It is about 475 miles in length from south west to north-east and about the same distance in breadth The area is estimated at nearly 98 000 square miles, with a population of about 11 millions, giving an average of 112 souls to the square mile. The territory is bounded on the north and east by Berar and the Central Provinces, on the south by the territory subject to the Presidency of Madras, and on the west by the territory subject to the Presidency of Bomby, and is traversed and skirted by the river Godavari with its tributories the Purna and Manjira, by the Pranhita with its tributaries the Wardha and Penganga, and by the Kistna with its tributaries the Bhima and Tungabhadra, all flowing from the Western Ghats eastwards into the Bay of Bengal The whole territory is an elevated table land in some parts using to upwards of 2 500 feet above sea level and is to a large extent covered with low brushwood and uncultivated, but where irrigated and cultivated the soil is fertile and produces large crops of cotton, wheat, the pulses, rice, and oil seeds, and date and palm trees are common everywhere

The capital of the state stands on the southern or right bank of the river Musi, which flows between it and the Residency, and is fordable except when swollen by the rains It is about a mile distant from the Residency, and five miles by the road from the cantonment of Secundrabad The population of the city and suburbs has been estima ted at about 400 000

The revenue of this state is about £ 4 000 000 per annum and the Nizam's forces number 720 guns and about 30 000 men of whom upwards of 6 000 are Arabs and there are altogether about 10 000 foreign mercenaries besides in his territory The only feudatory of the Nizam is the Raja of Gudwal who is not interfered with so long as he pays Rs 1,15 000 a year into the Nizam's treasury

The climate of Hyderabad is on the whole pleasant and healthy during a greater part of the year, the temperature is moderate and is described as a delightful medium between the extremes of heat and cold experienced in the northern parts of India In the cold season the thermometer stands at 7.1° rising to 91° in the hot months of which April and May are the most trying The average rainfall is very small, not exceeding 32 inches for the whole country

The Railway from Madras to Bombay runs through a portion of this state, a branch called the Nizam's State Railway, 121 miles in length, striking off from Wadi station. to Hydersbad the capital, while the Great Indian Peninsula Railway from Bombay to Nagour, traverses the whole length of Berar, from west to east

The Government of the native state of Hyderabad, or the Nizam's Dominions, is modelled after that of Madras Each district or Sirear has its first, second, and third Talukdar, corresponding to Collector, Sub Collector and Assistant Collector districts united, form a division under a Suddar Talukdar of Head Collector rural chiefs who are distributed throughout the interior of the country under the names of Deshmukhs, Despandias, Zamindars and Mannewars, are associated in divers forms and degrees with the Revenue and Police administrations of their native districts

BRIEF GENERAL DESCRIPTION

Area, Position, Boundaries, &c

Rajputana, so denominated from its prevailing population; the Rajputs, is a great territorial circle including the British district of Ajmere Merwara and nineteen states, each having its own autonomy and separate chief This territory lies between the paral lels of 23° and 30° North Latitude, and 69° 30 and 78° 15 East Longitude The total area is approximately estimated at 129 091, square miles On the west Raiputana is bounded by the province of Sind in the Bombay Presidency, and on the north west by the native state of Bahawalpur under the Punjab Government, thence all its northern and eastern frontier marches with the Punjab and the North Western Provinces, on the south east it is bounded by the territories of Sindhia. Holkar and other native states of the Central India Agency, and on the south west its frontier marches with the Gujarat native states of the Bombay Presidency Within this area, the states of Jeysulmere, Jodh pore or Marwar and Bickaneer lie in the west and north, Ulwur and the Shekhawati tract of Teypore in the north east, Jeypore, Bhurtpore Dholpur, Kerowlee, Boondee, Kotah and Ihallawar are the eastern and south eastern states. Sirohee lies in the south west, while Partabgath Barswara Dungarpur, and Oodeypore or Meywar lie in the south the centre lie the British district of Ajmere-Merwara, the states of Lishengarh and Shah pura and parts of Tonk.

Topography

Rapputana is divided into two main divisions by the Aravalli range of hills which runs through it in a direction nearly north-east and south west, about three-fifths of the territory lying north west of this line and two fifths on the south east. In order to make a general description of this great region intelligible, these divisions will be dealt with separately

The North West Division comprises the whole vast tract stretching from Sind on the west, and along the southern Punjab frontier, to near Delhi on the north-east. The character of this tract which radiates with a constant though very slight slope towards the Rann of Cutch and the Indus, is throughout uniformly sandy, unproductive and ill watered, though improving gradually from a mere desert in the west and north west, to comparatively habitable and fertile lands towards the north east and north Immediately beyond the mountain's skirt, the soil alters from hard rock to sand mixed with very little loam, and the country, as far as the beginning of the desert proper, or up to the Lom river, consists of a succession of gentle swells clothed with rather thick low jungle, fairly peopled and to some extent cultivated Beyond the Loni river, and from the edges of the Rann of Cutch, stretches north eastward through the states of Mallani, Jeysulmere, Jodhpore, and Bickaneer, the Great Desert of northern India known as the Tharr, a vast sandy plain traversed in the interior by long waves of sand hills. The character of this desert region is the same everywhere, consisting of long straight ridges of sand hills run ning in parallel lines, separated by short and fairly regular intervals, and varying from 50 to 100 feet in height, sparsely clothed with stunted shrubs and tufts of coarse grass, with wells few and deep, rendering agriculture difficult, and towns and villages at long dis tances apart. In the north-eastern angle of Rajputana, the country is not so near a wilderness as in the extreme north and west, yet a great extent is comparatively waterless and waste. Some few parts, however, have a better soil, and in these the principal towns are well built and fairly prosperous The sub montane region, lying immediately under north east, the first appearance of this range on a large scale is near the town of Khetri. where it attains an altitude of 2 600 feet, increasing to 2.450 feet at Ragonathgarh its highest elevation in this direction, Harasmith in the Sikar district being 2.008 feet. At A mere the range begins to widen out considerably, the highest points ranging from a occ to 2 000 feet above the plain, the most conspicuous neak being that on which stands the fort of Taragarh, overlooking Aimere, 2.855 feet above sea level From Aimere to Reavar the range is less imposing From near Beawar south west, for about 100 miles in the Merwara strip of hill country in the range, the neaks rise to about 2.850 feet, the average level of the valleys being about 1,800 feet Beyond Merwara the hills widen. with peaks rising to about 4,000 feet above sea level, the culminating point rising above the village of Jargo, to the height of 4 330 feet There is great difficulty of communica tion across this section of the Aravallis between Meywar and Marwar, and the only mass really practicable for wheels and general traffic is that of Disurt. Further south, the hills decrease in height, and spread out until the chain loses its distinctive formation amid wide tracts of hilly wastes, extending southward over the whole western half of Meywar Mount Abu belongs by position to the Aravalli range, it is a cluster of hills of which the highest peak rises to 5.653 feet. The other hill ranges of Raiputana are comparatively insignificant, they run through Bhurtpore, Boondee and Kerowlie, their createst height no where exceeds 1,400 feet. The Makandarra range runs across the south west districts of the Kotah state, from the Chambal to beyond Ihalranatan

Of rivers, the Chambal is by far the largest in Rainutana, flowing through the pro vince for about one third of its course, and forming its boundary for another third It rises in the summits of the Vindhyas, unwards of 2,000 feet above the sea, and is about 650 miles in length Next in importance to the Chambal is the Banas, which rises in the south west of Meywar, collecting in its course all the drainage of that tract, and joining the Chambal a little beyond the north east extremity of the Boondee state, after a course of about 300 miles In the north west division, the only river of any consequence is the Loni. rising in the Pohkhar valley near Aimere, and after a course of 200 miles flowing into the Rann of Cutch, its waters are brackish, hence its name, meaning the salt river North west of the Lore, and throughout all the north east, Rapputana is entirely destitute of streams worth mention The minor rivers are the Sabarmati, the Mahi, the Som, the Banns, the Parbats, the Berasch, the Kotesar and the Dhund The Banas abounds in dangerous quicksands

There are no natural fresh water lakes in Raiputana, the only considerable basin is the well known salt lake at Sambhar There are however, large artificial lakes within Meywar, built with the object of storing water, ses. the Debar, Kankraoli, Udisagar and

Pichola lakes

The following lines of Railway run through the Province, zes, the 'Raiputana State Railway from Palanpur to Ajmere. Jeypore and Agra a branch line to Delhi diverging from Bandikus station This line is open for traffic from Agra to Almere, as also is the branch to Delhi, from Ajmere to Palanpur it is under construction The 'Ajmere and Neemuch State Railway, also under construction, the 'Holkar State Railway,' from Khandwa station on the Great Indian Peninsular line to Neemuch, with a branch to Unam open for traffic, and the 'Sindhia State Railway from Agra to Gwalior 11d Dholpur, open for traffic up to the last named place

Climate

The climate of Rajputana as a whole may be reckoned as one of the healthiest in India, at least for its natives The moderate rainfall, the free play of the winds over its The Bengal Presidency.

Nett Samus and Salana formed o gually a part of Ruthur whose Ch ef o cons dered the puncipal Rappus leader in

Western Males - Hashi Bhasa Jaghars (appanages of the eight brothers.) 4 Chobe Jaghars.

flood discharge of 100,000 cubic feet, rising during the rains to 300,000 cubic f et per second, and drying up in the summer, the Ken or Kajan rising among the hills on the southern frontier, towards the Saugor division of the Central Provinces, at an elevation of 1,700 feet, with a length of course of 230 miles, and with numerous rapids and cataricts, some not less than 300 feet, the water of this river is un wholesome, the Chamidal, with his thibutures the Kali Sand, Parbatta and others, draining the whole of Malwa and rising near the station of Mhow, amidst a cluster of summits of the Vindhya range, having the local appellation of Janapaca, and, after a course of 650 miles, flowing into the Jamna, the Tars rising in the state of Malwa, with a length of course of 165 miles, the Sind, rising near Stronj in Malwa and flowing into the Jamna after a course of 650 miles, do miles, and the Soane, rising in the hills of Amarkantak and draining the Baybelkhand tract

The northern part of the country, of moderate elevation, has a climate partaking of the tornd character of the neighbouring tracts of the North Western Provinces and of Rainutana. In these parts the climate during the rainy season, and for a short time after wards, is exceedingly unhealthy, fevers being then very rife in consequence of the moisture. imbibed by the superficial diluyial soil, being prevented from passing off by an imperme able substratum of sandstone During the dry and hot seasons the climate is not un healthy. The middle, the southern and the western parts, or those comprised within the Malwa tract, with little exception, have a mild and rather equable climate, resulting from . the greater elevation of the surface The cool season comprises the period from Novem ber to February, the hot season succeeds and continues to the middle of June, when the periodical rains set in and last to the close of September, the average fall being about fifty inches. During the rains the thermometer has a very moderate range, rarely more than from 72° to 80°, in the winter it sometimes falls three or four degrees below freezing point. During the sultry season the hot winds are comparatively mild and of short dura tion, though the thermometer sometimes rises to nearly 100° during the day, but the nights are for the most part cool and refreshing.

The population of the country within this Agency is of a mixed kind, comprising besides Mahrattas (the ruling order), Bundelas, Baghelas, Jats, Rajputs and Mahomedans, the last being estimated at about a twentieth of the whole. The density of population for the whole of the Agency is about 95 to the square mile

Most of the territory under this Agency is well cultivated and fertile, and the whole of the Malwa plateau most fertile, producing in abundance and excellence, when, nor and other grains, and pulses, sugar cane, cotton and especially opium, the poppy producing it being so generally cultivated, that when in bloom it gives the country the appearance of a vast garden. The state of Jaora contrus the best poppy producing lands in Malwa, and yields yearly about 1,000 chests of opium. The town of Rutlam is the principal opium mant in western Malwa. Tobacco is also much cultivated and is of excellent quality.

The mineral resources of the whole country are extensive, iron, coal, copper and lime stone abound, and about twelve or fifteen miles north-east of the town of Panna, the capital of the state of that name in Bundelkhand, is an adamantiferous tract from which diamonds rice extracted, of the value of several thousand pounds sterling a year, the revenues from this sautce being divided between Panna and Charkari. The mines are less prosperous now than formerly, but it is believed that inexhaustible damond producing strata exist in that locality, and if the mines were properly worked their productiveness would be

BRIEF GENERAL DESCRIPTION.

The country embraced by the Central India Agency, lies within the parallels of 21° 24 and 26° 52 North, and meridians of 74° o' and 83° o' East, and is bounded on the north east by the British districts of Mirzapur, Allahabad, Banda, Hamirpur, Jalaun, Etawah and Agra of the North Western Provinces, on the north west by the native states of Dholpur, Kerowlie, Jeypore, Kotah, Jhallawar, Tonk and Oodeypore of the Rajputana Agency, and on the south east and south, by the British districts of Nimar, Hoshangabad Narsinghpur, Saugor, Damoli, Jubbulpore, Mandla and Bilaspur of the Central Provinces, and the Garhjat states of Chang Bakhar and Koria of Chota Nagpore in the Bengal jurisdiction The British districts of Jhansi and Lalitpur of the North Western Provinces divide this Agency into two main divisions, native Bundelkhand and Baghelkhand, lying on the east of the said districts, and the remainder, or Central India portion, on the west Excluding native Bundelkhand and Baghelkhand, the area of the larger or Central India division, is about 61,700 square miles, with a population of 4,690,000 souls and a revenue of Rs 201,23 000, within this area the states of Indore, Dewas, Ruthim, Dhar, Jabua, Ali Rajpur and Barwani lie on the south west, on the south east is Bhopal lying across the Vindhya mountains and resting its southern frontier on the Nerbudda, in the centre are Rajgarh, Khilchipur, Narsinghgarh, Basoda and Karwai, and in the north are Gwalior and Datia. In the smaller or Bundelkhand division, with an area of 24,400 square miles, and a population of 3,480,000, Rewah lies on the east, Orchha or Tehri on the west, and Panna in the centre.

The Bundelkhand portion forms the eastern part of the great triangular plateau of Central India, it is inhabited by the peculiar Hindu tribes of Bundelas on the west, and Baghelas in Rewah on the east. To the west is the river Betwa and its tributary the Dhasan flowing to the Jamna, in the centre is the Ken also flowing into the Jamna, and to the east is the Soane flowing into the Ganges, with the Khaimur range,—a continuation of the Vindhyas,—rising up along its left bruh. The Panna range, with deep ravines and isolated crags on its north western face, traverses Bundelkhand, and there is a broken plateau between the Panna and Khaimur ranges watered by the Tons, a tributary of the Ganges. Here is the military station of Nagode, and below the Panna range, is Nowgong. To the north, Bundelkhand terminates in an amphitheatre of precipices, shaping the country below into a bay bounded by sandstone chiffs, which again advance to near the Jamna at Mirzapur

The larger or Central India division, his the great range of the Vindhyas along the whole south, shruptly overhanging the valley of the Nerbudda and presenting the appear ance of a weather beaten coast line From its summits, varying in height from 1,500 to 2,500 feet, the northern slope to the Ganges commences, the whole region consisting of a broken but elevated country, with ranges of hills watered by the river Chambal, with stributiants the Kall Sind and Parbatti, the Sind and the Betwa, ill flowing north to the Jamna and Ganges, and descending from the high table lands in cascades of great height.

The rivers that water Central India and Bundelkhand are the Betwa rising in Bhopal, with a length of course of about 360 miles, and an ordinary flood discharge of 200,000 cubic feet per second, during the rains in extraordinary floods, the discharge is 300,000 cubic feet, and the surface velocity ten feet per second. It rises and falls rapidly in a few hours, is dry in the summer in the higher portion of its course, and is nowhere any gable. Its tributary, the Dharan, has a length of course of 150 miles, with an ordinary

flood discharge of too,ooo cubic feet, rising during the rains to 300,000 cubic feet per second, and drying up in the summer; the Ken or Kajan using among the hills on the southern frontier, towards the Saugor division of the Central Provinces, at an elevation of 1,700 feet, with a length of course of 230 miles, and with numerous rapids and cataracts, some not less than 300 feet, the water of this river is un wholesome; the Chambad, with its tributaries the Kali Sind, Parbatit and others, draining the whole of, Malva and using near the station of Mhow, amidst a cluster of summits of the Vindhya range, having the local appellation of Janapata, and, after a course of 650 miles, flowing into the Janna, the Tous rusing in the state of Malvar, with a length of course of 165 miles; the Sind, rusing near Stronj in Malva and flowing into the Janna after a course of 260 miles; and the Sount, rusing in the hills of Amarkantak and draining the Baghelkhand tract.

The northern part of the country, of moderate elevation, has a climate partaking of the torrid character of the neighbouring tracts of the North Western Provinces and of Rajputana. In these parts the climate during the rainy season, and for a short time afterwards, is exceedingly unhealthy, fevers being then very rife in consequence of the moisture. imbibed by the superficial diluyial soil, being prevented from passing off by an impermeable substratum of sandstone. During the dry and hot seasons the climate is not un healthy. The middle, the southern and the western parts, or those comprised within the Malwa tract, with little exception, have a mild and rather equable chmate, resulting from . the creater elevation of the surface. The cool season comprises the period from November to February, the hot season succeeds and continues to the middle of June, when the periodical rains set in and last to the close of September, the average fall being about fifty inches. During the rains the thermometer has a very moderate range, rarely more than from 72° to 80°, in the winter it sometimes falls three or four degrees below freezing point. During the sultry season the hot winds are comparatively mild and of short duration, though the thermometer sometimes rises to nearly 100° during the day, but the nights are for the most part cool and refreshing,

The population of the country within this Agency is of a mixed kind, comprising besides Mahratias (the ruling order), Bundelas, Baghelas, Jats, Rajputs and Mahomedans, the last being estimated at about a twentieth of the whole. The density of population for the whole of the Agency is about 95 to the square mile.

Most of the territory under this Agency is well cultivated and fertile, and the whole the Malwa plateau most fertile, producing in abundance and excellence, wheat, rice and other grains, and pulses, sugar cane, cotton and especially opium, the poppy producing it being so generally cultivated, that when in bloom it gives the country the appearance of a vast garden. The state of Jaora contains the best poppy producing lands in Malwa, and yields Jearly about 1,000 chests of opium. The town of Rutlam is the principal opium mart in western Malwa. Tobacco is also much cultivated and is of excellent quality.

The mineral resources of the whole country are extensive, iron, coal, copper and limestone abound, and about twelve or fifteen miles north-east of the town of Panna, the capital of the state of that name in Bundelkhand, is an adamantiferous tract from which diamonds are extracted, of the value of several thousand pounds sterling a year, the revenues from this source being divided between Panna and Charkari. The mines are less prosperous now than formerly, but it is believed that mexhaustible diamond producing strata exist in that locality, and if the mines were properly worked their productiveness would be found not to have diminished. The diamonds produced here are of four kinds, the motical, clear and brilliant, the manil of greenish hue, the Fanna linged with orange, and the banspal, blackish. The stones are, however, inferior to the Golconda drimonds written of in Part III. Madras Presidency

A trunk road from Gwalior to Bombay 1.12 Indore runs through the whole length of the Cental India division, and the 'Holkar State Railway' from Khandwa station on the Great Indian Peninsula Line, runs through Indore to Rutlam and Necmuch, beyond which the line to Nusseerabad is in course of construction, as also is a branch line, called the 'Bhopal State Railway', connecting Bhopal with the Great Indian Peninsula Railway at Itaris station The Jubbulpore extension line of the East Indian Railway, from Allahabad to Jubbulpore, runs through Bundelkhand

BRIEF GENERAL DESCRIPTION.

Area, Position, Boundaries, &c.

The Madras Presidency occupies the southern portion of the pennsula of India, with a considerable extension north-eastward along the coast of the Bay of Bengal Its bounded on the north and north west by the districts of Kanara and Dharwar of the Bombay Presidency, Hyderabad or the Nizam's Dominions, and the southern native states of Eastar and Kalahandi of the Central Provinces, on the north-east by the province of Orissa under the

Bengal jurisdiction, on the cast and south cast by the Bay of Bengal, on the south by the Indian Occan, and on the west by the Arabian Sea. The eastern portion of the Presidency extends from Cape Comorin, in latitude 8° 4, to the northern extremity of Misrate Gan 11m, touching Orissa in latitude 20° 18, the western portion extends to the coast at the eastern extramity of Mysore native state, in latitude 13° 50. The greatest length from the extremity of Gunjum to Cape Comorin being about 1,000 miles, and the greatest width, measured from the coast at the eastern extremity of Mysore to Madras, about 330 miles. The total extent of sea coast is about 1 700 miles, without, however, any single really good harbour. Exclusive of the native states, the area of the Presidency is estimated at 138,318 square miles, including these states it may be taken at 148,053 square miles.

The districts of Ganjun, Vizagapatam, Godavari and Kistna, are now known as the Northern Districts or the Northern Circars Prior to 1859 60 these Circars consisted of five districts, but in that year the three districts of Rajamundry, Masulpitatin and Guntoor were divided to form the present Godavari and Kistna districts. Under the Nizam's government the divisions of these two last named districts were as follow — Guntoor, Condaulity, Ellore Rajamundry and Chiecoole

The districts of Nellore, Madras, Chingleput and South Arcot, are called the East Central Districts In 1859 60 Madras town and Chingleput were unalgamated into a single district, but in 1870 this analgamated district was again divided as before, leaving the administration of the Madras town district in the hands of the Sea Customs Collector

North Arcot, Kurnool Bellary and Cuddapah are called the Ceded Districts, Salem, Combutore and Nilgiris the West Central Districts, Tanjore, Trichnopoly, Madura and Tinnevelly, the Southern Districts, and South Canara and Malabar, the West Coast Districts.

Topography, &c.

The principal features which give character to the portion of India embraced with in the Presidency of Madras, are the two mountain ranges which run through it on the east and on the west 21 , the Eastern and the Western Ghats The former range runs for some distance almost parallel with the eastern coast, the latter with the western Starting from the north, the Eastern Ghats running with the coast to about 50 miles north of Madras, sweep to the south west and eventually unite, in the vicinity of the Nilgiris, with the Western Ghats which extend to Cape Comorin on the one side and to the north western extremity of the Presidency on the other These two great ranges may be said to form, -one on the south west, the other on the south-east, -the buttresses or walls of the triangular table-land included between them, commonly called the Deccan Though this table land rises consi derably towards the south, it has a general slope of surface to the east and south east as indicated by the large streams flawing in that direction and emptying themselves into the The lowland lying between the base of the Western Chats, and the sea, is of less breadth than that lying in the like situation with respect to the Eastern Ghats, being in some places not more than 25 and nowhere more than 50 miles in breadth with the Western Ghats, the Pastern south of the Godavan river, are of trifling elevation, the mean height of the chain being about 1 500 feet, but attaining a higher elevation as the range approaches southward, near Madras and the junction with the other range in the vici mits of the Ailgins North of the Godavari river the Pastern Ghats rise to an elevation of upwar is of 5 000 feet, the highest points being Gallikonda 5,316 feet, and Galli Parvatam 1988 feet. The Western Ghats on the other hand rise to over 6 000 feet and at the

Nilgiris culminate to 8 760 feet. The Pulni hills to the south of the Nilgiris attain a height of from 6,500 to 7,100 feet, they are about 80 miles distant from Trichinopoly, and 40 from Madura, and have been recently proposed as 1 site for a Sanitarium. The Shervaroy hills on the east of the Nilgiris approach to within five miles of Salem and attain a height of 5,760 feet. Owing to the superior height of the western runge, and its vicinity to the coast, all the head witers of the great rivers of the Presidency originate there, and triverse the Eastern Ghats on their way to the sea.

The principal rivers are the Godwari, the Arishna or Kistra, in the Hower courses, the Penner, Paler and the Cauvery Numerous feeders, the chief of which is the Tunga badhra, from the Western Ghats and the plateau of the Deccan discharge themselves into the Kistra and Penner The rivers of the western and and southern coasts are numerous, but necessarily short in their courses and unimportant, as are also those in the extreme north eastern districts of the Presidency

The coast on the west called Malabar, from the north western extremity to Mangalore. is in general, hold indurocky, from Mangalore to Cape Comorin it is considerably lower and either muddy or sandy, having several shallow inlets termed 'Backwaters' extend ing in some cases a considerable distance (a couple of hundred miles) inland parallel with the coast, more or less navigable, and receiving the drainage of the streams coming from the Western Ghats Cochin is situated on the principal of these openings Cape Comorin itself is low and sandy, but a few miles inland, and to the north of the extreme point, the southern summits of the ghats rise in lofty and majestic peaks known as the Palm hills To the north east of Cape Comorin, the coast, for 166 miles, is low, rocky and much beset by reefs and is little frequented, as navigation northwards into the Bay of Bengal, is obstructed and rendered impracticable for vessels by a sandbank extending from the main land of India to Ceylon called Adam's bridge which has only two navi gable channels, not however deep enough for the passage of large craft. The sea here, called the gulf of Manar, has on the coast to the north west the harbour of Tuttcorin From Adam's bridge to Point Calymere, on the north of Palk's straits the shore has no bold features From Point Calymere the Coromandel Coast commences, and holds a direction while north across the estuaries of the Cauvery, which enclose a delta having a base of 82 miles towards the sea, where are the ports of Negapatam and Tranquebar, the Coromandel Coast continues to hold a northerly direction for 297 miles further to Gonderum. where the river Musi is considered to bound it to the northward and retains the same character of slight elevation and general sandy formation, with shallow water along shore Blackwood harbour is the only shelter throughout this distance for large ships, at all the other ports along this coast ships must be anchored in the open sea. I rom Gonde gam the shore is termed the Golgonda Coast, holding a direction north-cast for 270 miles to the southern point of district Vizagapatam and passing the estuaries of the Kistna and Godwari. Here the coast is so low that it is often inundated. Masulinatam. Cocanada and Coringa are the most important maritime places on this coast, which terminates in Latitude 17° 15 The Orissa coast commences at this point, here the coast becomes bold and rocky, and retains this character for about 230 miles to the north eastern extremity of the Presidency The eastern coast has a few extensive lakes which require notice. To the north of Madras is Lake I ulicat an extensive salt water lagoon, about 33 miles in length from north to south by 11 in breadth, it contains several islands and communicates with the sea by very narrow channels I ake Colour in the Listna district between the rivers Listna and Godwari formed by the overflowing those rivers and having a length of 17 miles and a breadth of 14 Lake Clifka eOrissa coast, in the extreme north-east, under the Bengal jurisdiction, 42 miles in length, by 15 in breadth, and separated from the sea only by a narrow bank of sand. The name signifies salt lake, it is very shallon, and nowhere exceeds six feet in depth.

The rivers of southern India give but little assistance to inland communication, but by means of crinals and excellent roads everywhere, this convenience is attained, there are besides several lines of Rulway running through the Presidency, the Madras Railway, 858 miles in length, and the Southern India Railway, 612 miles long connect Madras with Bombay and the principal towns in the Deccan as well as with those in the west and south, the extension from Bangalore, to connect Madras with Mysore, also a brunch line to Pondicherry being in progress

Steamers also leave Madras regularly for almost every principal port in India

Climate and Sanataria

From the physical features of the country the climate is necessarily very varieties The and plans of the east coast, with the thermometer occasionally rising to 115° in the shade, form during a greater portion of the year, a striking contrast to the green valleys of Malabar and Canara on the west, where the maximum heat is below 90 moisture brought up by the south west monsoon being condensed by the Western Ghats, the werage rainfall between that range of hills and the western coast is over 120 inches, most of which falls between the beginning of June and the end of August able portion of rain finds its way over the ghats to the central districts, while even those districts on the eastern coast, where river irrigation prevails, reap the benefit of this monsoon in the increased volume of water from the slopes of the Western Ghats. The north-east monsoon sets in about the end of September, and during its continuance the average rainfall does not exceed 30 unches. Previous to the rains, the country in the eastern and central districts is everywhere parched and life is endured with difficulty, Along the coasts, the sea breezes which set in shortly after noon almost throughout the year, do much to moderate the temperature. The table land or undulating surface on the summits of the Nilgiri, and Palnis, having an elevation of from 5,000 to 7,000 feet enjoys the mild climate of the finest part of the temperate zone. The temperature on the Vilgiris varies much less from north to south than from east to west. Mists and heavy fogs are not unfrequent in the rainy season, and the eastern side is less most than

the western Trom the end of October to M₁), 1 sky clear and nearly cloudless is the rule, September and October are pretty irregular in the quantity of rain they bring. In the upper ringes of the Annamille hills, which attain an elevation equal to that of the Nilgins in general, the temperature is much the same as in Octocumund. The rains here for six months of the year are very heavy, and it is doubtful whether the climate during these six months is at all suitable for the residence of Europeans. The climate is greatly influenced by the monsoons,—periodical winds produced by the unequal heating of the continent during certain seasons of the year,—the regular alternation of which is most remarkable, the transition from one to the other being usually marked by great atmospheric disturbance

Ootacamund is the sanitarium of the Presidency on the Nilgiris, but another his been formed on the Pilnis Other stations on the Nilgiris are Attara Malle, 4,500 feet, Dodabutia, 8,640 feet, Jakunari, about 5,000 feet, Donoone, 5,760 feet, and Kotaguri, 6,100 feet. The state of Soondoor contains a very important hill stinitarium for Europeans in the plateau of Ramandroog, which has been chiefly utilised as a convalescent depot for the troops serving in the Ceded Districts. It is distint from Bellary thirty eight miles and from Secundrabid 270 miles, and stands 1,825 feet above Bellary, and 1,200 feet above the surrounding plains. The length of the plateau from north to south is a mile and a half with a varing breadth of from half to three outsters of a mile.

Staples and Manufactures

The chief staples of the Presidency are rice, maize, wheat, millet, ragi and the pulses amongst food grains, oil-seeds, indigo, tobacco, sugar-cane, chillies, pepper, yams, plaintains and betel leaf amongst garden crops, and as a special crop, cotton has a large The trees most grown for their fruits are cocoanut, arecanut, jack, tamarind and mange. Cocounit palms flourish most luxuriantly on the banks of the estuaries and back waters of the western districts of Malabar and Canara The most valuable product of the Presidency is ship timber, abounding in the forests of Malabar, Canara and Travincore, as well as in the forests of the Eastern Ghats, principally Teak Sandalwood, supplied to the Chinese market, is also obtained from the forests of Mulabar and Coorg Coffee has been very extensively cultivated and is now an important crop The principal coffee tracts of southern India lie along the western coast, and coffee estates extend in nearly an unbroken line along the summits and slopes of the Western Ghats, from the northern limits of Mysore down to Cape Comorin, in the Nilgiris, the Sherr way and Palm hills and in several districts of the Presidency Tea cultivation has not the same interest in southern India as coffee cultivation, and there are few plantations except on the Nilgiris Tobacco is grown more or less throughout the Presidency, with the exception of Milabar and the hill ranges, but the chief localities of production are the alluvial lands of the Godavari district, where is grown the well known Lunka tobacco (so named from the Lunkas or river islands on which it is culti vated), and the Combatore and Madura districts Chincona is also grown on the Nilgiris, and there are now six plantations for the supply of this febrifuge

The mineral weight of the Presidency is considerable. Gold is known to exist in the Wynad and Nilgiris, and the attention of capitalists has been lately drawn to these auriferous tracts. Iron one occurs in several parts in abundance, and extensive found tes live been established in Bejorce and South Arcot. Manganese exists in Mysore, the Nilgiris and Bellary. Antimony and silver, copper and lead one in the districts of Madura, Cuddapah, Kurnool and Nellore, also in Mysore *Diamonds of moderate value and garnets in abundance are met with in the Cuddapah, Kurnool, Godavari and Viza gapatam districts, and coal is found on the banks of the Godavari near Chinnore.

The usual manufactures are sugar, indigo, pottery, carpets, hardware, cutlery, saddlers, cheroots, working in metals filagree and basket work, and the weaving of silk and cotton cloths and coarse woollens

The Pearl and Chank or Conch shell fisheries, carried on entirely under Govern ment management, are at present in charge of the Master Attendant of Tuticorin The gross receipts from these fisheries in 1877 78, were Rs 31,267, the expenses were Rs 8,363, leaving a net profit of Rs 22,904

Form of Administration

The administration of the Madras Presidency is vested in a Governor with a Council of three Members For administrative purposes the Presidency is divided into twenty-one Districts, each of which is placed under the charge of a Collector and Magistrate, all being subject to the direct control of a Board of Revenue composed of three Mem bers In the district of the Nilgiris the principal administrative officer is termed the Commissioner of the Nilgiris Each district is again sub-divided into Taluks, the general superintendence of which is distributed among the Assistants to the Collector, a special local revenue and magisterial head, called a Tahsildar, being in charge of each Taluk, and in larger Taluks the Tahsildar being aided by one or more Deputy Tahsildars and Sub Magistrates The administration of civil and criminal justice is under the superintendence of a High Court, assisted by District Judges and Subordinate Judges, the latter are usually natives

Census

The first Census of the Presidency was taken in 1822, when the population was when the numbers returned were 13 967,395, showing an increase of only 490,472 first of the quinquennial enumerations was taken in 1851 52, when the population was found to have risen to 22,031,697, or an increase of 58 per cent in 15 years. Other quinquennial enumerations in succession showed the numbers

1 ears 1851 52 22 031 697 as given in the margin. The last census taken was on the 1855 57 22 °57 855 15th November 1871, the resulting figures showed the popula 24 656 509 1861-6a 1866-67 25 539 052 tion to be 31,281,177, being a gross increase of 4,742,125 over

the figures of 1866 67, giving an average density of 2.6 persons to the square mile for the whole presidency. The sexes are almost equally divided, the proportion being ninety nine females to every one hundred males

BRIEF GENERAL DESCRIPTION

Area, Position, Boundaries, &c.

The Province or State of Mysore occupies a position physically well defined in the south of India. It is a table land situated in the angle where the Eastern and the Western Ghat ranges converge into the group of the Nilgiri Hills, and lying between TY 28 and IS 2 North Latitude, and 74° 43 and 78° 37 East Longitude. Its extreme breadth from east to west is about 200 miles, and extreme length from north to south about 230 miles It is bounded on the north by the Bombay Col lectorate of Dharwar and the Madras Collectorate of Bellary, on the south and east by the districts of Malabar, Salem, Coimbatore, Bellary, Cuddapah and North Arcot of the Madras Presidency, and on the west by the small province of Coorg, the South Canara Collectorate of the Madras Presidency and the North Canara district of the Bombay Presidency On the west the frontier of the state approaches at one part to within ten miles of the sea, but in general preserves a distance of from thirty to fifty miles from the coast on the east the nevrest point is not less than 120 miles. The southern extremity is about 250 miles from Cape Comorin The area of the province from the latest information, is estimated at 27 o81 square miles, and this estimate will continue to be accepted for statistical purposes, until a more accurate computation is arrived at by the Topographical surveys now being carried on in the province

Topography, &c

That portion of the Mysore province which is above the ghats is often called the table land, but this denomination does not accurately represent the character of the country, which is everywhere undulating and almost entirely free from the level tracts which characterise the greater part of Upper India One striking physical feature of Mysore, consists in the huge piles of rocks known as Drugs, rising abruptly in many parts to 1,500 feet above the plateau, some solitary, others clustered, and which are everywhere visible, most of them have been fortified from time immemorial, rendering them well nigh impregnable strong holds with the advantage of an unfailing supply of water at the summit. The Eastern Ghats form the frontier on the east, separating Mysore from the British posvinces in the Carnatic. In many parts the ascent over them into Mysore is steep, while in others it is an easy gradient. The country rises gradually from these ghats towards Bangalore, which is situated in the most elevated portion of the Mysore plateau, and about 3 062 feet above sea level On the north west, beyond the Chitaldroog range of hills, there is a gradual fall through the broad valley which leads to the Tungabadhra river, near the vilage of Harihar, the altitude of which above the sea is only about 1,800 To the south west, by Seringapatam and Hassan, there is a more marked descent, abruptly terminated by the western range of ghats, comprising in this direction the Nilgiri and Coorg hills, and further north the Manjarabad and Nagar ranges, known as the "Malnad or hill country, the chief peaks of which are loftier than those of the eastern hills The loftiest elevations in Mysore, on the east, are Sivaganga, about 30 miles from Bangalore, reaching a height of 4 559 feet above the sea level, and Nundydroog, thirty six miles from Bangalore, 4 810 feet above sea level, from whence the river Penner takes its rise, and the peaks of the Bellakalrangam hills in the Ashtagram division, varying in elevation from four to five thousand feet. These hills are clothed with rank vegetation, and un inhabited save by a rude tribe known as Soligars, on the west, Kuduremukha in the Nagar division, 6,215 feet, is one of the highest peaks in Mysore and a remarkable land mark visible from the sea, as well as from above and below the Ghats, and, the Baba

Budan mountains in the Nagar division, named from a Mahomedan sunt, whose tomb is on one of the peaks at an elevation of 6-14 feet, the highest point on this range being Mulainagri 6,317 feet. These hills are inhabited and contain several coffee plantations, some of which are probably the oldest in Mysore.

The principal rivers in Mysore are the Tings and the Bhadra rising in the north west of the province, uniting they form the Tingsabhadra which flows northwards and east wards till it joins the Krishna below humool, its banks are too high for irrigation pur poses. The Cautery, rising in Coorg, passes through the province in a south-easterly direction, receiving the Homavati, the Sokaparani the Shamsha and the Arkstati from the north, and the Lakshmantirtha and the Kapini from the south, the Cuvery and its tributuries supply numerous irrigation channels and truks their courses through the province being marked by a green finge of cultivation. The Valatati rising near the Baha Budan halls, flowing due north and joining the Tingabhadra the Penner the Paler and Punnair which rise in the eastern part of the province. The waters of those rivers are detained and converted into chains of tanks, but they become large rivers before reaching the sea. Owing to their rocky or shallow beds none of the above rivers are rawigable, and most are fordable during the dry months. There are no natural lakes in Mysore, but there are nearly 38,000 artificial reservoirs or tanks, some of which are of considerable magnitude. The largest is the Subkere tank in the Shimoga district, 40 miles in circumference

The principal forests are found clothing the sides of the western mountains they abound in teak, blackwood and other valuable kinds of timber. There are good roads throughout the province, and a branch of the Madras Railway \$4,7 miles long reaches Bangalore, the extension to Mysore, from Bangalore called the 'Mysore State Railway' is now in course of completion.

Climate

The climate of Mysore is sensibly affected by its considerable elevation above the second in the state of the country. It is temperate but not so healthy as implif be expected, owing to the prevalence of ever in many localities. The year may be divided into three seasons the hot, the rainy and the cold. In the hot season the thermometer ranges from 69° to 90 in the shade, and in the cold season from 50° to 77. The inglist are seldom hot the mornings and evenings are always cool if not cold and the air is very elastic. The cold season is generally free from rain and lasts till the end of Februry. The province is favored by two monsoons, the south west and the north east, the former commencing at the beginning of June and closing about the end of August. The north east monsoon sets in at the beginning of October and generally ceases about the middle of November. The rain is more continuous than heavy throughout the greater part of the country, but in the tracts verging upon the Western Ghats it is unintermitting and puts a stop to all traffic. The annual rainful of these regions is neuly five times that of the rest of the country, the quintity dimmissing rapidly as the distance from the Ghats increases. The close of the rainy season in November is marked by dense fogs which prevail all over the country during December and January. Electric storms are common and excessively vollent.

Staples and Manufactures

The crops chiefly grown in Mysore are rice ragi millets gram, wheat, sugar-cane, oilseeds, cotton opuum betel, cocoanut and tobacco. Coffee is extensively cultivated and

the cultivation of this berry now takes rank as one of the most important industries of the country. Lac, gums, pepper and resin are also produced, and sandalwood gross spontaneously throughout the province. Many of the fruits and vegetables of Europe are also successfully cultivated.

The trade of the country being difficult to develope, owing to its land locked posinte mountain burners which separate it from the surrounding countries on three
sides, and the want of navigable triers, the manufactures are on a small scale and mostly
carried on to supply native consumption. Gold dust is found, but there is no metal except
ron in any degree of abundance. Garnets are frequently to be met with and kankar, or
calcareous concrete for road making, exists in considerable quantities between Brigalore
and Seringapatam. Common salt and carbonate of soda impregnate the soil in many
places, and are extracted for domestic or manufacturing purposes.

Form of Administration

In 1831 32 in consequence of the misgovernment of the then ruling prince, the Government of India assumed the direct administration of the affairs of Mysore, and first appointed two Joint Commissioners in whose hands the Government of the province was vested In 1834 a single officer was nominated as sole Commissioner in supercession of the Joint Commissioners, and to whom, in 1843, were also delegated the duties of Resident, that office as a separate post being abolished In 1862 the administration was re-organised on the model of the Punjab system, and a great number of reforms were insti tuted, all tending towards the introduction of the regulation system. The province was divided into three divisions and eight districts, each division being placed under a Superintendent and each district under a Deputy Superintendent, aided by Assistant Superintendents for the several Taluks into which the districts were sub-divided, and corresponding with Tahsils in northern India, the average area of each Taluk being about 333 square miles. These Taluks were again sub-divided into Hoblis, each of which was placed under the revenue charge of a native officer styled Shekdar, they number 500 In 1869 the title of Commissioner was changed into that of Chief Commis sioner, by whom the Government of the province is now administered, and in 1873, the designations of Superintendent, Deputy and Assistant Superintendents were changed into those of Commissioner, Deputy and Assistant Commissioners, respectively Judicial Assistants were also appointed to each district for the disposal of civil suits

Census

The first general census of Mysore was taken in 1840 41 and the next in 1851 52, since which periods annual returns were made up until a general census of the province was again taken in November 1871, Winch last is regarded as fairly reliable, according to it the total population of the province was 5,055.412 souls, 2,535,924 being males, and 2,519,488 females Of the total population the agricultural classes are in the proportion of one fourth, the non agricultural three fourths.

BRIEF GENERAL DESCRIPTION

What Wales is to England, Coorg is to Mysore in miniature and though governed by the same Chief Commissioner the province is British territory and forms no part of Mysore Coorg occupies the summits and eastern slopes of the Western Ghats, within the degrees of North Luttude II. 55 and I2. 50, and East Longitude 75. 25 and 76.
I.4 and has an area, of 2 000. square miles, its greatest length from north to south being sixty, and from west to east forty miles. Coorg is bounded on the north by the Netrayati Kumaradhari and Hemayati rivers which separate it from the southern taluks of South Canara and the Manjarabad taluk of the Mysore district, on the south the province is bounded by the Brahmagin mountains which divide it from the Wainad taluk of the Malabar distict, on the west, by the South Canara and Malabar districts of Madras and on the east by the Mysore and Hassan districts of the province of Mysore, the river Cauvery marking for some distance a portion of the eastern boundary A narrow arm about twelve miles long by about six wide, projects north wards into Mysore on the north east. The greater part of the western frontier is from twenty to thirty nules from the sea. The name Coorg has been anglicised from the native names 'Kudagu or "Kodumale signifying 'mountainous country" or steep mountains

In physical features the province of Coorg differs greatly from most of the surround ing districts, owing to the mountunous and wooded character of the country It is a constant succession of steep ridges and deep ravines, the whole clothed with forest more or less dense, very dense on the eastward towards Mysore, where it is almost wholly un inhabited. Advancing westward the forests decrease, leaving Kiggatnad comparatively open, and Yelsavirshime a champaign tract. The Western Ghats running north and south with an elevation of from 5,000 to 6,000 feet, divide the territory into two unequal portions On the southern limits the Brahmagiri or Marenad range of hills, running in a direction from east to west, constitutes a formidable natural barrier between Coorg and Wainad, a sub division of the Malabar district, with a general elevation of 4,500 feet the highest peaks being Davasi betta, Hanuman betta, Kadanga male and Peru male. The table-land upon which Mercara or Madakere is situated, has an average altitude of 3 500 feet and is crossed in all directions by minor hills and ridges, being bounded on the west by the Ghats, which culminate near the Bisilu Pass in the Pushpagiri hill, 5 626 feet above sea level, the summit of which commands an extensive prospect over Coorg Canara and Mysore. Other detached hills and ridges, though numerous, are not deserving of any particular notice. Some few detached ranges are situated along the eastern boundary, not however remarkable for either elevation or extent, amongst them the peaks of Siddesvar and Maukal betta are the most prominent, the former guards the pass that gives entrance to Coorg Near Mercara the hills are closer together and more abrupt, and the ravines deeper and more wild Towards Fraserpet the country assumes the champaign character of the Mysore plateau, with scattered solitary hills. South of Mercara the country is open with beautiful grassy downs The general declivity is to the north east and east, as indicated by the Cauvery and its tributaries flowing in that direction and receiving the drainage of nearly four fifths of the country

None of the rivers of Coorg are considerable as to breadth or depth, and the inequalities of the country through which they shape their course, render them unfit for navigation or for use in irrigation. The principal rivers rising in Coorg, are the Cauvery Lakshmantirth, Suriavati, Hemiyati, Barapole and Nujikal. The Barapole is navigable from the sea to within sixteen miles off the foot of the Ghats. The Cauvery rises in the Brahmaguir rabge, at a place called Tale Kaveri, where there are temples of great repute among the Hindus, which are yearly resorted to by thousands of pilgrims from the adjoining countries, the river being considered the holiest in India, the Ganges not excepted. Near Fraserpei this river during the monsoons rises to a height of from twenty to thirty feet. All the mountain streams form cascades of great beauty in their courses through the hills, especially the Jessy fall near Mercari.

The climate of Coorg is temperate and humid

The rainfall during the last thirteen pears, his averaged 123 inches in the year. Of late years the denudation of forests and the natural decay of the bamboo have had the effect of rendering the rainfall less regular and heavy. In May, the hottest month the thermometer has never been known to exceed 86%, and the mean temperature in that month is 70°. In September, which is the coldest month, the mean temperature is 64°, the average temperature thoughout the years 664°. The hot oseason commences in February and continues till the close of May, succeeded by the rainy season, when the south west monsion sets in and prevails from June to September. The climate, in spite of its excessive humidity, is on the whole salubrious, except in the valleys where fever greatly prevails, it is a remarkable fact, however, that it appears to be decidedly intimical to the cure of cuts, wounds and sores, which are offen totall) unmanageable without change of air.

Rice is the chief staple of Coorg The cultivation of cardamoms is next in im portance to that of rice. Coffee and sugar cane are extensively produced, and tea, chinchona, cotton and tobacco are also grown to a small extent English fruits and vege tables are satisfactorily grown, and the Coorg oranges are celebrated. The cardamom is indigenous to certain forests in Coorg called males, situated on the line of the ghats at an elevation of from 2,500 to 5,000 feet above sea level. The cultivation of this plant is to a great number of Coorgs next in importance to that of rice, and the posses sion of a fine cardamom jungle is regarded as a mine of wealth. The gardens come into bearing in October and September of the fourth year, and continue to give good crops for seven years, when they begin to decline The plant can be easily grown from seed, and a garden of 500 square yards will on an average yield 13lbs weight of good cardamoms Coffee is also a staple commodity of Coorg, and to it the province owes much of its pros perity The plant is propagated by cuttings, but is usually grown from seed, which is put down in March or April, the maiden crop being given generally in the third year, an acre of land yields on an average six to eight cwts of coffee, and an estate in good order should give a return of 50 per cent on the outlay There are no mines in Coorg and the whole of the metal in use is imported. Manufacturing industry has made little or no progress amongst the population, and almost every article in use in the country has in conse quence to be imported

At present Coorg is administered by the Chief Commissioner of Mysore, reading at Bangalore, who is in direct subordination to the Government of India. The Superintendent of Coorg, an officer of the Mysore Commission, is the chief local authority, exercising civil, criminal and revenue powers within its limits, under subordination to the Chief Commissioner For administrative purposes the province is divided into its kinkip, each in charge of a Sub Magistrate, called a Subbadar The taluks are again sub-divided into twenty four nads containing on an average about 67 square miles each. In north Coorg the nads, or as they are called Hobbis, are much smaller and more thickly populated Each Nad or Hobbi is in charge of a Parpatitegar, vested with subordinate magisterial powers Coorg is a non-regulation province.

The only assemblages of dwellings which can with any propriety be denominated towns, are Mercara the cepital and a military station, thenative portion of the town being known as Mahadevapet, Fraserpet, the monsoon head quarters of the Superinendent, and a town of small extent, situated on the eastern frontier and at the foot of the hills on which Mercara stands, Virajendrapet and Somwarpet The dwellings of the Coorgs in the country generally are isolated, and it is only here and there that the eye can detect the thatched, houses of the inhibitants betrayed by solitary wreaths of smoke

A previous computation showed the population to be 17,689, the last census taken in November 1871, gave the number of inhabitants at 168,312, showing an increase of about 48 per cent, the males numbering 94,454, the females 73,858

The Nat we States in the south part of the Bombay Pres dency represent the remains of the Maratha empire the principal state of the southern group is Aslbapur

The State of Print lapsed to the British Government in 1878 and is now included in the Nasik district

The State of Varukot is managed by Bri ish official and the Ch ef is allowed half the revenue as income.

The Menusi and Dang states of the Khandesh Agency 1 c m the north west corner of the Khandesh district between the Norbudda and Tapt never. The habitants of this wild forest region are Bh B, and the principal income of the chiefs is derived from the manufacture and sale of a logic called Manura

BRIEF GENERAL DESCRIPTION

Area, Position, Boundaries, &c

Western India, or the territory under the administration of the Government of Bombay, known as the Bombay Presidency, extends from North Latitude 28° 45, the most northerly point of Sind, to 13° 53 in the extreme south of the Kanara district, and from East Longitude 66° 40, the most westerly point of Sind, to 76° 30 the eastern extremity of Khrindesh, the extreme length of the whole territory being about 1,100 miles, and breadth about 300 miles This jurisdiction comprises a total estimated area of 198,809 square miles, the area of the British possessions being 125,849 square miles and that of the native dependencies about 72,960° square miles The Presidency is bounded on the west by the Arabian Sea, on the north west and north by Beluchistan, on the north-east by the British district of Muzaffargarh, the native state of Bahawalpur under the Punjab

jurisdiction, and the native states of Jejsulmere, Jodhpore, Strohee, Oodeypore, Dongar pur and Banswara of the Rajputana Agency, on the east by the native states of Jabua, Alt Rajpur, Barwani and Indore of the Central India Agency, the British district of Nimar in the Central Provinces, the Bert assigned district of Buldana and the Nizam's territory, and on the south by the native state of Mysore and the British district of Buldan and the Madras Presidency. An urea of 360 square miles was trunsferred in 1878, from the British district of Khandesh to Indore, the population so transferred is not known.

The only foreign possessions included within the limits of the Presidency are those of the Portuguese Gorvennment, 272, Gor, Daman and Diu, which are described at page 164

Topography, &c

The natural divisions of this Presidency may be classified as follows —r.t., The province of Sind—the valley of the lower Indus,—a flat plain about 360 miles in length from north to south, and about 270 miles in its greatest breadth from east to west, containing an area of 54,985 square miles, without hills and with but scrut vegetition, depending for its productiveness entirely on the water of the river, obtained partly by natural inun dation during the months of flood and partly by canal irrigation = 2nd, Guparat, embra cing the peninsulas of Cutch and Kattywar, consisting—except in its northern parts—of rich and highly cultivated plains, alluvial in their origin but not now subject to in undation 3rd, The Konkam, or the lowlands lying between the base of the Ghats and the sea, a difficult country intersected by creeks and abounding it isolated peaks and detached ringes of hills—4th, The plains of Khandesh and the Decean, drained by large rivers, with tracts of much fertility near their banks—5th, The Karnatic, or country south of the Krishna, consisting of extensive pluins of black or cotton soil in a high state of cultivation.

The districts of the Presidency are classified as follows, with reference to the natural divisions above named —

Sind Dutricts - Kurrachee or Karachi, Thar and Parkar, Hyderabad, Shikanfur and Upper Sind Frontier

Guyarat Districts —Surat, Broach, Kaira, Panch Mahals and Ahmedabad Konkan Districts —Ratnagui, Kolaba and Thana

Decean Districts —Ahmednagar, Khandesh, Nisik, Pooni, Satara and Sholapur South Maratha Districts —Belgaum, Dharwar, Kiladgi, and Kanara

The physical features which give their peculiar character to the above different parts of the Presidency, are the river Indus in Sind, the gulfs of Cutch and Cambay and the Rann of Cutch in Gujarat, and the rivers Nerbudda and Tapti in Gujarat proper, the river Tapti in Khandesh, the rivers Godavari and Bhima in the Deccan, and the Western Ghitts, separating the plateaux of Khandesh and the Deccan from the low lying plains of Guiarat and the Konkan.

The chief mountain ranges have a general direction from north to south. On the north of the Presidency are the Hala mountains, a continuation of the great Suleiman range on the right brink of the Indus, separating Sind from Baluchistan. Lexung Sind and passing by the ndges of low sand hills,—the leading feature of the deserts east of the Indus—and the isolated hills of the pennisulas of Cutch and Kattywar, the first extensive mountain chain is that separating Gujarat from the states of Central India. These hills

rising in the neighbourhood of Mount Abu, and stretching southwards to the valley of the Nerbudda, may be considered as an extension of the Aravalli range. From the valley of the Nerbudda, still extending towards the south, run the hills known as the Western Ghats or Sahyadrs range. This great range of hills, stretching southwards for upwards of 500 miles, forms the great characteristic feature of Western India, running parallel with the whole coast at a distance of from forty to fifty miles, with a general elevation of unwards of 1,800 fect, they contain individual peaks rising to more than double that height, and extend over a belt of country in many places not less than twenty miles in breadth. Their western declivity is abrupt though not generally precipitous, the land at their base being but slightly rused above the level of the sea. The landward or eastern slope is gentle, the crest of the range being in many places but slightly raised above the level of the plateau of the Deccan. Towards the northern extremity of this range. the country is rugged and broken, and contains isolated peaks and spurs which run eastwards, forming watersheds for the great rivers of the Deccan, the principal continuation to the eastward being the Satpara range, separating, as far as they extend, the valley of the Tapti from that of the Nerbudda, and the district of Khandesh from the territories of Holkar, and attaining an elevation of over 5,000 feet,-Torin Mall, on this ringe, in the vicinity of Dhulis, being about 5,434 feet at the summit, and 4 304 feet at the lake-and the Satmala or Asanta hills, separating Khandesh from the Nizam's territory on the south This last range is of less importance, being rather the northern slope of the plateau of the Deccan than a distinct range of hills.

In proportion to its area, the Bombiy Presidency has the advantage of an extensive line of coast, regular and unbroken save by two deep intests—the gulfs of Cambay and Cutch,—and extending from Honawar in North Latitude 14°3, to Karachi in North Latitude 25°. This coast is for the most part rock bound and difficult of access, and though it contains many estuaries forming fair weather ports for vessels engaged in the coasting trade, Bombay, Karachi and Karwar alone have harbours sufficiently landlocked to protect shipping during the previous for the south west monsoon

The chief river of Western India is the Indus, with a course from Attack to the sea of o62 miles. In the dry season the surface water varies in breadth from 500 to 1,600 yards. The greatest depth is found between Kalabagh and Attock, where it is 186 feet The season of floods begins in March and continues to September, the average depth of the river rising during the inundation, from nine to twenty four feet, and the velocity of the current increasing from three to seven nules an hour. The discharge of water, which in December is calculated at 40,857 cubic feet per second, is estimated in August, to attain to more than ten times that amount. Next to the Indus in length and in volume of water comes the Nerbudda Rising in the Central Provinces and traversing the territory of Holkar, this river after a course of 700 miles falls into the gulf of Cambay. forming near its mouth the alluvial plain of Broach, one of the richest districts of the Presidency For about one hundred miles from the sea, the Nerbudda is at all seasons may gable by small boats, and during the rains by vessels of from thirty to fifty tons burthen. The river next in importance is the Tapli, druning an extensive portion of country, and being from a commercial point of view, the most useful of Gujarat rivers Of other Gujarat streams, the Sabarmati rising in the northern, and the Mahi rising in the southern extre mity of the Mahikantahills, deserve notice, these rivers drunthe districts of northern Gujarat and fall into the sea near the head of the gulf of Cambay In the Konkan there are several minor streams rising in the Sahyadri range, and flowing westward into the Arabian Sea, which though formidable torrents in the runs, fall off in volume with the return of

fair weather, and during the hot season cease to flow Rising further inland, the Canarese trivers in the south have a larger body of water and a more regular flow than the streams of the Konkan, one of them, the Skerareaut, forcing its way through the western crests of the Ghats, plunges from the high to the low country by a succession of falls, the principal of which is 890 feet on the eastern side. The Godarari and Krishna tivers using in the Sahyadri range, and collecting to themselves several tributary streams, some of them of considerable magnitude, drun the entire plain of the Deccan as they pass eastwards towards the Bay of Bengal

With the exception of the Manchar lake in Sind and the Rann of Cutch, this Presi dency is almost entirely without natural lakes situated on the right bank of the Indus in the neighbourhood of the town of Sehwan, in district Karachi, the Manchar lake, when fed by the waters of the river during the months of flood, attains a length of twenty miles and a breadth of ten, covering a total area estimated at 180 square miles. The most peculiar natural feature of the Presidency is the Rann of Cutch, a salt marsh, an inland lake, or an arm of the sea according to the season of the year Rann, divided into two portions, the greater and lesser Rann, has been estimated at about 0.000 square miles It forms the western boundary of Gujarat, and when flooded during the rains, by uniting the gulfs of Cutch and Cambay, converts the state of Cutch into an island. In the dry season the soil is impregnated with salt, the surface in some places being moist and muddy, and in others like a dry river bed, or sea beach strenn with gravel and shingle. Opinions are varied as to the formation of the Rann and its character, its present condition being probably the result of some natural convulsion Rann to the north is about 160 miles from east to west, and 80 from north to south, and the little Rann to the east, 80 miles from east to west, and from ten to forty broad Two artificial sheets of water, from their size, deserve a place among from north to south the lakes of the Presidency, these are Vehar in the neighbourhood of Bombay, and Karak wasla near Poona. The former situated about 16 miles distant from Bombay in a group of hills near Thana, supplies water to the city of Bombay, and has an area of 1,400 acres, the latter supplying water to Poona and irrigating the country in its neighbourhood, covers an area of 3,500 acres

The wooded tract of country known as The Dangs, is a rough mountain region, lying between the table-land of the Khandesh district and the seaboard plains of Gujarat, this tract, with the district of Kanara in the south, is almost entirely devoted to the production of truber

Ahmedabad station of the Bombay, Baroda and Central India line, and open for traffic up to Palanpur and Deesa The Sind, Punjab and Delhi Railway from Kurrachee to Kotri, connecting with the India Valley State Railway line running from thence to Bahawalpur and Mooltan, while surveys of lines to connect the Sind Punjab and Delhi line with the Bombay, Baroda and Central India Railway, as well as for the extension of the Madras Railway from Bellary to Karwar Lai Hubli, with a branch to Goa, and from Wadhwan through the peninsula of Kattywar, have been completed The Kandahar State Railway, from Rul. Station near Sukkur on the India Valley line, passing through Jacobabad and Sibi, to be eventually extended to Kandahar, a distance of about 400 miles from Rul, with branches to Quetta, and to Pir Chauki at the foot of the Bolan pass, is now completed to about twenty miles beyond Sibi, the surveys for the remainder of the line to Kandahar being in progress.

In Sind, the Delta of the Indus is scored with numerous inundation canals, no less than 163 in number, and of a total length of 5,643 miles, irrigating an area of upwards of two million acres, twelve of these canals, of a length of 1,287 miles, he on the right bank of the river, and one hundred and fifty one, of a length of 4,256 miles, on the left bank. The chief of these canals are the Begars, 148 miles in length, and the Desert canal, 60 miles, in the Upper Sind Frontier district, the Sind canal, 67 miles, the Sakkar canal, 127 miles, the Deharwa, 45 miles, the Masuah, 32 miles, the Maharon ah, 37 miles, the Korawah, 23 miles, and the Arorwah, 21 miles, in the Shikarour District, the Ghar canal, 283 miles, the Nara, 217 miles, the Wahur, 38 miles, the Mittrau, 141 miles and the Thar canal, 52 miles, in the Thar and Parkar district, the Hiderabad district canals, 1,760 miles, the Mehrab, 61 miles, the Nasrat, 72 miles, the Naolakhi, 137 miles, the Dambro, 58 miles, the Rhein, 141 miles, the Alibhar, 75 miles, the Great Marak, 212 miles, the Gharo, 267 miles, the Sarfraz, 102 miles, the Fulals, 994 miles, the Mulchand, 64 miles, and the Chandan, 24 miles, the Kurrachee district canals, 1,360 miles, the Western Nara, 37 miles, the Phitu, 27 miles, the Kalri, 136 miles, the Bagar, 125 miles, the Pinjari, 410 miles, the Satuh, 58 miles, and the Khantah, 70 miles Other portions of the Presidency have irrigation channels of a smaller class, the chief of these are, the Table capal in Surat, the Panthra and Jamda canals in Khandesh, the Palkhed and Widils canals in Nasik, the Ojhar, the Lakh, the Mutha and Nira canals in Ahmednagar, the Revars, the Yerla, the Gondauls and Krishna canals in Satara, the Gokak canal in Belgaum, the Hathmati and Sabarmati canals in Ahmedabad

Climate and Sanataria.

In a territory extending through so many degrees of latitude, contribung low lands in merr the coost and elevated plateaux remote from the ser, while receiving in its mor, southern parts the full force of the south west monsoon, extending northwards beyond its influence, great varieties of climate are met with. In Upper Sindh, the extreme dry ness and heat, combined with the aridity of a sindy sel, make up a climate resembling that of the sultry deserts of Africa. The mean maximum temperature at Hyderabrd in lower Sindh, during the six hottest months of the jerr, has been given a muerty eight in the shade, while the water of the India reaches blood heat, in Upper Sind it is even hotter, the thermometer being known to register 130° in the shade. In Cutch and in Guyarat, the heat though less, is also very given The Konkan is hot and moist, the full of rain during the monsoon sometimes nearly approaching 300 inches. The table land of the Decent-whose the Ghits on the contrary has a very acceable chinate, as has also the southern Marathi country, and in the hills of Mahriblishwar,—where there is a

trol of a Commissioner, and courts for the administration of civil and criminal justice municipal matters and taxation within the town limits being entrusted to and managed by a Chairman and Board of Justices specially appointed.

Census

A general census was taken throughout the Presidency on the night of the 21st February 1872 giving a population of 16 199 144 souls in British territory the average dens ty for all the collectorates being 129 persons to the square mile, and varying from a maximum of 20 or in Bombay city, to 14 in That and Parkar in Sind Of the total population. Hindus constitute seventy six per cent. Mahomedans seventeen per cent. Aborigines three and a half per cent., and the remainder, 115, Christians Parsis Buddhists and others three and a half per cent. The proportion of males to females being fifty two to forty eight more than three-fourths of the entire population are Hindus their maximum number is in Satara their minimum in the Upper Sind Frontier districts The Mahomedans preponderate in Sind, and their minimum number is in the Panch Mahals district. Except in Sind the Buddhists are widely scattered through all the Collectorates. The Christians are chiefly in Bombay city Poona and Thana. The Indo Portugese and Native Christians form nearly one-half of the entire Christian population Two thirds of the entire Parsi population is in Bombay city alone and of the remaining third, one half is in the city of Surat The Aboriginal tribes are chiefly in the collectorates of Surat Khandesh and Nasik.

sanitarium,—of Singarh and other detached heights, Europeans may go out at all hours with impunity. Bombay island itself, though in general cooled by the refreshing sea breeze, is oppressively hot during May and October. The south west monsoon generally sets in about the first week in June, and pours a prodigious quantity of rain along the coast, from June till October therefore travelling is difficult and unpleasant, except in Sind, where the monsoon rains exert no influence. The Sanataria of the Presidency will be found in the list of the initiary stations.

Staples and Manufactures.

Agriculture is the chief employment of the bulk of the population in this presidency. The ordinary natural productions are cotton, noe, the Indian millets, barley, pulses and grain of every kind, potatoes, sugar cane, coffee, red pepper, oil seeds turment and tobacco. Coal is found in Cutch, and indigo, hemp, jute and other fibres are produced in Sind and the Konkan.

The principal manufacture of the Presidency is that of cotton, for which there are now forty two mills, and about 2.550 gins, chiefly in Bombay. Guiarat and Khandesh In addition to the cotton mills, one jute and two silk mills are at work in Bombay, where Chinese silk workers have also begun to establish themselves and do a thriving business. Dveing, tanning working in metal, and the manufacture of indigo, sugar, paper, soap and glass are also carried on, but to a limited extent In Sind, the chief manufacturing district of which is Hyderabad, blankets, carpets, rugs, leather work, gold and silver work, cutlery and ivory toys, are manufactured, while in the villages along the whole length of the coast, the fishermen cure and export large quantities of fish Pottery is made everywhere for local consumption and use The forests contain valuable timber, gums, drugs and dyes, also cocoanuts, from the kernel of which oil is largely extracted, and coir fibre from the outer husk. The Bombay box work made in Bombay and Surat, gives employment to several hundred workmen, carving in sandal wood, ebony and black wood is also carried on Though deficient in mineral wealth, the Presidency is abundantly supplied with stores of stone fitted for building and road making purposes There are large limestone and slate quarries, and iron ore is mined and smelted in the Dharwar, Belgaum and Kurrachee districts while the adjacent hills in Baluchistan near Kurrachee are reported to produce a variety of minerals, such as gypsum, copper, lead, antimomy and sulphur

trol of a Commissioner, and courts for the administration of civil and criminal justice municipal matters and taration within the town limits being entrusted to, and managed by a Churman and Board of Justices specially appointed.

Census

A general census was taken throughout the Presidency on the night of the 21st February 1872, giving a population of 16,199,144 souls in British territory, the average density for all the collectorates being 120 persons to the square mile, and varying from a maximum of 20,201 in Bombay city, to 14 in Thar and Parkar in Sind Of the total population, Hindus constitute seventy six per cent, Mahomedans seventeen per cent, Aborigines three and a half per cent., and the remainder, viz . Christians, Parsis, Buddhists and others, three and a half per cent. The proportion of males to females being fifty two to forty eight, more than three fourths of the entire population are Hindus, their maximum number is in Satara, their minimum in the Upper Sind Frontier districts medans preponderate in Sind, and their minimum number is in the Panch Mahals district Except in Sind, the Buddhists are widely scattered through all the Collectorates Christians are chiefly in Bombay city, Poona and Thana. The Indo Portugese and Native Christians form nearly one half of the entire Christian population Two thirds of the entire Parsi population is in Bombay city alone, and of the remaining third, one half is in the The Aboriginal tribes are chiefly in the collectorates of Surat, Khandesh city of Surat and Nasık.

THE FRENCH TERRITORIES

THE French territories in India consist of several detriched portions, all subject to the jurisdiction of the Governor residing at Pondicherry, to whom the general government of these possessions is confided. Their total area is 178 square miles, with a total population of 271,460 souls. The several settlements are as follow.

IN BENGAL

r CHANDERNAGORE—Area about three square miles or 2,330 acres Lautude of town 27 50 N., Longitude 85° 23 E. Distrace from Calcutta seventeen miles north. The settlement of Chandernagore has on the right bank of the Hooghly river in the district of Hooghly. The population numbers about 22 600. Chandernagore appears to have been in the occupation of the French 32 early as 1700, the year in which Calcutta first became a British settlement. Forty 5 earls later the settlement attuned a high degree of opulence and splendour, which it retained until its crypure by Clive in 1757. France recovered Chandernagore with the rest of her settlements in India, under the treaty with England of 1763. It was again taken by the British 1793, and fanally restored at the general peace of 1816. The principal production is optim

IN MADRAS

- 2 MARIKAL—Area fifty two square miles. Population 91,468 Latitude of town 105 g1 N Longitude 79 57 E. Distance from Tanjore forty-seven miles north. This settlement lies within the district of Tanjore in the Madria Presidency, and is situited on the Coromandel Coast of the Bay of Bengul, on a small estuary of the river Cauvery. It has several large manufactories of cotton fabries, and carries on an active trade in rice, which is its principl production. This territory was restored at the general peace of 1816, on the condition that no fortifications should be recreted thereon, and no multary retained, but such as may be required for purposes of police.
- 3 MAHE—Area five square miles Population 8,469 Latitude of town 11 42 N, Long today 75 E.D. Distance from Tellicherry seven miles. A settlement on the coast within the district of Malabur of the Madris Presidency, and situated on the south side of the estuary of a small river flowing from the Western Ghats, and navigable for boats a considerable distance inland. This place was taken by the British in 1793, and restored to the French at the general peace of 1815. The Cirmelites have a church and a missionary establishment here.
- 4. VANAON or YANAN—Area five square miles or 3.147 acres Populating 5,460. Latitude of town 16'44' N. Longritude 82'16 E. A settlement within the God warf district of the Presidency of Madras, and situated near the britreation of the Godwarr inver, and the river of Coninga, and about nine miles above the embouchure of the former. The Coninga river has a deep channel which admits of vessels of 200 tons burthen proceeding as high as Yanaon This territory stretches along the banks of the two rivers for a distance of six miles
- 5 PONDICHERRY—Area 113 square miles Population 143 500 Latitude of town 117 55N, Longitude 79' 56 E. Thu territory consists of, first, the district of Pondicherry proper, containing, besides the town, eleven villages, second, the district of Vallanor of forty five villages, third, the district of Bahour of thirty six villages. The chief exports are fine blue cottons and cotton yaar. The settlement is included in the district of South Arco of the Madras Presi dency, and is situated on the Coromandel Coass of the Bay of Bengal, at the mouth of a small river cryable of admitting only constitute graft of small burther. The Governor of Pondicherry rules over the whole of the French settlements in India. The town is pleasantly situated and healthy, and contains a population of about 4000, and is district from Madras about eighty six miles south It is connected by Railway with Madras. Pondicherry being the principal seat of Government for all the French settlements in India and Indo China, matters of importance are negociated through the Collector of South Arcot. Minor matters, however, at the outlying stations of Karikal, Yanaon and Mahe are dealt with by the Collectors at those places without reference to Pondscherry.

THE PORTUGUESE TERRITORIES.

The only settlements now left to the Portuguese, of all the vast territories which were once under their rule and influence in India, are Goa, Daman and Diu, containing a total area of 1,096 square rules, and a population of about 407,700 souls. The following description of these places will suffice—

- GOA -Area, 1,062 square miles Population, 363 780 Revenue, Re 7,20,000 Military force, about 3000 The territory of Goa hes on the western or Malabar coast of India in the Bombay Presidency, and is bounded on the north by the native state of Sawant Wari, on the east by the districts of Belgaum and north Canara, and on the west by the Indian Ocean The Principality is about sixty four miles in length from north to south, and twenty in breadth from east to west. Two thirds of the population are stated to be Chris tians of the Roman Catholic persuasion The settlement is divided into two districts, Salsette and Bardes, which are again subdivided into parishes, the largest of which is Pangaum or Panism containing the present seat of Government The new town, Panism, or Villa Nova de Goa, containing about 20 000 souls, chiefly of Portuguese descent, is situated at the entrance of the harbour, and is defended by several fortresses, one of which, called Algoada, stands close to the shore, on the point forming the north extremity of the bay The harbour, formed by an arm of the sea into which flows a small river, is distant about five miles from the old city of Go2, which is now almost entirely deserted. It is connected with the new city by a stone causeway about 300 yards long Old Goa contains many fine buildings, churches and monasteries, but it is fast becoming a mass of deserted ruins. The inhabitants are almost entirely ecclesiastics The chief products of the territory are rice, only in sufficient quantity for the consumption of the inhabitants, hemp, pepper, cocoanut, betel nut, and salt, which latter article is manu factured to a very large extent The territory is well watered, fertile, and in most places well cultivated, Latitude of new town 15° 29 N Longitude 73° 53' E Distance from Bombay 260 miles
 - 2 DA ILAN—Area twenty two square miles Population 33 to. The district of Daman, in the Thana district of the Bombay Presidency, is about seven miles in length from north to south, and four in breadth. The capital or town of Daman is situated on the Damanganga, or river of Daman which riese in the Western Ghats, or about 40 miles further east, and is fortified, having a rampart with ten bastions and two gateways. The fort is called the castle of St. Harnonym. IS Daman is an excellent place for small vessels to remain at during the south west monsoon and for the purpose of repair, the country being well stocked with ship timber. Provisions and vegetables are cheep and plentiful. Daman was sacked and burned by the Portuguese in 1531, it was subsequently rebulk and taken by the Portuguese in 1558, since which time it has remained one of their possessions. Latitude of the town 20° 21 N., Longitude 72° 53 E. Distance from lomby y for miles
 - 3 DIU—Area twelve square miles Population to 755 Lattude of town 20° 42° N, Long; tude 71° 18° Distance from Bombay 170 miles Dui is an island on the south coast of the pennsul of Katiywar, in the Gujarat province of the Bombay Presidency The Portuguese do timed poissession of the place in 1515 The town is situated at the eastern extremity of the island which extends from east to west about seven miles and north to south about two miles The soil of the island being itself little productive, vegetables and other provisions are brought from the munitud. The chrimel between the island and manisand is navigable only for fishing bests and other small craft, the western entrance, which is defended by a fort, having four of fise feet of water on the bar when lowest. The town is well fortified, being surrounded by a will strengthened with towers at regular intervals. Notwithstanding the excellence of the harbour for shipp of moderate draught, there is but little traffic. Du head, two miles to the westward of the west end of Du island, has on its east side, a small harbour where vessels "right to scheitered from the westerly winds, in from two to three and a half fathoms."

BRIEF GENERAL DESCRIPTION

AFGHANISTAN-This so-called country extends from the Punjab on the east, to Persia on the west, and stretches down from the Amu Dana or Oxus river on the north to the frontier of Baluchistan on the south. On the north, the boundary of the country as known to us at the present day, runs along the river Oxus or Amu Daria, (culled also Ab 1 Panjah at its head) from lake Victoria (Sir 1 Kul) at its source in the great Pamir plateau, to khoja Saleh, there leaving the river with a slight southerly curve, it goes across the Dasht i Chul desert to Robat Abdula Khan on the Murghab river, and thence on to Sarakhs on the Hart Rud or Tajend river, where it touches the I ersian frontier On the west, starting from Sarakhs, the boundary follows the course of the Hari Rud to a point near the village of Toman Aga, where it leaves that river and runs due south for about eighty indes. and then follows a strught course to the Cha Sagak pass (3 800 feet above sea level), from thence it turns off in a south-easterly direction for about twenty miles, and then runs due south to a point about five miles east of the village of Bundan in Persian territory, from thence it again turns in a south easterly direction, passing through the Hamon swamp to the mer Helmand, which marks its course for about thirty miles up to the town of kuhak, whence it turns off in a direct south westerly course to the peak of Auh Malik i Siyah, its extreme south western limit. The southern boundary touching on Baluchistan is not so definite, but may be said to run through the sandy desert, along, or in the vicinity of, the parallel of 30°, up to within thirty or forty miles of Quetta, whence it turns in a north-easterly direction, beyond which it is for the present unknown The eastern boundary has always been considered conterminous with the British line of the Punjab frontier The extreme north-eastern limits up to lake Victoria. are entirely unknown. It may be as well to mention here, that the country along the eastern frontier of Afghanistan, between the Punjab and the Koh Jadran or Kohnak range of hills on the west (sometimes called the Western Suliman range), and northward up to the Kurum valles, contains numerous tribes who do not, and it is believed never did, own allegiance to the sovereign of Kabul. The whole drainage of this part of the country containing these independent tribes, flows into the Indus. In the extreme north-east direction also, in the country to the east of the Kun ir and Chitral valleys, there exist tribes and states more or less independent, and who it is believed have always disclaimed the authority of the ruler of Kabul, excluding these independent portions, the remainder of the country of Afghanistan includes the whole dramage of the Kabul river up to British territory, the whole dramage of the Helmand river, the whole drainage to the Hamun swamp from the north, the whole eastern drainage of the Hari Rud, and the country drained by the Murghab south of the supposed north western boundary, as well as the country drained by the southern tributaries of the Oxus, 71", the Sangalah, the Sar's pul, the Balkh, the Khulm, the Kunduz, the Aksaras, and the Vardos streams. The Orus is navigable to Khoja Saleh, and it is believed that it will prove to be omic navigable up to its confluence with the Kanrathan near Khulm and Lundur. The drain age of the Helmund and its imbutaries the Arghandab and the Tarmak is lost in swamps on the west, and on the north the Murghab and Hara Rud flow into the Kara Kum desert north west of Mers or Naukala and disappear there, being absorbed into the soil.

The Kabul river, a tributary of the Indus, after a course of about 2,0 miles falls into didus at Attock. The principal feeders of this river are the Swat, Lendai, Kunar or Chitral, Alingar, Alishang, Tagao, Niyao, Panjahr and Ghorband from the north, the Logar Teim, Surkhab, Barr, and Tirah from the south The other minor rivers of the country ine Farah Rud, Lori, Kutam, Gomil, Shabhand and Arghesian The Haruni swamp above alluded to is situated in the province of Sistan on the south west border of Afghanistan, it is about seventy miles in length and about twenty fix emiles in breadth, with a depth of from three

From fort Petro Alexanurofik to Charjus the distance of 195 to be was steamed to 14 days inclusive of stoppages. From Charjust to Khoja Sash 170 mbe. was reached by scenare to I days. The who e downward to 10 fort Petro Assessment's from kho a Sash was pe formed in 0 days by the same steamer.

to four feet, there is another lagoon called Ab Istada, sixty miles south west of Ghazni, about twelve miles in breadth, and four feet in depth, the water of both these lagoons is salt

The area of the whole territory is about 300 000 square miles. It includes a succession of ridges and valleys, the latter being irregular, and the ridges occasionally rising into lofty mountums or expanding into plateaux. Starting from the Karambar and Baroghil passes on the extreme north east, at the head of the Chitral or Kashkar valley, Afghanistan is traversed by several lofty ranges of mountains, 732, the Hindia kush range terminating at the Haji khak pass, the Koh i Baba range, the Siah Koh (black mountains), the Safed Koh (white mountains), the Triband i Turkestan, the koh Jadran or Kohnak, the Western Sulmans) and the Eastern Sulman range. The highest summits are in the Hindia Kush range in the north, which sometimes exceed 70 000 feet, many of the passes across the hills being more than 10,000 feet. These mountains are the great water partings between the basins of the Indus, the Oxus, the Murghab, the Hari Rud, the Helmand and its tributaries, the Arghandab and the Tarak.

Although by far the greater portion of Afghanistan is a region of desert, rocks and naccessible mountains, it is however, interspersed with several well statered and fertile vallets, yielding all the ordinary crops and the finest fruits and vegetables in abundance. In the forests, there are many of the trees common in Europe, and some others peculiar. The asafocitad plant grows in great luxurance, and the Pine flourishes on the mountain sides up to a height of 1000 feet, while Oak, Walnut, Birch and other trees grow at lower altitudes. In many parts, the climate brings to perfection many tropical productions. The valley of the kabul river appears to be the most important part of the country, to the south is the fertile district of Logar, dramed by the river of that name a tributary of the kabul, to the north is the koh; i daman, also fertile and highly cultivated and to the east is the valley of Jellalabad. There is also an exceedingly rich and level tract in the vicinity of Herat and kandidad.

The mineral wealth of the country is considerable, silver, mercury, copper, animony in lead and sinc, are all present, some in abundance, while gold is found in many places. There are indications of coal also

The principal marts of the country are Kabul, Kandahar and Herat, and a considerable foreign trade with India, Persia, Chinese Turkistan, Bokhara and Baluchistan is carried on The manufictures are unimportant, consisting chiefly of shawls and other woollen fabrics, which last are seldom exported. The whole commerce and carrying trade of Afghanistan is carried on by the Lolianis, (Povindahs) a pastoril tribe of Afghanis who occupy the country eastward between the Western Sulmans and the India.

The climate of Afghanistan, though varying greatly in different parts, is on the whole chriacterised by dryness and great extremes of temperature. In Cabul and Ghami the cold is intense and snow lies on the ground for three months in the winter than that of Spain or Italy, the severity of a Russian winter is endured. In Jelliabad, however, where the elevation is nearly 2,000 feet above the sea, the winter is as mild as in Hindus in. The heat of summer is everywhere great, and in some places higher than in Bengal At Kabul 6 500 feet above the sea, the thermometer ranges from 90° to 100°, in Kandahar it 15 even higher.

5 000 000 and of these perhaps one and three quarter milion are true Afghans, who are how ever, in a simular position to the Turks in the Ottoman empire and like them generally armed and trained for war, the remainder are Puthans proper and non Afghans, generally traders and agriculturists. To take the Afghans in the order of their relative importance we have first the Kristiaharks, adscendants it is said of military colonies left by Nadir Shah when he overran the country. They are modern Persians of mixed Persian and Turkish descent, numbering about 150 000, but from their courage, weith and enterprise of far more consequence than a much larger number of any other race in the country. They occupy a large and weithy quarter of the city of Kabul, and fill important posts in the civil administration of the country, they are bold and skilful horsemen, intelligent, orderly and amenable to discipline. In religion they are Mahomedans of the Shah persuasion and speak Persian.

Allied to the Kuilbishes in language are the Tophs supposed to represent the original Persian inhabitant of the land. They number about hif a mihor. The large tract of hilly country extending from the Koh i Baba near Kabul, to Herit, and nearly down to Zamin diwir on the south, is called Hairia. This portion has always been almost entirely independent of the ruler of Kabul and no Afghan can pass through it. The more accessible of the Hiraria districts, betweet Girishi, and Herat, only from fear of the Kabul atmose pay the Amir thoute. It is occupied by tribes of Tartar origin called Hairias, and towards the south west, Aimaks, and number some 400,000, they are chiefly a pastoral people dwelling in secluded villages, or wandering over the hills and living on the produce of their flocks and herds, and reta ming in many places their necent customs and hubits unchanged since they came from the highlands beyond the Oxus. The majority speak Persian and profess the Shih Mahomedan fauth

Prssing into Afghan Turkistan, which comprises the districts between the Oxus and the Hindu Kush Koh i Buba and the Tirband i Turkistan mountrins from the Mur, hab to the Prints, e.g., the Kirnates of Mrimana, Shibarghan Bulkh Khulin, Kunduz Brickishan and Wakhan, we find the ruling rice to be Oxers, who in some parts form the bulk of the population. In Badhishan, Wakhan and other remote places, the populace is still Tay for remnints of the aborn, and races, and the Afkhrus have only occasionally appeared as invaders and plunderers, but the memory of their presence is generally, sufficient to enforce the payment of a tribute to K-tbul. The Oxbegs Taylas and other inhibitiants of this country are estimated at about 640 000, the Oxbegs being originally intruders who crossed the Oxus and subdued the Taylas, to be themselves conquered in turn by the Afghans.

 Separated from Afghan Turkistan by the Hindu Kush are a number of valleys mostly well watered and fertile, running generally from the mountain range to the Kabul river To the west and north of Kabul, the spurs and valleys are inhabited by the Achistanis or mountaincers, wild tribes of perhaps mixed origin, turbulent and treacherous, nominally subject to Kabul, but ever ready to take advantage of a weak Government. Tast of these and extending to the snows of the Hindu Kush is Kafiristan inhabited by a fur, interesting and somewhat mysterious people, called the Stakpash Kafirs (black clothed unbelievers), who seem to be one of the earliest off shoots of the Aryan race, or more correctly speaking perhaps part of the ong nal stock itself, who have remained for ages in or near their original home. I ew Europeans have seen any of this curious race. They themselves claim descent from Alexander the Great and it is possible that some of the Greeco Bactrians, when driven from the cities in the valley of the Kabul river. may have sought refuge in this almost inaccessible region and have been absorbed by the old population. The Kafirs have some distinctively Luropean customs, as sitting on chairs and Up to the present time they have resisted all the attempts of the Afghans to sub due and convert them to Mahomedanism, though those who live on the borders have had to submit, and are called "Nimchas" which may be taken to mean half Mahomedans. In num bers the Kafirs with Nimchas and Chitralis are thought to be about 150,000.

To the east of kafinstan are the kunar, Bayaur and Swat hill men, apparently not of Afshan origin, but Afshan in larguage and other respects. Lake their neighbours the Monmads, they take little interest in kabil politics and care only to preserve their own inde

pendence East and south of these again are the Yusufraies, one of the principal Afghan clans, who live partly in a state of independence and partly in British territory

If we now turn to the west we shall find in the sandy wastes of Sistan, nomads of various and wild freebooters in a state of anarchy and misrile. North of Sistan, the western frontier is formed by the important province of Herat, where the population is purely Persian, the rulers and garrison only being Afghans. Of the Afghans themselves there may be between one and a hilf and two millions in Afghanistan, specifing for the most part their peculiar lan guage. Pushtu, of the same family as Sanskrit, though essentially distinct, and being Mahome dans of the Sunni persuasion. They are divided into clars, as the Momands, Gulziais, Afndis, Duranis, &c., each of these being again subdivided into many smaller tribes.

Afghanistan in fact may be compared to the Turkey of fifty years ago, the Afghanis re precising the Valdomedans, the Kirilbashes and Tajiks being likened to the Greeks and Armenians, and the independent Kafirs and Hazaras to the Montinegrins and Servians

The chief towns of Afghanistan are kabul, Ghazni, Kelat i Ghizai, Herat, kandahar, Balkh, khulm, Khanabad Indarab khinjan Narin, Takhtapul, Andhkui, Sur i pul, Meruchak kunduz, Maimana, Jellalabud, Chitril Dir, Girishk, Bamian, Shibarghan, Fairabad, Sabzawar, Pishin, Lash, Jowann, Farah khash and Ghurian

Afghanistan communicates with India by various passes, the chief of which are the KT aibar commencing near Peshawar and extending through hills about thirty miles to the plans of Jellalabad, the Shutargard in vid the Kuram valley and the Jag tallal pass through which the road from Jellalabad to Kabul 111 Gandamak passes Several other passes also lead into Afghanistan across the Eastern Suliman range from the Derajat of the Punjab, through which the Poundahs or trading class of Afghans convey their goods, the chief of these are the Sakhi Sarwar, the Chachar, the Ghuleri or Gomal, the Draban, the Shangar, the Kaura and the Vihova There are several passes over the Hindu Kush range into Afghan Turkistan, of most of which very little is known beyond the names, the principal are, the Buroghil pass (12 000 feet) leading into Wakhan from Chitral, the Dora (16,000 feet), the Khurtuza, the Nuksan (17,000 feet), the Agram, the Ishtirak, the Anjuman, the Khawah (17,200 feet), the Buzarak, the Parwan, the Salanlang (12,000 feet) the Kushan, the Gwalan, the Gwazyar, the Chardarya, the Ghalalaj, the Faringal, the Hajikak (12,000 feet), the Una, and the Shibr The whole of the passes are free from snow about the end of June, but the most elevated peaks continue covered throughout the year An extension of the railway from Peshawar to Kabul has been mentioned, to follow the course of the Kabul river, but it is doubtful whether ? line could be carried along that route or if it can be constructed at all in that direction. The Railway to Kandahar has already been referred to under 'Bombay Presidency'

The capital, habit, 6 500 feet above sea level, is encompassed by hills on three sides, and is situated in a gorge where the habit river breaks through a ringe or spur from the Paghman hills. The modern city with its suburbs is extensive and reaches across to the north bank of the river. On the east side is the fortress of Bala Hissar on a rocky height. The population is about 75,000 and 100 feet and 100

AFGHAN ETHNOLOGY

A paper by Mr A H Keane, published in " Nature"

DURING the empire of the Sussandes the whole of the region, from Persia proper to the right bank of the Indius, and from the Koh i Blaba, Ghor and other western continuations of the Hindu Kush to the Arabian Sea, was known as khorasan, that is Khoristan, the Land of the San, or the East This term with the gradual reduction of the Persian sway, has shrunk to the proportion of a province on the north-castern frontier of Persia, and his been repliced further east by the ethnical expressions Afghanistan and Bluchistan, the lands of the Afghanis and Bluichis But these expressions, as so forquently happens, are so far misomers and deceivings, that the lands in question harbour many other peoples besides those from whom they are now named. In Balochistin, for instance, the most numerous, powerful, and influential element is

not the Baloch at all, but the still unfathomed Brabût, from which circumstrince it has even been suggested that the country ought rather to be called Brahustan. A similar suggestion could not certainly well be made with regard to Afghanistan, for here there is no other people who can for a moment compare with the Afghans and Pathins in numbers, or political importance Still the subjoined rough estimate of the population, according to nationalities, will show that it is very far from being homogeneous—

Afghans and Pathans	Iranian stock	3 570 000
Tajiks	Iranian stock	1,000 000
Hindkis	Hindu Stock	500 000
Hazaras and Aimaks	Mongolo Tartar stock	600 000
Kataghins	Tûrkı stock	200 000
Badakshis	Galcha stock	100,000
Balochis	Iranian stock	100,000
Kızıl Bashes	Türkı stock	75 000
Kohistanis and Siah Posh	Galcha stock	50 000

6 145 000 *

It will be noticed that in this table are included all the races forming part of the present Afghan political system taken in its widest sense whose northern frontier is now marked by the upper course of the Oxis. Before dealing with the Afglans proper, with whom we are chiefly concerned, a few words may be devoted to each of the minor elements, all of whom continue to keep aloof from their neighbours, seldom or never intermarying and mostly retaining their own national customs dress religion and speech. No general analgamition has in fact, yet taken place of these heterogeneous ingredients so that we cannot speak of the Afghan in the same sense as we do of, for instance, the Italian French, or English nations. The Afghan race, though by far the most numerous, has been politically predominant only since the death of Nodir Shah (1/47), and its rule has been far too checquiered by intestine strife and foreign troubles, to have allowed time or opportunity for the slow process of absorption to have made any perceptible progress. Next to them by far the most important are.

The Tayles, who here as elsewhere in Central Asia, represent the old civilised Iranian communities, co-extensive with the former limits of the Persian empire, but since the ascend ency of the Türki Mughul, Afghan, and Braliui races now forming politically the subject, socially the settled trading, and agricultural elements in these regions. Persian or some extenty of it, is still every where their mother tongue, hence in Afghanisan they are collectively known either as Parsivan *e*, Persian speaking or Dehgan *e*, persiants or agriculturists. "The Trylisk are Iranians, a remnant of the old Persian population subdued by the Afghanis, but still speaking Persian and retaining the Persian type of features." (F. von Stein, in Petermann's Matthellumere for March, 1870) religion, Sunnite Remotels allied to them are—

The Hindkir of Hindu stock, who have been long settled here chiefly as triders, forming moreous communities, especially in the eastern districts, said to be mostly of the Shitri caste, religion Brahminical, speech Hindustani

The Ha area and Arrack, occupying the northern highlands between Briman and Henri, the former in the east, the latter in the week, are undoubtedly of Mongolo Tartra stock, though now sperking rude Persian dialects. They claim descent, some from the Toghiani Torks, some from the Koreish Arabs, others from the old kibit race, but seem really to be military colonists settled here by Jinghis khán, Manku khán, and Timur. The Airmisk, the term simply mems horde, tribe, clun), are of the Sunni, the Hazaras of the Shinh sect and are consequently fercely opposed to each other. Owing to this circumstance they have often been regarded us of different races, but "there seems no reason to doubt that the Airmisk and Hazaris are the same people though separated by the different sects they have doplement (COL C. M. WacCregor, 'Afghanistan,' p. 446), type, high cheek homes with small grey eyes,

[•] The figure exects by about a m II on that usually given as the total population of Afghan tan. Fut record explications has shown that may be the trabes are much more numerous than had been supposed, and as our knowledge of the country necesses; we lipobably be found to contain even a greater population than latch there given.

semit beurd and low stature. The Annals occupy the Ghôr highlands, which must have been almost uninhabited when they settled there, for we read in the National Chronick that about 1190 A.D., Sultrin Shéhab ud din removed all the Afghan tribes from the Ghôr to the Gham highlinds, "in order to become the bulwarks of the seat of empire and hold in ave the infidels of Hindustan." Of the Annaks there are four main divisions, the so called "Char Aimak" ("Four Hordes"). Taemdins, Taemdins, Hazari Zeidnits, and Suris, with a total population, according to some authorities, of about 45,000, including those now settled in Khonasan The Haarara, numbering at least 15,0000, occupy the region stretching for 250 miles west from Kabulstan, and are divided into thirty eight main branches with numerous subdivisions, under chiefs bearing various titles, such as Khan, Sultru, Ikhirar, Vali, Mir, Mettur, and Tukhar, and huberto practically independent of the Durim Amirs. Alin to them are—

The Kataghants, a main branch of the Urbegs, forming the bulk of the population in Kundur and Brillh, that is, the region now known as Afghan Turkestan, stretching from the northern slopes of the Hindu Kush to the left bank of the Upper Oxus They take their name from a legendary Kata, from whom they claim descent in two main streams, the Beth bala and Cheguna, with five and elenen sub divisions respectively, each named after one of Katas sixteen sons Most of the tribes occupy the country south of the Ovus, but 7,000 firmlies are now settled north of that river, in Bolkhant territory, religion Sunnite, speech Türki, 17pc, small stature, broad face, high cheek bones, sparse beard, small oblique eyes, are now mostly settled agraculturists and traders

The Badakhikin, or natives of Badakhshan, in the extreme north east, beyond Kundur and abuting on the Pamir table land, are a pure Aryan rice, intermediate between the Inanans and Hindus, and of the same stock as the highland Tajiks, whom Ch de Ujfdivy groups under the collective name of Galchas Chief divisions, Darwazi, Roshdan, Shugadh, and Wakhi. or Wakhâni, religion Sunnite, speech Aryan, with Persain and Indian affinities. The Wakhi is a distinct variety, retaining many old Sanskinte elements, hence R. Shaw thinks it may be a relic of a printite organic Aryan language current here before the rice issued from the Pamir, or divided into Vedic and Zendic. It would be interesting to compare it with the Jignfold which Chi de Ujfaty tells us is unintelligible to the other Galcha tribes of Ferghāna. A Galcha skull which has found its way to Paris his been examined by P. Topinard, who pronounces it to be identical with those of the early Kellic Aryans. If their speech also should prove to be of organic Aryan type, as constituted previous to the dispersion, Ch. de Ujfalvy's view might be in reservedly accepted that "Ces pays insystems views registered in reserved to the Toring of the proposed of the control of the rice."

The Balochis, of Iranian stock, and regarded by the Afghans as their brethren, are represented in Afghanistan chiefly by a number of hill tribes in the south east corner, and by some nomads in the south and west along the Lower Helmand Most of them belong to the Rind section of the Baloch race, the more important being the—

Kasranis and Bozdars, on north west border of Dera Ghazi Khan numerous sub divisions,

the Boxdars alone with sixty four septs (Major Minchin)

Khosahs, south of Sanghar Pass towards Shikarpur, four divisions Kalulani, Bakiani,

Toniani, Sariani Laghdars, overlooking the Sakhi Sarwur Pass, Dera Ghazi Khan frontier, four divisions Aliani, Hadiani, Boglani, Habitani, fifty six sub divisions

Gurchanis, south of the Lagharis, about Chachar Pass

Maris, Sham district, east, north, and north west of Kachi, four divisions Ghazani, Loharani, Bijarani, Mazarani, twenty two sub divisions The Mazarani have separated from the rest, and are now settled west of Sib and north of the Bolan Pass

Bûgtis, south of the Maris, two divisions Firozam, Zarkâm, thirteen sub divisions

Kayânıs, Sıstân, former rulers of that country, by some said not to be Balochis, but Kâkar Afghans

Religion, Sunnite, speech, a rude, uncultivated variety of the old Persian, type, regular Caucasian features, light or brown complexion, hair often chestnut and even fair, eyes light

grey and sometimes blue, especially in centre and north. Of the many forms of the national name, Baloch, Biloch, Belüch, Balüch, Biloch, Belüch, &c., Baloch is the best, coming nearest to the true pronunciation, as Pottinger assured his French translator, M Eyriks

The Kril Buthet, or "Red Heads,' Lnown collectively as Gholam khani or Gholam i Shah, "senants of the king," are of Tuhi stock, and hive been settled in Herat, and the Gulkoh mountiums, but chiefly in khbul since the time of Nadir Shah. The term was originally applied by Shah Ismail to the Nikhlu, Jawānsher, and four other trusty Türki tribes to whom he oued his successes. But since then they have become a sort of brotherhood "much akin to the Beyyadiyah or "White Boys" of Oman, and bearing some analogy to the Mormons' (W. G. Palgrace, "Report on Province Trebrond,' 1868. Those of Kahul form three divisions the Jiwānsher, originally from Shisha, the Afshar, Nadir Shah stribe, and the Mordd Khani, composed of "all the other Türkis who have from time to time removed from Persia to Abbil, rehigion, Shiah, with secret rites, speech, Persian, and amongst themselves, Türli, are a very fine race, very fair, with an evident mixture of Iranian and Tärtar blood.

The Kohistanis and Siah Posh ('Highlanders" and "Black Clothes) forming the bulk of the population in Achistan, Swat, Kafiristan, Chitral, and generally of the southern slopes of the Hindu Kush down to the left bank of the Kabul river, are of pure Aryan stock, allied to the Kashmirians, but probably more closely to the Badakhshis and Wakhis. The Kohistanis are Moslem, the Sinh Posh still mostly pagans, hence called Kafirs, or Infidels, by their neighbours, and their country Lagrislan Their speech, of which there are ten distinct varieties (Major Tanner), is described as neo Sanskritic, akin to Dardu and Lughmani But it has never been critically studied, and may possibly prove to be pre rather than neo Sanskritic . is in any case of great philological interest, having been isolated from the kindred tongues since the cruption of Islam in the tenth century type, regular features, blue and dark eyes hair varying from light brown to black, broad open forehead, tall and well made But General A Alibot ("Correspondence," edited by C R Low, 1879) distinguishes between a fair type with blue eyes, the aristocracy "descended of the Greeks (?) and a very dark type, the aborigines The Kolustanus north and north west of Kabul, C R. Markham says, are mainly Tajuks (Proc, Geo Soc. February 2, 1879, p 117), but they are more probably of the kindred Galcha stock, for those of Swat are represented as closely akin to the Siah Posh whom I take to be of this race They form two main sections, the Torwals and Garwis. They have taken a large share in the recent events about Kabul The Safe, who have also lately been heard of in the same neighbourhood are simply Siah Posh converts of the Tagao valley Kunar district, north of Kabul, three divisions Wadin, Gorbaz, and Müsawid, speech Pashae, closely allied to Lughmanı and Kohistanı of Swat

We come now to the Afghans proper, whose original home seems to have been the Kabul valley, whence they spread westwards to the Ghor country, southwards to the Suhman mountains, and more recently down the Helmand and Arghandab valleys to Kandahar * They call themselves Banı Israel, ' Sons of Israel, claiming descent either from Saul or from the ten tribes, for on this point they do not seem to be quite clear But this is of the less consequence that both claims are alike madmissible. Notwithstanding a certain Jewish expression, which they have in common with the Armenians and other races of the Iranian plateau, they are beyond all doubt an Aryan and not a Semitic race, so far as these terms can be at all used as racial rather than linguistic designations. And here it may be well to remember that both Aryan and Semite belong equally to one ethnical stock, conventionally known to anthropologists as the Caucasian or Mediterranean, and that they can often be distinguished one from the other only by the test of language. We have the same phenomenon in Europe, where but for their speech, no one would even suspect that the Basques of the western Pyrences were other than a somewhat favourable specimen of the Aryan race. This test, however, is abundantly sufficient to sever them from that connection, and the same test must suffice to remove the Ighans from the Semitic to the Aryan group

Their most general and apparently oldest national name is Pukhtin or Pakhtin, as it is memorated by the Khubaris, and which has been identified with the rearries, of whom Herodotus heard through Seylav (509 B c.) as situated about the junction of the Köphes (Kibul) and Indus Their country they still call Pukhtin khwa, which is equivalent to Watan khaq, or "Home Land", their language is always called by them the Pukhtis, softened in the west to Pushtia, and from Pakhtina, the plural of Pakhtin, comes the form Pathân, by which they are lower throughout India. This word has been connected with the root Pukhtia, a hill, so that Pukhtin would mean Highlinder. But such derivations are seldom trustworthy, and it may be questioned whether any people have eves called themselves Hill men, thou, h often enough so named by their neighbours.

The alternative national name, Afghan, by which they are exclusively known in Persia and Europe, has been regarded by some as synonymous with Pukhian, both meaning "set free," but by others it has been connected with Açvakan, the Açvaka, or "Horsemen," of the Mahabharata, who are supposed to be the Assakani, or Assekenes, of the later Greek historians The natures themselves draw a distinction between the two names, so that although all Afghans are Pukhtana, not all Pukhtana are true Afghans The atter term is properly restricted to the descendants of a legendary kais, one of the first apostles of Islam (ob 662), from whom, through his three sons. Saraban, Batan, and Gurgusht, are supposed to spring the 277 Afghan khels (tribes) proper Of non Afghan khels there are recloned 128, making 405 Pukhtana khels altogether Of these 105 are Sarabani (from Saraban), 77 from Batan, in two divisions, Batanai 25 and Matti 25, these last being known as Ghilzae, 223 from Gurgusht, also in two divisions, Gurgushtai 95 and Karalanai 128, these last being the non Afghan or Pukhtana khels as above The true Afghans occupy mainly the western, central, and north eastern districts-Herat, Sistân, Kandahar, and the Kâbul basin, as far east as Peshawar The non Afghans, or Pathans proper, are found almost exclusively in the Sufed Koh and Suliman highlands, as fur south as the Kaura or Vahova Pass, opposite Dera Tateh Khan. A line drawn from about the paralled of Mooltan, through this point, westwards to Thal through the middle of the Derajat, will very nearly form the boundary in this direction of the Pathans on the north, and the Balochis and Brahuis on the south. This relative geographical area suggests a possi ble explanation of the distinction between the two great divisions of the race. From their more westerly position it is obvious that the true Afghans must have been the first to adopt Islam, and they may have thus come to look upon their pagan brethren of the Sulman high lands as kafirs, undeserving to rank as genuine Afghans, the distinction thus originated naturally surviving their subsequent conversion

In the subjoined table an attempt is made to give, for probably the first time, a complete classificit on of all the main sections of both divisions, with their chief sub branches, approximate number of kbels, geographical area, and population

Table of Afghan and Pathan Tribes

	1 790	3 521 000		
064		1	who e table Nor I to	to inclusive are recognised as true

Of the main sections in the above table, Nos I to 12 inclusive, are recognised as true Afghins, and of these, Nos I and 3 (Dur'ins and Ghiliaes) are by far the most important and influential Since the time of Nadir Shah, the Duranis have been the ruling tribe, the Popalare division till 1818, the Barakace from that year to the present time. They were formerly called

BALUCHISTAN, or the country of His Highness the Khun of Kelat This country lies only Afghamstan, extending on the south to the Arabiran Sea, on the east to the frontier of Sind, and on the west to the frontier of Persa II extends from latitude 2x*5 30 00° N, and from long tude 6x*0 to 69° 45 E, its greatest length on the north from east to west being about 5,0 miles, and greatest breadth north to south about 380 miles Its area is about 160 000 squire miles Its coast line is remarkably regular but craggy and not much elevated, to wards the interior, however, there is rapid elevation. On the coast there are several well shell greef roadsteads, particularly Somman by and Chaubur bay, but no good harbours.

Much of this country is unexplored, in describing it therefore only an approximation to accuracy can be attained It comprises seven divisions or provinces 212, Cutch Gandava and country of the Maris and Bugtis on the north east, Saray an on the north, Ihalay ar on the east Lus, on the south east, Makran occupying an extensive length of country on the south. Actistan or the mountain country on the west, and Aelal, in which is situated the cannot of the same name. The interior of the country is rugged, and barren. Its eastern side is crossed from north to south by the Hala and Khirtari ranges of hills, which are a contimustion of the Suliman range, but there are no very lofty eminences. The whole country is described as a maze of mountains, except on the north west where it becomes part of the desert. The direction of these mountain chains are almost wholly unknown with even tion of a few of the principal ranges. One vast chain stretches along the entire coast, from the vicinity of Ras Ivuni on the west, to the river Purals on the east Parallel to this range. and at the distance of about 70 miles north from it, another well defined chain intersects Makran and joins with the Sarawani mountains near Bela. A third parallel range, called the Washing or Mue mountains, about 110 miles further north from the last described chain, forms part of the northern boundary of Baluchistan, separating it from the great southern desert of Afr hanistan. The other remarkable chains are the Bushkurd mountains, about 240 miles in length, and the Sarawani mountains stretching in a north east direction

The rivers of Baluchistin are the Bholau, Rodbat, Lora, Shrunab and Mula in the north, the Hubb Sinamani, Marwir, Nari, Urnach and Purali in the east the Shadi, Mokuli Bha sul, Chish, and Gasbastin in the south, and the Dasht, Rakshan, Bhado, Gwargo, Nehing and Mishkhid in the west, with the exception of the Hubb they all dry up, or are lost in the earth during the dry weather, in the west season however, they are destructive mounting torients. Few of them flow through regular and well defined channels. Along the whole 500 miles of coast which Bulichistan possesses, there is no stream which cannot in dry weather be forded

the Abdali or Aidali, a name which has been traced to the Ephthalites and Abdeli of the Byzantine writers of the sixth century. But it was changed to Duráni from the title of Dura Durán, "Pearl of the Agg, assumed by the Sardar Ahmad Khan, of the Saddozae branch of the Popultaes when he usurped the supreme power at Kandaliar on the deuth of Nidir Shah, in 1747. The sext of government was removed from Kandahar to Kibul by his successor Taumha Shah (ob 1793), and this dynasty became extinct in 1818, when it was succeeded by the Barikanes in Kibul, though vinous descendants of Ahmad Khan continued and still continue to assert their claums to the so cereivity in Herat.

Although mentioned in the national genealogies, the right of the Ghiliaes to be considered as Pukhtins at all, much less genuine Afghrins has been questioned. There certainly seems be a flaw in their escutcheoi, and they themselves (who always call themselves Ghija, and not Ghilaes). Calam Türki descent. The national tradition is that they entered the country in the tenth century under a certain Sabaktagin, of the Aliheh Türk in the "anciently situated on the upper course of the Javaries" (Syr Daya). But however this be, they are now entirely assimilated in habits, dress, religion and speech, to the other Afghan tribes, with the exception of a few who are still normals.

None of the other sections call for special remark except the Powindias, who are at once agriculturists, traders, and warnors, their armed caravans yearly fighting their way through the interiening hossile tribes down to the markets of the Panjab and Smidh. The name is supposed to be derived from the Persian Paravanda, a bale of goods and seems to be indifferently applied to the Lobrains, Waaris, Kalaris Ghilazes or any other timb temporarity or permanently forming part of this singular trades union. By far the most important section are the Lobrains the oldest and most numerous members of the association, and one of the most promising elements for the future picific settlement and material prospects of the country.

Physically the Af, hans may be described as, on the whole, a fine race. Their features though often coarse and ugh, are regular in the Europerus anseise of the term, with the oct sonal Jessis cistabote remirked upon. Type, long, oval face, arched nose, head mesti cephalous, that is, intermediate between the round and the long, measured horizontally with cranal index 79 * fair complexion, thick beard, hair and eye generally black, but light blue or grey eyes and brown hair common amongst the Robillas, as the Suliman light inders are often collectively called

divanity in human shape, but really by the Deb Raji, who is elected by the Penlows every three years from their own number. Buddham is the religion of the country and the inhabitants are hardy, and rigorous, with dark slams, and high check hones.

Bhutan trades with all the neighbouring countries but chiefly with Thibet, Bengal and Assum, in horses, cloth, mush, fly whishs, valunts, oranges and Indian madder, receiving in exchange woollen clyths cottons, assfected, spices, tea, gold, silver and embroidenes. The revenues of the country are usually paid in articles of produce and merchandise.

The chief towns are Punakhr or Dosen the capital, on the left bank of the Bugui river, and minety six miles east north-east from Darjeeling, Tasichorong and Paro on the river Guda da, and Toungsu on the road from Assam to Lhassa. The other towns are Wandipur, Ghassa and Murchom Punakha is a place of great natural strength

The Towang Bhutias occupy the southern slopes of the Himalayas to the eastward of Phutin proper, of which state they are independent. A considerable trade between Lhassa and Assam is earned on through them. The Towangs are quet and friendly. Eastward of the Towangs are the Char Duar and Thebengea Bhutias, two small and well behaved clans. The territory of the Towang Bhutias extends to the river Rowta, that of the Char Duar Bhutias from the Rowta to the Ghaber river.

A few Bhutias inhabit the Eastern Duars portion of the Goalpara district of Assam, and resemble in every respect their countrymen in the Bhutan hills

The language spoken by the Bhutas is said to be a direlect of the Thibetan more or less blinded with words and idoms of the countries on which their own territory fueches. In their religious observances the most remarkable circumstance is the noise with which they are accompanied. The instruments used are clarinoids sometimes forned of silver and brass, but generally of wood with reed pipes, home, shells, cymbals drums and gongs.

The garments of the people consist of 2 long loose robe which wraps round the body, and is secured in its position by a leather belt round the waist. A legging of broadcloth is attached to a shoe made generally of buffaloe hade. No Bhutta ever travels during the winter without protecting his legs and feet against the effects of the snow, by putting on these boots, which are secured by a garter tied under the knee. A cap made of fur or coarse woolen cloth completes the habiliment, and the only variation observable is the substitution of a cloth for a woolen robe during the summer months of the year. The diet of the great body of the people is the most miserable it is possible to conceive, they are restricted to the refuse of wetched crops of unripe wheat and barley, and their food consists chiefly of cakes made from these grains very imperfectly ground. The food of the superior classes consists of the flesh of roats, swine and cattle, and of rice imported from the Duris. The mode of preparing their food is most inartificial and rude, with little attention to cleanlines and still less to the quality of the meat they consume. They are very fond of tea and use it in large quantities classes are very much addicted to the use of intoxicating liquors. Their amusements are almost entirely confined to archery and quoits, and their character seldom appears to greater advantage than when engaged in these exercises The character of the Bhutias, by the nature of their institutions, stands low in the social scale. Every element of deterioration is comprised in their government, both secular and spiritua. Their energies are paralysed by the insecurity of property, their morals are degraded, and their numbers reduced by the unnatural system of polyandry and the excessive prevalence of monastic institutions

A.ASMUIR or CASHMERE—A name now given to an extensive tract of country, retching from the Punjab on the south and west, to Thiese on the north and east, it setteme length being about 400 miles and its breadth *50 miles. The boundary of this territory on the north und north-cus is undefined, or maknown. The country modules the valley of haadmur proper, 5 300 to 6,000 feet above, the Lammoo Bhadrawar, Gilghit, Kawara, Asobhera, Punch, Rukshu and others, and is almost entirely mountainous. In the southern portion the mountain sides are clothed with forests of cedar and pine, but further northwards towards Thibet, there are large tricts destintle even of a trace of vegetation. The scenery of the mountains is in

fertile, but patient industry has rendered the plants and salleys productive in all cat barley the millets and pulses of various kinds, oil seeds, cotton, rice, indigo and tobacco. The sigar cane grows chiefly on the plants of Lus and the date in Makran. Vegetables of every kind are abundant, and the gardens and orchards in the vicinity of the towns produce the finest fruits, on the coast fish are caught in great quantities.

The manufactures of Baluchistan are unimportant, being confined to a few matchlocks and other fire arms at Kelat.

The inhibitants are divided into two great branches the Baluchis and the Bribuis, differing in language, figure and manners. The Baluchis are tall, well formed and of dark completion the Bribuis so called from the words bañ ruh 1 (on the waste) are much shorter and broader with hur and beards frequently brown. They are most numerous in the province of plashwar and in the north and west. They have greet physical strength, and are generally more peaceful than the Baluchis. Both races are pastoral hosp table brave, excellent marksmen and capable of enduring much fatigue, and belong to the Sunni sect of Mahomedium. Neither possesses a written language and their early histories have not been preserved. Polygamy is universal, few however have more than two waves, some of the chiefs have four. Wives are obtained by purchase, and paid for in sheep &c. and a man is expected to marry the widow of a deceased brother. On the occurrence of a death the body is watched for three nights by friends and relatives, and the time is passed in feast in great and a man before the contraction of the con

The government is despote, the Khan having unlimited power over life, person and property, his rule being confined for the most part to the province immediately around his capitals, the greater part of the country being held by tribal chiefs, over whom he has little or no control though they farnish contingents of men in case of war, and pay tribute, an obligation which is often evided. The revenues are estimated at upwards of Rs 3 oo oos.

The chief towns of Baluchistan are Kelat, the capital, about 6 000 feet above the sea, Bela our las near the coast, Dadar, Gandara Mustang, Nushih, Sarawan, Kej Pasni, Dera, Son meani and Quetta, the inferior towns are Changel, Du, Tump, Sam and Aharat

The languages spoken are Baluchi and I ersian

BHUTAN -Very little is known of this territory which lies to the east of Sikkim, between the Jalpaiguri and Goalpara districts of Bengal and Assam, and the mountains that form the soutlern slope of the Himalayas It extends from east to west 230 miles with a breadth of about 170 miles, lying between latitudes 26° 18 and 28° 2 N and longitudes 88° 32 and about 92° 30 E The eastern limits are not certainly known the area is about 10 000 square miles. It is crossed by two ranges of mountain land parallel to the great mountain chain beyond, one (the nearest), 8 000 feet high generally, with occasional peaks as much as 16,000 feet, the other, more distant and less lofty Between the Himalayas and the first range is a high table land too bleak and barren to be habitable except at the foot of the first range where are most of the principal towns. To the east of the second range the land is level, and south wards of the lower range are the Duars, tracts of country of extraordinary fertility, whose produce once formed the chief means of subsistence of the people. These Duars were ceded to the British in 1866 in return for an annual payment of money On the north Bhutan is bounded by Tibet and on the east by tracts inhabited by uncivilized mountain tribes. The scenery of Bhutan is scarcely to be equalled by that of any other country, at one view may be seen rugged barren hills and valleys covered with luxuriant vegetation rushing mountain torrents and gentle streams dense forests and sunny slopes placed lakes and steep precipices and vast ranges covered with eternal snow, while in regard to climate, the cold of Siberra, the heat of Africa, and the pleasant warmth of Italy, may all be experienced in a day's journey

The soil produces rice, when and millet in abundance, and game of all kinds abounds in the forests—sheep, pones and a hardy breed of horned cattle are retried. The roads are mer tracks through ravines which become torrents in the rainy section. The population, estimated at about -0,000, consists of three classes, the priests, the chiefs or Penlows, who are the governing class and the cultivators.

The country is governed nominally by a person called the Dharm Rain supposed to be a

divinity in human shape, but really by the Deb Rija, who is elected by the Penlows every three years from their own number. Buddhism is the religion of the country and the inhabitants are bardy and vigorous, with dark skins, and high check bones.

Bhuin trades with all the neighbouring countries but chiefly with Thibet, Bengal and Assam, in horses, cloth, mush, if, which, walnuts, oranges and Indian midder, receiving in exchange woollen cloths, cottons, asaftetida, spices, tea, gold, silver and embroideries. The revenues of the country are usually paid in articles of produce and merchandise

The chief towns are Punakht or Dosen the capital, on the left bank of the Bugni river, and minety six miles east north east from Datjeeling. Tasichozong and Paro on the river Guda da, and Toungsu on the road from Assam to Lbassa. The other towns are Wandipur, Ghassa and Murchom Punakha is a place of great natural strength

The Towang Bhutias occupy the southern slopes of the Himalijas to the eastward of Bhutin proper, of which state they are independent. A considerable trude between Liness and Assam is carried on through them. The Towangs are quet and friendly. Eastward of the Towangs are the Char Duar and Thebenger Bhutias, two small and well behaved class. The territory of the Towang Bhutias extends to the inver Rowta that of the Char Duar Bhutias from the Rowta to the Chaben river.

A few Bhutras inhabit the Eastern Duars portion of the Goalpara district of Assam, and re semble in every respect their countrymen in the Bhutan hills

The language spoken by the librurus is said to be a direct of the Thibetun more or less blended with words and idioms of the countries on which their own territory touches. In their religious observances, the most remark-ble circumstance is the noise with which they are accompanied. The instruments used are clarionist sometimes formed of silver and brass, but generally of wood with reed pipes, horns, shells, cymbils drams and gongs.

The garments of the people consist of a long loose robe which wraps round the body, and is secured in its position by a leather belt round the waist. A legging of broadcloth is attached to a shoe made generally of buffaloe hide. No Bhutia ever travels during the winter without protecting his legs and feet against the effects of the sno v by putting on these boots. which are secured by a garter tied under the knee. A cap made of fur or coarse woolen rioth completes the habilment, and the only variation observable is the substitution of a cloth for a woolen robe during the summer months of the year. The diet of the great body of the people is the most miserable it is possible to conceive, they are restricted to the refuse of weetched crops of unine wheat and barley, and their food consists chiefly of cakes made from these grains very imperfectly ground. The food of the superior classes consists of the flesh of goats, swine and cattle, and of rice imported from the Duars. The mode of preparing their food is most martificial and rude, with little attention to cleanlines and still less to the quality of the meat they consume. They are very fond of ten and use it in large quantities. All classes are very much addicted to the use of intoxicating liquors. Their amusements are almost entirely confined to archery and quoits, and their character seldom appears to greater advantage than when engaged in these exercises. The character of the Bhutias, by the nature of their institutions, stands low in the social scale. Every element of deterioration is comprised in their government both secular and spiritua. Their energies are paralysed by the insecurity of property, their morals are degraded and their numbers reduced by the unnatural system of polyandry and the excessive prevalence of monastic institutions

A ASH HIR or CASH HERE—A name now given to an extensive tract of country, reching from the Pumph on the south and west, to Thiete on the north and east, its extreme length being about 400 miles and its breadth 250 miles. The boundary of this territory on the north and north-evist is undefined, or unknown. The country, includes the valley of Asakmat propers, 350 to 6 000 feet above the sea, Ladvik or Leh, Baltistin or I tile Thibet, and several provinces of smaller importance, 112 Jimmoo Bhadrawar, Gilghir, Isrisar, Nosherr Punch, Rukshin and others, and is almost entirely mountainous. In the soul ern portion, the moveman sides are clothed with forests of cedar and pine but further northwards towards. Thibet, there are large tracts destitute even of a trace of vegetation. The scenery of the mountains is in

180

the highest, degree picturesque The grandeur and splendour of Kashmir scenery results from the sublimity of the huge enclosing mountains, the beauty of the various gorges, the numerous lakes and fine streams, rendered often more striking by cataracts, the luxuriance and variety of the forest trees and the rich and varied vegetation of the lower ground

The valley of kashmir is an expansion of part of the valley of the Jhelum, here called the Behat It is an oval plun, 4 500 square miles in area, surrounded on all sides by lofty mountains, whose passes on the north side are not less than 10,000 feet above the sea. The actual plain or bottom of the valley is about seventy miles long and thirty to forty miles wide and is 5,300 feet above the sea The river Jhelum flows through it in a winding and tranquil, navigable stream, at one time washing the base of the hills on one side and then crossing to the other On the rising of the river in summer, when the snow melts on the mountains, the whole plain would be mundated, but for a system of dykes called bunds placed along the course of the stream The river expands into lakes, one of which, the Wulur is about twenty miles long by nine broad, and another near the city of Srinagar the capital, as long, but of only half the breadth The soil of the villey is most fertile and produces corn of all kinds, fruits, nuts and flowers

The inhabitants of the valley are chiefly Mahomedans of the Sunni class, but in the sur rounding country they exhibit a mixture of the Hindu and the Tartar, the Tartar characteris tics being more marked as we approach the mountains, the dress, customs and even the religion changing gradually with the changes of the physical features of the country The language of the country is Cashnuri, derived from the Sanskrit and the Persian

The climate of the country though subject to extremes of temperature, is on the whole salubrious, and is divided into the four seasons as elsewhere, but the periodical rains of India do not reach so far into the mountains March and April are somewhat rainy, May and June are dry and fine, July and August are the hottest part of the year and are marked by thunder storms The winter lasts four months, and the ground is then covered with snow Earth quakes are frequent

The most celebrated manufacture of Kashmir is that of shawls, the wool used in their manufacture being of two kinds, one obtained from the tame, the other from the wild gott, wild sheep and other wild animals, the fine down growing next to the skin alone is taken. The demand for these shawls has from various causes greatly fallen off of late years, and is still on the wane. Otto of roses is also made in large quantity, and of the finest quality. Fire-arms, saddlery, leather, papier mache, lacquered ware and paper are largely manufactured, and the artizans employ extraordinary pains in their manufacture, producing with their rude tools, work of extaordinary beauty and excellence

The chief towns are Kashmir or Srinagar and Jummoo, the two capitals, Skardo on the upper Indus, Islamabad, Kishtwar, Leh, Astor, Naoshera, Shahabad, Punch, Shapiyon and Gilghit

Golab Sing, the father of the present prince, was put in possession of the whole country by the British in 1846, to whom it had been ceded in 1845 by the Sikhs, who held possession of it since 1819, when they took it from the Afghans who had conquered it in 1752

Numerous passes lead into the Kashmir territory and valley, many of which are practi cable for horses, but none for wheeled carriages, the principal among which may be mentioned, the Nabog pass on the eastern frontier, the Banihal pass 9 700 feet high, on the southern frontier, the Baramulla pass, westwards, or Punch pass 8,500 feet high, on the western frontier, Baramulla pass, southwards, and the Pir Panjal pass, 11,500 feet high, through which the road from Bhimbar goes (See Punjab Province native states)

MANIPUR is a rugged mountainous country south east of Assam, between Assam and the Burman empire It is intersected by two great valleys, one on the west and the other through the centre of the territory In the central valley, rice, pulse, sugar cane and tobacco grow luxuriantly and the tea plant flourishes throughout The soil is very fruitful, but there is little cultivation. There are several brine springs in the territory. Iron ore is found and there are manufactures of iron and copper, the latter being chiefly worked as bell metal for drinking and other vessels as well as coins The territory is 125 miles in length from north to south, and about 100 miles in breadth There are no public works, except a road from Cachar to

the capital, Imphal. The Manipuris, though Hindus of the Ashattriva or warrior caste are not of Ary an descent, their origin is locally ascribed to the union of two nowerful tribes one Naga and the other Kuki, which had for a long time contended for the possession of the Manipur valleys They are tall, well made and of a fair complexion. In character they are cunning, and treacherous in dealing with those who are not of their own race, but on the other hand they seem to behave with great honesty to one another, and their fidelity to their leaders is remarkable, they first became Hindus about a century ago. The country is regarded as neutral territory between British India and Burmah, and its boundaries on the east or Burmah side, are quite unsettled (See Assam Province native states)

AEPAL -This independent sixte extends from Latitude 26° 25 to 30° 17' N and from Longuade 80' 15 to 88' 15 E, and is by ded on the north by Thiest on the east by yikkin and the British district of Dripeling on the but by the British districts of Briti, Gorkhyur, Chumparun, Moxiffepore, Durbhung hanging hing ilym and Purneals on the south west by Oudh, and on the west by the British district of Kumaun. Its length from east to west is about 550 miles, and its breadth about 160 miles, having an area of about \$4,00 source miles The principal territorial divisions are Murang, Chayppur Makmani, Khatang, Nepal proper, Gutkha, khuchi, and Malibum. The territory exhibits great diversity of surface and climate, and corresponding differences of vegetable and animal life at is traversed by several considerable streams, and is divided into five parallel zones. The principal rivers which traverse Nepal, are the Karnali, Gundak Trisul Gunga Bori Gundak, Kosi, Gogra and Lagman, most of them rising in the highlands of Thibet. Along its southern border extends the Taray, a long parrow strip of marshy forest and jungle about twenty miles broad. beyond this is a forest region producing a great variety of valuable timber this again the country becomes more hilly and continues to use in terraces. Still further north, these begin to assume a mountainous character, beyond and above which rises the great Snow, Range, where are found Mount Everest (29.007 feet), Dhawalagiri (26.867 feet). Gosamthan, Kanchinjunga (*8,156 feet), and others, the highest peaks in the world. Among the mountains are several inhabited valleys, varying in height from 3 000 to 6 000 feet above the plans of Bengal Of these the valley of Nepal proper is perhaps the largest, being twelve miles long, and nine miles broad. It is bounded on all sides by lofty mountains, and its undulating surface is covered with a rich expanse of cultivated land, watered by numer ous winding streams, and studded with villages and towns. The valley has the appear ance of a take bed, and Hindu records describe it as having been so at some former

The chinate of Nepal, notwithstanding its low latitude, from its great and varying eleva tions above the level of the sea, is characterised by the widest extremes in different parts, and all degrees of temperature, from the cold of Siberra to the burning heat of the African desert, may be experienced in a day or twos' journey Generally, however the climate resembles in some respects that of southern Europe The seasons are those of Upper India, but the rains commence earlier and set in from the south east. In the Tarai, putrid fever is common, and fatal from the middle of March to the middle of November

The numeral productions of this country are varied and important Conner and iron mines are worked in the hills and lead, arsenic and building stone abound. Mines of sulphur are said to be numerous, but little is known about them. The manufactures include utensils of copper, brass and iron, the easting of bells and the fabrication of cutlery, ordnance, guns and snords, also coarse cotton cloth and paper. Iron, copper, wors, timber, hides, rice, ginger, wax, honey, card moms and fruits are exported

The revenue is said to be about 43 00 000 Rupees, and the population, about 3,000 000, con sists of Gurkhas, Newars, Bhutius and aboriginal mountain tribes. The Gurkhas are the ruling race and are Hinduized Tarrars, the Newars, chiefly confined to Nepal proper, are agricultur ists, traders and artizans, they have Chinese features and are also of Tartar origin, the Bhutras Thin but the higher ranges adjoining Thibet All classes drink spirituous liquors to excess, and most of the domestic servants are slaves. The language spoken by the Gurkhas is a mountain dialect of Hindi called Prib diya, the dialect of the Newars is peculiar to themselves,

dialect of Hindi called 1710 1117a, the dialect of the recently performed to the Hindustani, however, is generally understood.

The chief towns are Katmandu, the capital 4,784ft in elevation and head-quarters of the

Resident, having a population of about 50,000 souls, Lalita Patan, Dhatgaon, Gurkha, Jamla and Makwanpur This country is almost entirely unexplored, owing to the writchful vigilance and pealousy manifested by the ruling race in this respect. The British Government practically has no influence over Nepal, and except the Resident at Katmandu, no Englishman can enter, much more explore the country, and no survey can be executed, nor is the exact nature of the relations between Nepal and China correctly known, though it is said, a mission with presents proceeds to China every five years

SIKKIM—A small mountunous tract, between hepal and Bhuttn, which list it resembles it is physical features and its productions are similar. On its northern frontier are some of the highest peaks of the Himilayan chain. It is about sixty six miles in length from non to south, and about fifty two in breadth. The population consists of Murmis, Lepchis, Bhuttas and Limbus. The Rajah resides at the cipital, Tamlung, from November to May, when he moves to Chumbi, on the Thibetan side of the range. Sikkim is allowed, Limbus to \mathcal{L} 200 a year by the Government at Limss1, and the allowance from the Brutish Government has been increased to \mathcal{L} 1,200 a year, on the condition that every facility should be given to trade with Thibet (See Bengal native states).

HILL TIPPERAH—A mountainous treet bounded on the north by the British distincts of Sylhet and Cachar, on the east by Burmih, on the south by the British distincts of Chita gong and Chitagong Hill Tracts, and on the west by British Tipperah. It is about 193 miles in length from north to south, and shout fifty imiles in breadth, and covered with deare bamboo jungle infested with wild animals. The inhibitants are crited kakis and culturative, cotton Indian corn indigo yims beans and other vegetables. The soil is exceedingly fertile and the tea plant grows wild. The government is in the hands of a number of cluric who levy tribute on their dependents at will, themselves paying an annual tribute to the Maharajah of the State. (See Bengil native states.)

OCEAN ISLANDS

Near the Malabar, Coromandel and Bur mah Coasts

ANDAMAN ISLANDS AND COCOS -A chain of four large and several smalle is lands, of volcanic origin, about 200 miles west of the coast of the Tenaserim province of British Burmah, extend ng north and south parallel to the coast, between the 10th and the 15th degrees of north Latitude, and the 9 and and 94th degrees of east Longitude, of a total length of about 200 miles, and an area of about 2,700 square miles In this extent, north and south, are in cluded the island of Preparis, uninhabited, and the islands of the Cow and Calf, which by some are excluded from this group, also the Cocos and Narcondam They consist of a mountain ridge, rising at Saddle Peak to 2,400 feet, the escarped side be ng towards the east and sloping to the west The main portion is about 140 miles in length, but divided into three parts by very narrow straits Dangerous coral reefs surround the group, and dense tropical forest, coming down to the water's edge covers the greater part of their surface. They are peopled by dwarfed and woolly headed savages of the Papuan race, who have no fixed habita tion no pursuit, and no government, smearing themselves with mud and ochre as a protection from insects, and manifesting the most hostile disposition on every attempt to establish inter course with them There are several excellent harbours, the best of them being Port Blart, where a penal colony for all India was established in 1868, when the whole group was formally annexed and placed under an officer now styled the 'Chief Commissioner and Superintendent of the Andaman and Nicobar islands,' in direct correspondence with the Government of Ind 1. These islands are singularly interesting for their zoology several species of large land animals. being apparently confined to them. They have recently yielded a new large sized chimpanzee

and a new species of hog. The population of the entire group, excluding the convict settle ment, is about 3000, and is first dying out.

The four largest slands of the group are named respectively, North, Middle, South and Lattle Andaman, Middle Andaman, the largest, being about 50 miles long and 25 broad. South Andaman, 50 miles long and 25 broad. The last, about thirty miles in length, is separated from the man group of three by a strut cylled "Duncan Prissige." Port Blair, 800 miles from the man group of three by a strut cylled "Duncan Prissige." Port Blair, 800 miles from Calcutta, is in the South Andaman, and is reached by a steamer from thence in four days Mount Harriet, at the foot of which Larl Mayo was assassinated, is in the North Andaman. This mounting in common here, and it is not safe to sleep on the lower slopes of the mount, which has a good burgalow at the summit, with a good road to it. The North Andaman is deeply indented by bays, clothed with the most lovely scenery. The chief government buildings and barracks are on Ross istand, and there are extensive saw mills at Chatham island. The worst class of convicts are kept at Viper's island, where there is an Andaman wilding. The cultivation has been commenced at a point called Aberdeen in the central island. The Latitude of Port Blair (Chatham Island) is it! 'a' 13' N. Longitude 92' 42' 4' 15.

Adjoining the Andman Islands, between them and the Mergiu Archipelago, is Barren Island, a remarkable, active volcano. The whole of this island is a volcanic cone about two miles in diameter as it rises out of the sea, and 1,700 feet high, its last recorded eruption tool, place in 1792. On the north, are the two small uninhabited islands called The Cacon, distant from Port Blair 175 miles, the larger of which is six miles long and two miles broad, the smaller, two and a half miles long and a mile broad. The Coco channel separates them from the Andamans

NICOBAR ISLANDS -A group of islands situated between the parallels of 6° 40 and 9° 20', and mendians of 93° and 94°, about 150 miles south of the Andamans and about the same distance from Sumatra. They form two groups, the south group composed of the islands Great and Little Nicobar or Sumbelong,-the former about thirty miles long by twelve broad, and the latter fourteen miles long, by ten broad, separated by St. George's channel, about six miles broad-and several smaller islets. The north group, separated from the south by the Sombrero channel, is composed of the islands Katchall, Nancown, Camorta (the largest), Trinkut, Terressa, Bompocka, Tillanchong, Chowry, Batti Malve, and the distant Car Nicobar They possess two good harbours, and the southern group is covered to the highest summits with dense forest, while the northern is only wooded on the lower slopes of she hills, towards the sea board, the tops being covered with grass. They are inhabited by piratical Malays, who carry on a considerable traffic in cocoanuts, betel nuts, pigs, poultry and Compared with the Andamanese, these people are perfectly civilised, they wear cloth ing, speak a little English and construct their boats and huts with great ingenuity The popula tion is small, about 8,000 The Danes formed a settlement there in 1756, but abandoned all claim to the sovereignty over the islands in 1848. Formal possession was taken of the whole group in the year 1869 by the British, Government, for a convict settlement The climate is unhealthy Nancowry is distant 225 miles from Port Blair and 390 miles from Rangoon

ACCADIVE ISLANDS—A cluster of coral salands Jung about 100 miles off the halful coast of Indra, between the profiles of 10° and 13° N and the meridians of 72° and 74° E, and containing a population of about seven or eight thousand souls. They form twenty Atols or groups, besides numerous small islands or reefs. The largest, named Undarreed, is the most productive, the rest being comparatively burner, yielding it tile else than ecocomits. The natives are a mild and inoffensive rice, living poorly and dwelling in low thatched, stone built houses. The greater portion of these islands were under the uncontrolled management of a Princess of Cananance, subject to the payment of an annual tribute to the British Govern ment of \$1,000. This tribute inving fallen into arrear, the whole of the five group of Islands in her possession were attached, and are now under British administration. They are included in the district of south Kanara, under the Madras jurisdiction. The island of Manara, linder the Madras jurisdiction.

situated at the foot of, and surrounding the central mountain region. The runfill is consider able, the greatest quantity of run filling about the setting in of the south west monsoon, but heavy downpours occur at intervals throughout the year, even the dry season being interrupted by refreshing showers. March and April are the hottest months of the year

The chief production of the mineral langdom is plumbago which is langely exported. Ones of iron and minguese are pretty generally diffused, and native, alum and silt are also ob uned. The island yields also numerous germ, as methysis rubies, supplies cats eyes, grinets, &c. The pearl fisher; in the Gulf of Manuar, on the north west coast of Ceylon, was formerly the most productive in the world, but for many years parts, no pearls have been obtained to speak of The manufacture of salt which is a Comment monopoly, is confined to particular locatives. Hambautota on the south coast, and Publam to the north of Colombo, are the chief salt producing places. Much salt is also made in the atenity of Juffar. The agretation is near hand varied. All the plants and fruits of the man hand fourths freely, with others which are not

so well known in India

The chief vegetable productions besides priddy (rice), grown chiefly in the lowlands, are the coconaut, coffee and cinnamon, which form the main source of weight to the island. The coconaut prilm is found mostly in the maritime districts of the west and south. The cinnamon plant is cultivated extensively on the western costs, theirly in the neighborhood of Colombo. The plantations of coffee are situated mostly upon the mountain slopes, and in the lofty valleys of the interior. A considerable amount of European energy, skill and capital have of they exist been brought to bear upon the production in Coplon of this useful article of commerce. About 1,000,000 cut of coffee, the produce of the Ceylon plantations, are exported yearly to the European and other markets.

The forests contain valuable timber trees, as satin wood, jack wood calamander, ebony and others. Cotton and sugar cane can be groun, but are not cultivated to any extent. Tobacco is cultivated in the northern parts, where also the black pulmyra abounds, and is largely exported. Potatoes and other European regetables are grown in the kandyan country.

The povernment of Ceylon is entirely separate from that of India. Ceylon is a crown council of five members, and a legislature council of five members, and a legislature council of five members, and a legislature council of five members, and a legislature.

For administrative purposes the island is divided into six provinces, i.i., the western, central, southern, enstern, north western and northern each under the control of a Government Agent. The provinces are ragian subdivided into districts, over each of which an Assistant Government Agent is appointed. There is a supreme, civil and criminal court, and district courts of the chief-stations of the several provinces, viz., Colombo, Kundy, Galle, Batticaloa, Kurungalli and Jaffian of Jaffinapatium.

The means of internal communication are good, the island being traversed in most parts by excellent roads. A railway connects Colombo with the mountain capital Kandy, and has been extended into the coffee producing districts of the Central Province.

The population of the island recording to a consist taken in 1871 was 2,105-57. The inhibitinits consist principally of native Cinghalese in the western, north western, central and southern provinces, and Tamils in the northern and exister. Besides these, there are in all the large towns, numbers of people of in well (Luropean and native) origin who are designated Burghers of Eurisians. In addition also to the Truilis, who are permanently resident in the country, there is a large floating population of immigratist from the cost of India who are engaged in the coffee cultivation and other radistrial pursuits in Ceylon. Mahomedians of Arab descent are found scattered throughout the island, engaged chieft, as traders. The Weddas, an aborginal and savage race, inhabit the remote jungles of the interior and subsist munhy upon the products of the chase.

The chief towns are Colomi'o the capital and seat of Government, situated on the western coast near the mouth of the Kalam Garen population about 100 000. Colombo barbour 10 only capible of receiving small vessels. Gill, or Panil of 2016 is the chief town in the southern province, and the port of call for all the mal steamers proceed ug to Calcutta, China and Au testia.

MALDIVE ISLANDS, or, Male liva (Thousand Isles) A chain of cord islands south of the Laccadives, extending from Latitude of 40 % to 7.6 N, and nerify on the meridian of 23 of P, with a breatth of about fifty male. The group is composed of secentica Atols each of which is fringed with reefs, sometimes extending to the distance of two or three mules, by ond which there are no soundings. In the centre of each Atol, there is a lagoon of from 15 to 49 fithoms in depth. They are right, clothed with wood chiefly palm, and are fettle in fruit and virous edible roots, they also produce millet, and abound in coconius, fouls and all descriptions of fish. The inhibitinits are a timid, inoffensive and cightsed rice, and curry on a considerable tride with Bengal, Ceylon, the Malabri Costs, and S matrix. They are expert any and a surface, and have schools for teaching navigations onsome of the islands, and even make and repair nautical instruments. They are remarkable for the r hospitality, and all hundress to shipwrecked mariners, for which they refuse all pecuniary compensation, and are Mahomedans governed by a Saltra whose title and rank are hereditary. He resides in the island of Male or Mohl, and pays an annual tribute to the British Government in Ceylon. The population consists of about 200,000 50018.

CEVLON—This large and beautiful island, "The jewel of the Eastern Sens," lies to the south of the pennisula of India, between the parallels of \$7.55 and \$7.51 North Lattitude, and the mentidians of 70.41 and 81.75 & East Longitude. It is separated from the min Indi by I ill. s Strut, and the Gulf of Manaar, which at their narrowest part, along what is known as Adums Brid, o, are about sixty two mules in width. The distance between the most northerly point of the pennisula of Jaffina, and I ount Culmere on the coast of the Karnatik, is only about forty nules. Its greatest length from north to south is about 270 miles, and its greatest width, from east to west, about 126 falls. Its area is a bout 24.64 squire miles.

Adam's Bridge, which almost connects Ceylon with the mun land of India, consists of a chain of low coral reef, and sand banks, stretching between the islands of Manari and Paumben.

The central part of the island is mountainous, consisting of a succession of mountainous ridges with intervening valleys, many of them of considerable cleation. The highest park is that of Pedrotulizulli, which overlooks the plan of Nuwaru Eliya and reaches an election of 8 260 feet. The plan itself is up and so of 500 feet above the sea level, and is resorted to as a sanitration by the English risidents of the low country.

Other unportant heights are Kirrgalpota 7,810 feet, Totapella 7,720 feet, and Adams perk, an jointed mountain on the south west of the central mountain zone, formerly supposed to be the highest in Cejon but now ascertined to be only 7,420 feet in height. Between the moin tunious district and the sea, there is a broad belt of low country extending around the coast, but narrower to the southern part of the island than in the northern

Numerous rivers and streams take their rise among the mountums in the interior, and flow in all directions to the sea. The largest of these are the Mahrwila Ganga, which rises in the "neighbourhood of Nuwara Eliya, and flows into the Bry of Bengal near Trincountee the Kilany Ganga, which enters the sea in little to the north of Colombo on the nestern cost, the Kilany Ganga, which enters the sear little to the north of Colombo on the nestern cost, the Kilany Ganga, which only, and several others. Although few of its invers are available to any great extent for invigation, no country in the world is perhaps so well watered as Ceylon There are no natural lakes, properly so citied in the island, but along different pairs of the existent and western coasts, there are extensive lagoons or back waters, similar to those on ite Malabar coast of the Widar's Presidency.

The climate of Ceylon is peculiarly under the influence of the monsoons. The north case of the monsoon prevails from November till March or April and the south western from May till October. Variable winds and considerable atmospheric disturbance mark, the transition from one monsoon to the other. Notwithstanding its lon littude, the temperature is generally much less oppressive than in India. On the western coast it varies but slightly throughout the year tid the atmosphere in this part of the sixtud especially during the prevalence of the such Themonsoon, is exceedingly monst. The eastern and northern parts are hotter and direr. The being, agof the hill country is temperate and healthy. The most unhealthy districts are 0 is exceeded.

situated at the foot of and surrounding the central mountain region. The runfall is consider able, the greatest quantity of run fulling about the setting in of the south nest monsoon, but heavy downpours occur at intervals throughout the year, even the dry season being interrupted by refreshing showers, March and April are the hottest months of the year.

The chief production of the mineral kingdom is plumbingo, which is largely exported. Ores of fron and manganese are pretty generally diffused, and intre, alum and salt are also obtained. The island yields also numerous gens, as membysts rubes, suppliers, cat's eyes, grantes, &c. The pearl fishery in the Gulf of Manari, on the north west coast of Ceylon, was formerly the most productive in the world, but for many years past, no pearls have been obtained to speals of The manufacture of salt, which is a Government monopoly, is confined to particular localities. Hambanioti on the south coast, and Publian to the north of Colombo are the chief salt producing places. Much salt salso made in the vicinity of Juffar. The vegetation is not and varied. All the plants and fruits of the main land flourish freely, with others which are not so well known in India.

The chief vegetable productions besides priddy (nee), grown chiefly in the loulands, are the occanut, coffee and cinnamon, which form the mun source of weulth to the island. The occanut palm is found mostly in the maritime districts of the west and south. The cinnamon plant is cultivated extensively on the western covist, chiefly in the neighborhood of Colombo The planations of coffee are situated mostly upon the mountain slopes and in the lofty salleys of the interior. A considerable amount of European energy, skill and capital have of late years been brought to bear upon the production in Ceylon of this useful article of commerce. About 1,000,000 cxt of coffee, the produce of the Ceylon planations, are exported yearly to the European and other markets.

The forests contribusing timber trees, as satin wood, jack wood, crimminder, ebony and others. Cotton and sugar cane can be grown but are not cultivated to any extent. Tobacco is cultivated in the northern parts, where also the black palmyra abounds, and is largely exported. Potatoes and other European regetables are grown in the kandyan country.

The government of Ceylon is entirely separate from that of India Ceylon is a crown colony, and is administered by a governor appointed by the Queen assisted by an executive council of fice members, and a legislative council of fice including the executive)

If, or administrative purposes the island is divided into six provinces $\tau \iota$, the western, centre, north western and northern each under the control of a Government Agent. The provinces are again subdivided into districts over each of which an Assistant Government Agent is appointed. There is a supreme, civil and criminal court, and district courts of the chief stations of the several provinces, $\sigma u u$, Colombo, Kandy, Galle, Batticalor, Kurungulla and Jaffian of Jaffianpatam

The means of internal communication are good, it e island being traversed in most parts by excellent roads. A rulway connects Colombo with the mountain capital Kandij, and has been extended into the coffee producing districts of the Central Province.

The population of the island according to a census taken in 1871 was 240,287. The inhibitints consist principally of native Conghalese in the eatern, north western, central and southern provinces, and Tamls in the northern and eastern. Besides these, there are in all the large towns, numbers of people of in vediffuropean and native) origin, who are designated Burghers or Purrisins. In addition also to the Tamlis who are permanently resident in the country, there is a large floating population of immigrants from the cost of India, who are engiged in the coffee cultivation and other industrial pursuits in Ceylon. Mahomedans of Arab descent are found scattered throughout the island, engaged chieft, as traders. The Weddas an aborginal and savage race inhabit the remote jungles of the interior and subassist mainly upon the products of the chase.

The chief towns are Colomb's, the capital and seat of Government, situated on the western coast near the mouth of the Kalany Ginga population about too too. Colombo harbour is only capable of receiving small vessels Gill. or Pant di Gill. is the chief town in the southern province, and the port of call by all the mul steamers proceeding to Calcutta, China and Australia.

or homewards Trunomalies on the north east coast, has a fine harbour, but luttle used, except by the ships of the Royal Navy It was formerly the seat of the Government agency of the eastern province Yagna, or Yagnapalam, on a peninsula in the extreme north of Ceylon, is the cipital of the northern province Kandy, the chief town of the central province, 72 miles from Colombo, was the cipital of the island at the time of its conquest by the British. It is situated in a valley at an elevation of about 1,700 feet above the sea level, near it is Perrdenna, with its satin wood bridge over the Mahwaii Canga, and its pretty botancal gardens. Other places of some importance are Kalutara (Caltura), Negombo 1 hitle to the north of Colombo, and Putlam on the western coast Matara and Hambantota on the southern, and Butticaloa the residence of the Government agent of the castern province, on the east coast. In the interior are Nervara Eliya, the sanitarium of the island, situated on a plain 6,200 feet above the sea Kurunegalla, the chief town of the north western province, Gampolla, Malalle and Radulla.

The first settlement Europeans in Ceylon was made by the Portuguese in the early par of the 16th century In the following century the Portuguese were deprived of their posses sins in the island by the Dutch, whose settlements fell into the hands of the English in 1795, when Ceylon was annexed to the Presidency of Madras Shortly afterwards in 1801 it was made into a separate colony.

THE STRAITS SETTLEMENTS AND ADEN.

The Strats Settlements, comprising a total area of about 1,600 square miles and containing a population of about 206 000 souls, consist of the stands of Surgapore and Penang, off the coast of the Malry Peninsula, together with a considerable tract of country in the neighbourhood of Malacet, on the coast between Singapore and Penang, and a tract of smaller area known as the Wellesley Province, on the same coast and adjoining Pening. They were all formerly regrated as dependencies of the Bengal Government, but now form a crown colony, with an administration quite independent of that of India. The chief authority is vested in a Governor appointed by the Queen, as in the case of Ceylon, assisted by an executive council and a legislative council. The several settlements are under the control of Leutenant Governors, who are also members of the contral, executive and legislative control fluence and Governors, who are also members of the contral, executive and legislative assemblies. The following is a brief account of them.

PEMANG, OR PULO PEMANG—(Betel nut Island) called also Prince of Wales Island, is situated between_5° 15° and 5° 30° North Latitude, and in Longitude 100° 15° L, off the western coast of the Malay pennisula, and separated from the pennisula by a strat about two miles in breadth at its narrowest part. The island is 16 miles long, and from 8 to 12 miles broad, and comprises an area of 165 square miles, with a population of some 40 comes souls. The interior of Penang rises into hills of considerable elevation, nearly 2,50° feet above sea level, running from north to south, which divide the island into two nearly equal portions. The plain country on the eastern side of the hills, is the most thickly inhabited part, on this side is suituated fort Cornwalls.

The climate is relaxing and enervating, owing to the excessive humidity of the atmosphere conjoined with great heat Except in unusually dry years, a month does not pass without more or less rain, and the usual yearly rainfull runges from 60 to 90 inches Janutry and February are the direct months. There is no cold season to anygorate the system after the oppressive heat, for this rereson the climate is a trying one to Europeans. The mornings and nights are cool throughout the year, and fogs, so prevalent on the opposite corst, that of Province Wellesley, do not occur except at the base of the hills. The southerly wind is considered unhealthy, but its fortunately rare, while the northern is refreshing and pleasant

Fruits are obtained in abundance on the island and pine apples grow wild

Penang was ceded to the British in 1786, by the chief of the adjacent territory of Queddah.

**ROVINCE WILLESSEFY—Is a small strip of country about 35 miles in length and
4 in breddih, or WillessEFF WillessEFF with the Willy pennantly opposite to the island of Penang.

ceded to the British in 1820 by the chief of Queddah The chief town of this settlement is George Town The chunnel between the main land and the island of Penang, forms a good natural harbour for shipping Population about 52,000, area 140 square miles

Notwithstanding its closeness to Penang, the climate of the settlement differs materially in some respects from that of the island. It is not so much subject to the oppressive calling and damp heated atmosphere, and is therefore cooler, and the surfresher and more invigorating, the maximum heat being 5? The dry season includes December, January, February and March, and less ruin falls on the coast thin on the island of Penang.

MALACCA—Is an extensive district situated on the western coast of the Malay pennisula, between Singapore and Penang. It extends for about 40 miles along the coasts, and inland to a distance of about 25 miles, comprising an area of about 1,000 square miles. The coast is barren and rocky, and the interior mountainous, with picturesque valleys covered with dense, but roadless forests containing valuable tumber. The boundaries of the district have not been laid down, little in fact being known of the interior, or of any other parts, beyond the coast and the borders of the Malacca siver, which is navigable during the ramy season for small boats for about 15 miles. Several hot springs are found in the interior, distant about 18 miles from the chief town, one of which is at Sabang near port Lisanove, and another in the Naming district. These hot springs are much resorted to by all classes of natives for the curre of various local diseases.

The climate is subbrous, and the temperature equable, the thermometer rang in from 27 to 85° throughout the year. From the end of November to the end of February, the prevailing winds are northerly. It usually rains during the whole of December, but fair weather succeeds in January and February. In April the south west monsoon commences, and is succeeded by the north east monsoon in November. The most unhealth, time of the year, is during the Sumatra giles, in August and September. Land winds blow at night throughout the entire year.

The vegetable productions of the country include rice, sago, pepper, coconauts and fruits. In mines are worked in various parts. The inhabitants, numbering about 54 000, are chiefly Malays, Portuguese and Chinese. Malacca, the chief town, is picturésquely situated at the entrance of the Malacca river, and is one of the oldest European settlements in the East It was founded by the Portuguese in 1510, and held by them till it was taken by the Dutch in 1612. The Dutch were dispossessed by the English in 1795, but were reinstated in their sover eighty over the territory in 1818. By a treaty, however, concluded with Holland in 1824, Malacca was finally coded to the English.

SINGAPORE—An island in the strait of Malacca, situated off the southern extremity of the Malay pennsula. It is separated from the main land by a narrow channel not more than if of a mile in width. The island is about 27 miles long, and about 11 miles broad, and comprises an area of about 27 square miles.

The surface of Singapore is beautifully diversified with hills, valleys and plains, the whole being covered with a luxuriant vegetation down to the water's edge. The only hills of any considerable elevation is Bukit Tehna, or the tin h ll, near the northern coast and about 1,200 feet in height. The soil is fertile, producing sugar, cotton, coffee, nutmegs, pepper and coccanuis

Singapore, the chief town and the seat of Government, is situated on the south side of the island, on both banks of a salt water creek, navigable for I ghters and other small craft. It is one of the great emporiums of trade in the East, and possesses a splendid harbour, safe, easily approached and well sheltered. Latitude 1° 17.20° N. Longitude 103° 51.18° E.

The climate of singapore, though sultry, is not unhealthy. The atmosphere is in general extremely moist, moderating the high temperature and agreeing well with European constitutions. At night, dense foges spread over the island and at particular seasons the dews are heavy. The thermometer soldom rises higher than 86°, or falls below 70°, nor does it vary more than four or five degrees in the 24 hours. The north east monsoon commences about the 1,th October, continuing until the setting in of the south west monsoon, about the middle of April. Rain is never very constant, and the average yearly rainfall is about 50 inches.

188 Aden.

The inhabitants, principally Malays and Chinese number from fifty to sixty thousand, the Chinese being the most numerous as well as the most industrial class

The town was in ancient Malay settlement. It was taken by the British in 1818, and the sovere, any of British was confirmed by a convention with the Dutch in 1825.

ADEN

Aden is a peninsula siturted on the south coast of the Province of Yemen, in Arabia Felix, and is located in Latitude 12° 47 North, and Longitude 45° 10 East

The British territory includes the peninsula and extends to a creek named Khor Maksar, to two miles to the northward of the defensive work cross the Istimus. The adjoining peninsula of jebel libran, generally called little Aden, is within British

limits as is also the hirbour. The area of the hind may be approximately stated at about thirty five square miles. The population, exclusive of the garrison, was 19,790 in 1872.

The inhibited pennsula is about fifteen miles in circumference, of an arregular o'al form, miles in its greater, and three in its lesser diameter, and is connected with the continent by narrow neck of land, 1350 ands in breadth which is in one place nearly covered by the sea at high spring tides, in fact it would be, were it not for a cruseway constructed for the convenience of the land triffic, and the passage of the Sheikh Othman raqueduct

Aden is a large crater formed of lofty precipitous hills the highest peak of which has an altitude of 1775 feet these on the externo sides slope towards the see, throwing out numerous spurs, which form a sense of valleys radiating from a common centre. A grup exists opposite the fortified island of Seerah, the post tion of which would induce the belief that the circle was to ene time complete, but that some come uslos of shature produced the grup.

Aden West Bay, more generully I nown as Aden Back Bn, formed by the pennsoula of Jebel Ishsan on the yest, and Jebel Shum Shum on the east, is about eight miles broad from east to west, by four miles from north to south, and is dayied into two bnys by a spit which runs off half a mile to the southward of the small island of Aliyah. The depth of water in the western bny is from three to four fathoms, decreasing gradurily towards the shore, across the entrance, four and a half to five fathoms, and at a distance of two miles out side, ten to twelve fathoms.

There are several islands in the inner bay, the principal, Jazira Sawayih, or Slave Island, is 300 feet high, and almost joined to the main land at low water

The churte during the north east monsion, or from October to April, is cool and plet and, prittualarly in November, December and January. D iring the rem under of the year, hot study winds, known as ishand, or north, indicating the direction from which they come, pre vall within the criter, but on the western or Steamer Point side, the breezes coming directly off the sea, are fairly cool, and that locality is accordingly much prefixered by European readents. The months of May and September are especially disagrecable, those being the period of the change of the monsions, when the wind almost ent rely ceases, and the air is close and oppressive towards morning a cool and refreshing land breeze generally springs up. Aden is not usually considered by med call men to be an unlealthy station, but it is a well ascertimed fact, that long residence impairs the faculties and undermines the constitution of Luropeins, and even natures of India suffer from the effects of too prolonged aff abode in the settlement.

The town and purt of the military cantonment are within the criter, and consequently are surrounded on all sides by hills, save on the eastern side, where a gap exists

The supply of water which is now plentiful in the settlement, is derived from four sources, are, wells aqueducts, tanks and reservoirs, and condensers. The annual rainfull at Aden is very limited, seldom exceeding six or seven inches, as long as the tanks have water in them, the three condensers on the settlement are not worked, from these water is obtainable on an entre, ency to the extent of 46,600 gallons per them, should the supply in the tanks and wells fall short at any time. There are, in addition, several condensers belonging to private companies who sell water to the public

The gririson and camp followers number 3,000. Europeans live in Adea in exactly the same minner is in India, but the actual expenditure incurred, is about 20 per cent in excess of what it would be in Bombay, and consequently still greater than what would be required in the modissil. Wines, spirits, beer and European stores are somewhat cheaper than in India, owing to Adea being a free port, but unless private individuals import their own requirements, such articles can only be purchased from the local shop keepers at about India prices

The settlement is presided over by an officer who is styled *Political Resid int*, and who resides at Steamer Point, but his office is in the criter. The Resident has two assistants and there is a cantonifhan magnitant, who is also eroffico, an assistant. These officers perform all the evil revenue, judicial and ministerial duties of the settlement. Aden is politically subject to the Government of Bombay, and is considered for legal purposes as put of British India.

Since its capture in 1839 by the British, great attention has been paid to the fortifying of Aden, and all the latest improvements, in engineering and artillery, have been applied to render it almost impregnable

The port of Aden is in charge of a Conservator, and is regulated by the Indian Ports Act Since the opening of the Suez Canal, the visits of ships of foreign navies are becoming more frequent yearly, necessitating a vessel of war of some sure being always stationed at Aden

The Arab tribes we have to deal with at Aden are the following, vis -

to Ras Amran This people have a high reputation for courage

The Ab lalt tribe, inhabiting a district lying in a north north westerly direction from Aden, called Lahe, about thirty three miles long and eight broad. Al Haustah, the capital, where the Sultain resides, is situated about twenty one miles from the Barrier Gate. The population of this district is about 15 000. The Abdalis are the most civilised but least warlike of all the tribes in south western Arabia.

The Fadhli tribe, inhabiting two large districts, with a sea board of too miles, extending eastward from the boundary of the Abdali Shograh, their chief sea port, is situated 60 or 70 miles from Aden The Fadhlis are proud, warlike and independent, possessing in a high

70 miles from Aden The Fadhiu are proud, warlike and independent, possessing in a high degree the virtues and vices of the true Bedavon. Their number of fighting men is about 6,700. The Abrab tribe, inhibiting a district, the coast line of which stretches from Bir Ahmed.

There are other tribes, but as they do not reside in the immediate vicinity of Aden, it is finecessary to refer to them

The language of the place is Arabic, but other Asiatic tongues, as Hindustani, Persian, Gujarati, Sindi, &c, as well as several European languages, are spoken and understood

THE ISLAND OF PERIM

Attrobed to the Government of Aden is the island of Perim known among the Arabia subjoor. It is situated in the Struts of Babel Mandels, a mile and a half from the Arabian, and eleven miles from the African coast it has an excellent and capacious harbour, about a mile and a half in tength, half a mile in breadth and with a varying depth of from four to six fitthms. The highest point of the island is 245 feet above the level of the sea. The island was first taken possession of by the East India Company in 1799 but was then deemed untenable as a military position it was to eccupied in the beginning of 1857, a light house erected, and quirters but It for a detrehment of native infantry, fifty strong, who now garrison the place under the command of a British officer. This detachment is relieved every two months

All endeavours to procure water have failed, and but a scanty supply is procurable from the adjacent coasts, a condensing apparatus now supplies this want as at Aden

The only other British possessions in the vicinity of Arabia are, the Mirah Islands in the Bay of Tyurra, the island of Eibel near Zaila, and the Koorna Moorna Islands on tle Mahra coast of Arabia. They are only va uable for the guano deposits which are found upon them

GLOSSARY OF INDIAN TERRITORIAL DESIGNATIONS

- ARAKAN—A tract of country about 300 miles in length, situated to the cast of the Bay of Bengal, between the parallels of 18° and 21° 30 N, and mendians of 92° and 93° L, under the British Burmath jurnsdiction, comprising the districts of Akyah, North era Arakan, Kyoukhypoo and Sandoway—(See p 87 and 88)
- BAGHELKHIND—The country of the Bighelis, embracing the native states of Rewil, Aigode, Minhit, Sohiwal and Kot, under the Central India Agency—(See p. 112)
- BARI DOAB -The plan country between the Sutley and Ravi, and the Bras and Ravi rivers Do its signifies two waters (See p 23)
- Behar —A province under the Bengral jurisdiction, comprising the divisions of Putn and Bhagalpur —(See p 51 52 and 55)
- BENGAL—A Province under the Bengal jurisdiction comprising the Burdwan, Rayshahye and Cooch Behar, and Dacca divisions (See p. 47.48.49.50 and 55.)
- BENGAL PRESIDENCY—The chief Presidency of British India All territory not included within the Bombay and Madris Presidences, his been hitherto deemed as come ag within the limits of this third great division of India, designated The Bengal Presidency. This designation, though still munitimed for convenience, is however, now regarded as obsolete, considering the many distinct provinces, and independent territorial jurisductions which it now embraces—(See p. 5)
- BERAR —The country assigned by the Nizam of Hyderabad to the British, and known as the Hyderabad Assigned Districts, or Berat —(See p. 95 and 96)
- BILYTIANA —So called from having been the possession of the Bhattis of Rajput descent A tract comprised within the British district of Sirsa and the northern portion of the Bickaneer state between the parallells of 29° 12° and 30° 30°, and meridians of 73° 0 and 75° 20
- BUYDELKHAYD —The country of the Bundel's A tract bounded on the west and north west by the Gwalior state on the north erst by the Jumna River which separatest from the British districts of Etawah, Cwappore, Fitchpur and Alihabada, on the east by Bighelkhand, and on the south by the British districts of Sauger, Dunoh and Jubulipore —(See p. 11° 114 and 115)
- BHABAR—A belt of waterless jungle, formed of boulders and the debris of the lower ranges of the Himiliyas, extending from four to fourteen miles in breudth, and bing bet ween the Tura and the sub linuarity as —(See p. 36)
- BABRIAWAR —A district in the peninsula of Kattywar, province of Gujarat, named from the Babria tribe of coolies who inhabit it, lying to the west of the Goledwar district.
- BHAKAR.—A tract of rugged hill country near Mount Abu, to the east of the Sirohee strict inhabited by Grassias, a half blood tribe between Bhils and Ruputs—(See p. 105)
- CARNATIC -See Karnatik
 - CHHATTISGARH—The south eastern division of the Central Provinces, comprising the districts of Raipur, Biltspur and Sambalpur, between the partillels of 80° 30° and 83° 15 N°, and meridians of 16° 50° and 23° to E, bounded on the north by Reanh native state, and province Chot'i Nagpore of the Bengal jurisdiction, on the south by Bastar native state, and on the west by the distincts of Chanda, Bhandura, Bulagbut, Seomi and Mundla of the Central Provinces—(50° p. 76).
- CHOTA NAGORE.—A province under the lengal purediction comprising the districts of Hurithigh, Loharduzgh, Singhbhoom, and Manbhoom, and the Garbyat stitle of Ching Bright, Korty, Sargua, Jashpur, Udapur Garpur and Bonat—(de
- p 53 and 55)
 Chappan —A stretch of rugged hill country and jungle in the south east corner of the Oodey
- pore state, Rajputana (See p 105) CHAUMELA.—A strip of country in the extreme south east corner of Rajputana.—(See p 105)
- CHAUMELA—A strip of country in the extreme south east corner of Rajputant—(See F. S.).

 CHRCARS—See Northern Circars

 DECCAN—In its usual acceptation implies the tract of country in Southern India situated.
- between the Nerbudda and histan rivers. Properly speaking however it includes the whole of the territory lying south of the Vindlay mountains which separate it from Hindustan on the north, and between the Existent and Western Ghair

- DERIVIT OR DAMAN, the borter—The country stretching between the Sulman range of hills and the Indus, and so called from the three towns, Dera Ismail Khan, Dera Ghan Khan and Dera Fatek Khan Iying within it.—(See p 22.)

 Duars—Passes leading from the Bhutan mountains into the Darrang and Kamung districts of
- Assum, including the country on the British border to their south. There are eleven bordering on Kooch Behar and British territory, between the rivers. Tista and Monas, five on the north frontier of the Kamrup district, and two on that of the Darrang district.

 GODWAR.—A small trict of hilly country lying between Sirohee nature state and Merwars, on the boundary between the Oodeypore and Jodhpore states in Kajputan.
- GOHELWAR.—A district in the peninsula of Kattywar, province Gujurat, numed from the Gobel Rajputs by whom it is principally peopled, lying south of the Ahmedabad district, and on the east of districts Bhairwar and Kattywar
- GONDMANA —Or the land of the Gond race, an extensive, imperfectly defined hilly tract of Central India, it may however be considered as lying between Latitudes 15° 50° and 14° 30 N, and Longitudes 77° 40° and 87° 30 E. This name is now regarded as obsolete.
- GUJARAT—An extensive province of the Bombry Presidency, comprehending within its limits the pennisula of Kaitiyans, the whole territories of the Guskhwar and of his tribitatines, together with the petty independent states, in Mahi Kanta and obmoded on the north by the Gulf of Cutch and the territories of Millinn, Marwar and Meywar of the Rajputani Agency, on the south by the Gulf of Cumbay and the I rush districts of khandesh and Swat of the Bombry Presidency on the east by the Khindesh district, and Milna of the Central India Agency, and on the west by the Arabin Sea—(See P 143, 148 and 154).
- GARHWAL BRITTSH AND NATIVE—A tract of country in the Himilay is, bounded on the north by the native state of Bashahr of the Punjab, and Hundes or south western Thee, on the east by the British district of Behra Dun. The native portion is the strict of Tehri, the British portion is the district of Garhwal in the kumaun division of the North Western Provinces—(See p. 3) and 5(8).
- HALLAP OR HALLAWAR district in the pennisula of Kattywar province Gurirat, named from the Hilla tribe of Rapputs who inhabit it. It is bounded on the north by the Galfflor of Cutch on the north esty by the district of Virchu kann and Jirilawar on the east by the district of Kattywar on the south by the district of Kattywar and Sorath, and on the west by the district of Ohmandal
- Haraoti-A treet comprised within the native states of Loondee, Rotah and Jirallawar in the Raiputana Agency -(See p. 103)
- HARRIANN —A tract comprised in the British district of Hissar, and the northern portion of the Bickaneer state lying between Latitude 28° 33 and 30° 0 N, and Longitude 752° 0 and 76° 22° L
- HUNDES OR NARI KHORSUN —The south western portion of Thibet lying to the north of Guila and Kumaun
- JAINTIA HILLS-A hilly trict adjoining the Khasi hills on the east, and comprised in the district named Khasi and Jaintia hills.-(See p. 65 and 68)
- JAUNSAR BAWAR —A tract comprising the northern sub division of district Dehra Dun, in the North Western Provinces (5ee p. 36)
- North Western Provinces—(See p. 36)

 JACH OR CHAJ DOAR.—The plain country between the Jhelum and Chenab rivers of the Junjab—(See p. 23)
- JHALLAW AD —A district in the peninsula of hattywin, province Guyarti, named from the Jhilli rube of Rajpurs who principally people. It testends over the north-eastern part of the peninsula on the south and south west are the districts of hatty war and Hallar, and on the sets in the district of Machukanta, area 2013 square in leg-littly DOS Machukanta, which was not because the Buss and Sutley rivers of the Punjab—(Scenario Revenue).
- p 23)

 KANARA A trust stretching along the western coast of India from the Portuguese territor, of Goa down to the district of Mulabar. It is divided into north and south, the former portion naming it de bistrict of Kanara in the Bombay Presiders', the fast er

192 Glossary of Indian Territorial Designations,—Continued.

being the district of the same name in the Madras Presidency - (See p 122 and 145)

- KARNATIC.-A division of Southern India confined to the eastern side of the Madras Presi dency. The limits were probably at no time very accurately or clearly defined.
- It is said to commence at the southern limit of the Kistna district, and to extend down to Cape Comorin KATTYWAR -The name of a peninsula comprehended in the province of Guiarat, and lying to the west. On the north it is bounded by the Gulf of Cutch, on the west and south
- by the Arabian Sea, and on the east by the Gulf of Cambay (See p 153) KHASI HILLS—A tract of hilly country lying between the Assam districts of Kamrup and Sylhet, and between the Garo and Juntry hills. This tract and the Jaintia hills comprise a district in Assam —(See p 65 and 68)
- KONKAN -A narrow tract in the Presidency of Bombay, comprised in the districts of Thana, Kolaba and Ratnagiti, and stretching along the coast from the native state of Sanantwari, on the frontier of Goa, to the Daman river on the north, a length of about 330 miles, with a breadth varying from 25 to 50 miles -(See p. 154.) MACHU KANTI -A district in the peninsula of Kattywar, province of Gujarat, named from the
- river Machu which flows through its centre to the Gulf of Cutch, lying to the west of the Ihallawad district MAHI KANTA -A truct lying on the north east of the province of Gujarat, extending from the
- Ahmedabad district to the Rajputana frontier (See p 153) MALABAR -A truct naming a district of the Mudras Presidency, bounded on the north by Kanara and Coorg, on the east by Mysore native state and district Coimbatore, on
- the south by Cochin native state, and on the west by the sea (See p 122) MALLANI -A tract within the territory of the Jodhpore native state, lying on the south west of Rajputana, bounded on the north west by Jeysulmere native state, on the east and
- south by Marwar, and on the west by Sind (See p 102 and 103) M LLWA —A tract in Central India, bounded on the west by the Aravalli range, on the south by the Vindhya chain of hills, on the east by Bundelkhand, and included in the south ern portions of the Rajputana and Central India Agencies - (See p 112 and 115)
- MARWAR -Another name for Jodhpore native state in the Raiputana Agency (See P 102)

- the Satpuras, which enclose it on the south The British portion is the district of that name in the Nerbudda division of the Central Provinces -(See p 75)
- NORTHERN CIRCARS An antiquited division of the Madras Presidency between Latitude 15° 40 and 20° 17 N, and Longitude 79° 12 and 85° 20 L, about 470 miles in length The Northern Circars formerly comprised the tracts of Chicacole Rajahmundry Ellore Condapilly and Guntoor, the whole of which are now included in the Kistna, Godavari, Vizigapatam and Ganjam districts of the Madras Presidency - (See p 119.)
- OKHMANDAL -- A small district in the peninsula of Kattywar, province Quiarat, at the north west angle of the peninsula
- ORISSA -A province under the Bengal jurisdiction, comprising the Orissa division, consisting of the districts of Balasore, Cuttack and Poorce, and nineteen tributary states -(See p 53 54 and 55)
- PATAR -A remarkable plateau on the eastern side of Rajputana -(See p 105)
- RECHNA DOAR.—The plain country lying between the Ravi and Chenab rivers of the Puniah -(Sec p 23)
- REWA KANTA -A tract lying along the north east of the Gujarat province, of the Bombay Presidency, south of Mahikanta, and between the rivers Tapti and Mahi - (See p 153)
- ROHILKHAND -An extensive tract, mostly plain, bounded on the west and south by the river Ganges, on the south east by Oudh, on the north east by Lumaun and Nepal native state and on the north by British Garhwal, comprised within the districts of Bijnor, Moradabad Bareilly, Budaun Shajihanpur and the Tarat under the title of the Robilkhand division Robilkhand was ceded to the British by the Nawab of Oudh in 1801 - (See p 30)
- SHALLAWATI -A tract comprising the northern portion of the Jeypore native state, in Rai putana - (See p 102 and 103) SIND, (from Sindlu, a collection of waters) -The northern province of the Bombay Presiden
- cy, bounded by the Rann of Cutch on the south, by Rasputana on the east, by the Punjab on the north east, by Baluchistan on the north and west, and by the Arabian Sea on the south west - (See p. 146 and 154)
- SIND SAGAR DOAR -The plain country between the Indus and the Chenab rivers on the south and the Indus and the Jhelum rivers on the north - (See p 23)
- SIRHIND -An extensive tract of the Punjab jurisd ction, stretching east and west from the extreme north east corner of the Bahawalpur native state to the Umballa district, and north and south from the river Sutler to Harriana, about 220 miles in length from east to west, and 160 in breadth from north to south
- SORATH -- A district in the peninsula of Kattywar, province Gujarat, Bombay Presidency, the most southern of the pen usula bounded by Hallar district on the north, by Babriawar on the east, and by Kattywar on the north east
- SUNDARBANS -The southern portion of the Delta of the Ganges in the Bengal jurisdiction This tract may be described as a crowded cluster of densely wooded small marshy islands separated by narrow channels and formed by the deposition of the enor mous quantity of earth swept down by the Ganges This alluvial archipelago is about "00 miles in length and about 75 miles in breadth. An area of 5,340 square miles, is almost totally irreclaimable —(See p 46 and 56)
- TARAI -A long strip of murshy jungle, stretching along the foot of the sub Himulayan ranges and between them and the northern plains of India A deadly mulana arises from the whole region rendering it almost uninhabitable by man, and danger ous to traverse between the months of April and October - (See p 30, 36 and 181)
- TENASSERIM —The southern portion of the British Burniah province stretching along the eastern coast of the Bay of Bengal, and embracing the districts of Amherst, Tavoy and Mergus, in length about 500 miles .- (See p 86 and 88)
- THAR, THE.—The great sandy desert of north western India extending from the Aravallis to the Sutley and the Indus rivers and from the left bank of the lower Indus in Sind to the north eastern limit of Rajputana a length of some 500 miles. This desert is called by the natives Thar Thall, or Dhat. In Hindu geography it is termed marus thulli, or the region of death - (See p 104)

RELIGIONS AND PEOPLES OF INDIA.

BRIDE GENERAL DESCRIPTION

ABOUT three fourths of the vist population of India comprising upwards of two hundred and forty two millions, (See p 9 and to,) are Hindus professing the religion of Brahma in its many different forms, and although sub-divided into many sects, are more or less exclusively devoted to that form of worship

The doctrines of the more ancient religion of the Hindus are contained in the Velas, or four sacred books each composed of two parts, one comprising forms of worship, the other, moral and religious instruction. These Vedas are of very high antiquity, being supposed to date from the fourteenth century before the Christian era. Their primary doctrine teacher Theorem, or the worship of a self existent Supreme Being, to whom all are subject, 'There is in truth but one Deity, the Supreme Spirit, the Lord of the Universe, whose work is the universe.

The Puranas, the other sacred books of the Hindus, as well as the Institutes of Menu, are compositions of later date, and are the exponents of modern Brahminism The Puranas are eighteen in number, and were mostly written in support of the doctrines of particular sects, and the supremacy of the priesthood. They are for the most part legendary in their character The pure Theism of the ancient Hindu faith as defined in the Vedas, has become developed into an elaborate polytheistic system, the most gigantic and degrading principle, Vislinu, 'he preserving principle, and Siva, the destroying principle, being regarded as a Triune manifestation of the divinity, and with other personified attributes and energies, but ing been made the objects of worship in an infinite variety of forms. Subordinate to these are many lesser divinities regarded as goddesses there is a goddess of learning and eloquence (Saraswati), a goddess of wealth (Lakshmi), the goddesses Pariati, Bhou ani or Durg i, names representing the acting powers of earl and destruction, as well as others. Of the Hindu sects, the most influential and numerous are the followers of Siza and I ishnu The worship of Si u prevails mostly among the members of the upper classes, especially in My sore and the Maratha provinces, while that of Vishnu prevails among the Hindus of Bengal, the North Western Provinces and Oudh A large portion of the sacred writings of the Hindus is occupied with the history of the various incarnations (at atars) of this latter deity and Vishnu are distinguished by certain colored marks on the forehead, those of the Siva sect being horizontal, while those of the Vishnusites are perpendicular

The leading dogmas of the Brahminical faith are, the supremacy of the priesthood, and metempsychosis or the transmigration of the soul after death. Pilgrimages to remote rad holy places, and penances and offerings to the priesthood, are held in high esteem, the avid ance of impure or forbidden food, especially the flesh of the cow or bull, which is considered sacred, and the preservation of caste, are among the most important moral duties enjoined on the Hindu. In no country does the religion of the inhabitants appear so promucent in every act as in Hindustan. It pervades the entire frame of civil society, and mixes itself up with every concern of his, public, private or domestic. The institution of caste, so characteristic of Hindu society throughout nearly the whole country, by which ill classes remun, from futher to son, occupying the same pursuits and positions in his, is nowhere pursued to such (often arbitrary and mercitess) rumifications as in India. Purity of caste being incapable of acquisition, and therefore to be preserved at all hazards and under the most trying circumstances.

In the outset the Hindus were disided into four great classes or castes, the Brahams or saccrdotal class, the Kicheryus, warriors and rulers, Vausyus, capitalists, traders and farmers, and Suderus, laborers, artizans, and menual servinist. These great dissions though here ditary, impassable and indefeasible, ire now, however, purely theoretical, there being practically an immense number of virous castes, whose members intermary only among themselves, and obstim from associating with those of other castes. Every caste and sub division of a caste, forming a little distinct society in the general community

The Brahmans and Kshetriyas are regarded as greatly superior to the rest of the population, and are distinguished by wearing a certain cord termed 'the thread'. The follow

usg passiges denote what obsequious reverence the Brahmans claim for their order 'A Brilman, whether learned or ignorant, is a powerful divinity' [Inst of Menn] 'Those excellent Brihmans who are guilty of such crimes as their, are offenders agrunst themselves, not others'—'Brihmans are masters of the Kshetriyab, Vaishyas and Sudras, they are misters of one unother, and to be worshipped, being earliby gods' (Pathua Puranz') 'Whit ever exists in the universe is all in effect, though not in form, the weithful of the Brahman, since the Brihman is entitled to it 'll, by his primogeniture and eminence of birth'—'The Brahman eats but his own food, wears but his own apparel, and bestows but his own in alms He alone deserves to possess the whole earth' (Zhad)

The military profession is held to be nearly as honorable as the sacerdotal, and numerous Britaniums are found filling its ranks, while the mercantile classes are regarded with much less consideration.

The spread of education is gradually undermining the influence of caste prejudices

Other forms of religion are those of the Buddhists, Jains, Sikhs and Mahomedans, the Iss unnecessary to refer to, beyond stating, that they consist chiefly of two sects, the Shanks and the Shans, the former regarding All as the successor of Mahomet, and equal to him in dignity, and who reject tradition, the latter insisting on the supremicy of Mahomet over all created beings, and acknowledging tradition. The Mahomedan religion was founded in Arabia, and introduced into India by the Arabis in the sixth and seenth centuries.

Bu lithism, which now prevails over all Central and Eastern Asia, appears to have original ed, and at one time to have extensively prevailed in Hindustan It is believed that Buddhism. and Brahmanism are but two offsets from a primitive religion, which once prevailed over the whole of Asia beyond the Indus Being opposed to the polytheism of the Brahmans. Buddhism became subjected to considerable persecution at their hands, and is now all but extinct in India, it is, however, professed by a large number of the inhabitants of Arakan. Burmah, Bhutan Negal and the island of Cevion Though almost extinguished in Hindustan, the religion of Buddha, the 'wise', the 'enlightened,' is still, numerically speaking, the prevailing religion of the world It has now been in existence for nearly 2,500 years, and its adherents are estimated at upwards of 400 millions, or more than a fourth of the human race The Buddhists, while they reject the multitudinous pantheon of the Hindus, admit an indefinite number of incarna tions of Buddh, who is supposed to animate in succession the bodies of their chief Lamis or priests. They believe in the eternity of matter, and the supremacy of intelligence as a property of matter They deny the authority of the sucred books of the Hindus, do not acknowledge caste, and have no respect for fire, but have great regard for animal life, and live much in monasteries Buddhism is practically a system of Atheism and Athelism The Nirvána, to which the Buddhist aspires, is absolute NOTHING Buddhas are beings (of whom there may be many), who have raised themselves by austerities of all kinds to a state of apathy, and then have evolved certain doctrines and sacred books. The founder of Buddhism was Sakya Muns or Gotama, who died 543 B C. The sacred books of the Buddhists are called TRI PITAKA, (three caskets,)

The religion of the Jams and Sikhs is briefly described in the following alphabetical list of the principal classes of the different peoples and tribes inhabiting India

There are murked differences in appearance among the native rices in different parts of the country, and these depend parity on race, and brutly, no doubt, on climate. The less accessible parts are still inhabited by people hardly removed from the lowest forms of savage lift, while the coast, the plains, and great river valleys have been the seat of cavilarition from timi-immemorial. The inhabituits of Northern, North Western and Central Indra, generally, are hardsome, till, of fair complexion, well developed, honest, maily and of more than a verage intellect. They make excellent soldiers and are ingenious in certain manufactures and brudi crifts. The same general description applies, with some marked exceptions, to the inhabituits of the mountain districts in other parts of India, though they are less stall. On the other hind, the people dwelling in the lower provinces of Hengal, in the river villeys near the mouths of stream, and in the Deccan, are lower in stature, darker in colour, less developed physically, less of the contractions of the stream, and not be contracted and the stream of the stream of the colour less developed physically, less of the colour less developed physically, less of the mountain of the colour less developed physically, less of the colour less developed physically, less of the colour less developed physically, less of the colour less developed physically, less of the colour less developed physically, less of the colour less developed physically, less of the colour less developed physically, less of the colour less developed physically, less of the colour less developed physically less of the colour less developed physically less of the colour less developed physically less of the colour less developed physically less of the colour less developed physically less of the colour less developed physically less of the colour less developed physically less of the colour less developed physically less of the colour less developed physically less of the colour less developed physically less o

sincere and honest, and less favourable specimens of the human family. All the races, however, are simple in their habits, active, capable of enduring much fatigue, and much attached to their homes. Of the different races, the Bengulis, though weak in body, and wanting in moral courage, are, intellectually, the most capable of considerable and rapid advancement in the · ordinary arts of civilized life, and there is a certain amount of cunning natural to them, which makes up for their timidity

List of a few of the principal Indian Peoples and Tribes

ABARS -A wild mountain tribe occupying a tract of country to the north of Upper Assum The centre of the tract is about Latitude 28° 10 N, and Longitude 95° 20' E

ALHAS -A wild tribe inhabiting the mountainous country, situated on the northern boundary of Assam, and the eastern boundary of Bhutan The centre of the tract is about

Latitude 27° 10 N, and Longitude 97° 40' E ARABS - In Bombay chiefly, generally traders from the Red Sea and Persian Gulf A great number are also to be found in the Nizam's territory or Hyderabad, who are permanent ly settled there, and are employed chiefly as mercenanes in the military forces of that state.

AR WENIANS - Chiefly refugees from former Persian or Turkish persecution, and gener ally merchants and tradesmen settled in the principal towns and cities of India

BADAKS or BHADAKS -Hereditary thieves inhabiting the forests of Northern Oudh, and the banks of the Chambal river They lead a nomadic life and have few Hindu prejudices

BAJIKARS - The gipseys and jugglers of India, chiefly met with in Upper India BANIAS -The Hindu trading and banking class, the most influential as well as the

most despised of natives, quiet and well behaved, but fond of litigation BANJARAS or LADANAS -The carriers of the country, chiefly of grain, they own immense herds of bullocks and live generally in the open the railways have reduced this

class considerably, and their existence in the future is only a question of time. Their dress and usages are peculiar

BANRAS -Tribes separated from the Newars of Nepal, and following many of the customs of the Bhuttas

BHATS-Wandering minstrels found in Gujarat and Upper India, and exercising much influence over the population, but especially over the Rasputs

BHATTIS-A predatory tribe of Rajput descent inhabiting Bhattiana and the desert

in Raiputana, from the Sirsa and Hissar districts up to the Indus

BHILS -Rude native tribes supposed to be the aboriginal people of Central India and Gujarat, now inhabiting the mountainous parts of Gujarat, Khandesh and Malwa, and the hills along the Nerbudda and Tapti rivers

BORAS-A trading sect of Mahomedans largely scattered over Gujarat and the Dec cin, of supposed Arab descent, and resembling Jews in features and character They are in general, industrious, wealthy, and influential members of society

CHAPANS -A race of carriers of heavy goods, and grain, also cattle dealers, they are

sometimes hired by travellers as an escort in the wilder parts of India

COLLS - Aboriginal tribes inhabiting the northern part of Orissa. They are also called Hos and are semi barbarous, but hospitable, and show a love of truth, honesty and a willing ness to oblige

COOLIS-The aboriginal tribes of Gujarat and Western India. A manly and hard working people, but ferocious, much addicted to drunkenness, and once formidable rubbers-

DAUDPUTRAS (or sons of David) -A fur and handsome Mahomedan race, number ing about 50,000 They crossed the Indus from Shikarpur in the reign of Aurungrebe, and took forcible possession of the country which they now occupy on the left bank of the Sutley called Bahawalour

DHEAWARS-The husbandmen and fishers of the western districts of Nepal GARANGS -A Buddhist race, leading a pastoral life in Nepal, and shifting their abodes between the mountains and valleys in summer and winter, some are miners and traders.

GAROS -- A purely agricultural people, the inhabitants of the Garo Hills district of Assam, similar to the Mechis or Cacharis A robust, active, strong and muscular race, capable of enduring a great amount of evertion and fatigue, remarkable for their ugliness and scarcity of beard, generally truthful, easily excitable, and then revengeful, cruel and blood thirsty

GONDS - The abortonal inhabitants of a part of Central India formerly called Gond twana, they are blood thirsty, cruel and revengeful, but an athletic and well looking race,

speaking a language radically different from Sanscrit

GUJARS-The inhabitants and husbandmen of Gujarat, as well as many parts of Northern India, and the Punjab

GURKHAS -A hardy, brave, active and enterprising people, dominant in Nepal and in the hill countries westward. They are of short stature, but make excellent soldiers, and are descendents of the Hindu refugees from Mahomedan invasion, who mingled with the Tartar and Chinese people of the country

JAINS or JAINAS-A religious sect dating from the sixth century, numerous in . Gujarat, Khandesh, Rajputana and Kanara, professing the doctrines, and supposed to be an offsboot, of the Buddhists, but admitting caste,-which Buddhism rejects,-and the worship of many of the Hindu deities in addition to their own saints, twenty four in number, called Tirthankaras, e e those, who by ascetic practices, have crossed the ocean of human existence, whom they regard as superior to the gods. Their priests are of all cistes. The Jains have

always been a learned people Both Jains and Buddhists use Pali as their sacred language JARIJAS-A fine robust and warlike race, but proud, cruel and dissipated, they are

the ruling class in Cutch 7ATS -A turbulent and very ancient race who probably migrated originally from Turkestan. occupying a great part of the North Western Provinces and Rapputana. They still retain the warlike and nomadic habits of the people of that region

TEVS - Numerous in Western India, found also in Calcutta, and Rangoon Those of Bombay call themselves Bani Israel, and are probably descendants of the ten tribes, and of higher consideration than the others At Cochin they are of two denominations, the Black Jews of very ancient date, and the White Jews, more recent, who regard the others as slaves

KATARIS or KATADIS -An ancient race of Northern Konkan, Bombay Presidency, living on the outskirts of the villages, and held in abhorrence by the higher castes of Hindus KATTIS Natives of the peninsula of Kattywar in Gujarat, considered one of the royal races of India, but now greatly reduced. They are half civilised, and were once robbers and

pirates KHASIAS - The inhabitants of the Khasia and Jaintia Hills district of Assam stout and athletic race, affable, gentle and cheerful in disposition, industrious, and capable of

enduring much fatigue KHONDS-Tribes inhabiting the billy districts of Orissa, partly civilised and practising

agriculture An intelligent race, robust and muscular, having a strong love of independence but undictive, and addicted to drunkenness KOTARS -A peculiar but industrious race, exercising certain handicrafts, and having no

caste prejudices. Found in the Nilgin district."

KUNDIS -An agricultural tribe inhabiting the south and midland parts of Gujarat

KUR IIIS -A class of cultivators found in the North Western Provinces, well known for their industrious and peaceful habits

MARATHAS -A numerous and powerful race, bold, active and industrious, who originally occupied the north western part of the Deccan, but conquered a great part of Northern and Central India, confined now more particularly to the central and southern part of the Bombay Presidency, of which they form the majority of the population. Their power was broken by Ahmadshah, Abdulli, king of Kabul, at the battle of Paniput in 1761

MARAVAS -A people of considerable antiquity, inhabiting a tract of country on the extreme southern coast near Cape Comorin

MARWARIS -The trading class of Jodhpore or Marwar, found throughout India.

MECHIS, or CACHARIS -A tribe widely scattered all over north eastern Bengal and throughout Assam, called Mechis in the former, and Cacharis in the latter Of migratory habits, able bodied and well behaved, honest and trustworthy They make good soldiers and form a strong element in the military and police of those parts, and have no caste prejudices.

MERS - The inhabitants of the district called Merwita, in the Atavilli Hills of Raj putana (See page 101) They are descendants of one of the original peoples of India, and are

a savage and independent race

MIKIRS -A tribe inhabiting the hills in Nowgong, Assam, undoubtedly the most peaceful and industrious of hit tribes A fine athletic race, but devoid of personal courage

MOPLAHS, or MAPILAS -The Mahomedan inhabitants of Malabar, in the Madras Presidency A wealthy, intelligent and enterprising race, but fanatical and troublesome

MUGS or MAGHS -The indigenous people of Arakan, short in stature, hardy, inoffensive and trustworthy, with round, flat faces and a copper complexion

NAGAS-Tribes virtually independent, extending from North Cachar as far as the Dibing river in the extreme eastern point of Assam They all belong to the Indo Chinese stock speaking various dialects, which differ so much, that their own villages, lying scarcely a day's journey apart, can only hold communication by means of a foreign tongue The term Naga is probably derived from the Bengali word Nangta, meaning naked, or from the Sanskrit word naga, a snake The principal clans are the Angamis, the Rengmas and the Kachas, the first named being the most numerous and powerful An athletic, and by no means a bad looking race, brave and warlike, but also treacherous and vindictive

NAYARS -The aristocracy of Malabar, formerly hereditary soldiers, now engaged in handicraft Numerous and influential.

NAMBURIS -A class of Brahmans, considered to be aboriginal and very highly regarded, inhabiting southern India.

NAYAKS—A wild tribe inhabiting the forests between the Mahi and the Nerbudda rivers in Rewakanta, Gujarat

NEWARS - The original inhabitants of the fertile parts of Nepal before its conquest by the Gurkhas They are an industrious, ingenious, peaceable and able bodied race, chiefly engaged in agriculture, trading and handicraft They are Buddhists, but do not acknowledge, the Lamas of Thibet -(See page 181)

OORIYAS -The original inhabitants of Orissa, from whom the province takes its name.

They are a timid, effeminate, dishonest and dissolute race, but industrious

PAHARIS -The inhabitants of the mountains, or hill men

PARSIS - The descendants of a large colony of fire worshippers, who left Persia in consequence of Moslem persecution and settled in Bombay, Surat and Gujarat Many are now rich merchants and land owners, others are shop keepers, artizans and domestic servants. They are very hospitable and liberal, especially to their own people -(See p 159)

PATHANS-People of Afghan descent, inhabiting the North Western frontier of the

Punjab, Bhopal and other parts of India - (See p 173 174)

pledge.

POVINDAHS -A class of Afghans, who are at once agriculturists, traders and warriors -(See p 170 176)

RAJPUTS (Sons of kings) -The descendants of the ancient Hindu princes, and the dominant population of that portion of India on the north west called Rajputma They are a tall, proud, vigorous and athletic race, and sometimes make excellent soldiers. They are in ordinately addicted to opium, and are fit for nothing until they take it, and after its effects have presed, are little better than idiots, until the dose be repeated. Indulgence in this baneful habit is more necessary to the Rajput than his food, and to eat opium together is the most involable RAMUSIS—A predatory tribe in the neighborhood of Poons and Satara, in the Bombay Presidency—They are fatalists and have no fear of law or punishment

ROHILLAS—A people of Af_ahan descent, addicted to agriculture as well as arms, occupy into the tract called Rohikhand, named after them. They are 1 till and handome race, of a comparatively fair complexion, animated and intelligent, but utterly devoid of truthfulness. Crimes are frequent amongst them and perjury is almost universal. The Rohillas entered Hindustan are frequent amongst them and perjury is almost universal. The Rohillas entered Hindustan early in the e.g theenth century and conquered the district which bears their name. They were completely defeated by the British at the battle of Katra in 1774, an event which brought the Rohillas way to an end.

SAURIAS, or SAURAS —A wild but harmless and peaceful race inhabiting the southern part of Orissa in the Bengal jurisdiction

SHAIKH 11VATIS—A tribe of Rajputs inhabiting the northern district of the Jeypore state, which is named named after them— (See p 103)

SIGHS (Disciples.)—Viriligious sect founded by one Namal, the Guru or leader, in the fifteenth century, and occupying the Punjab, principally Stithad. They were originally pure Theast but have since much degenerated, regarding their founder as worthy of disine honors. Their religion is chiefly confined to the Punjab, and is an hereited form of the Brithmuneral tith, its chief churiteristic being the intolerance of its followers, a regard for animal life, chiefly in reference to the cow, which is held sacred, a belief in transmigration, and a total abstance from tobrace, but Phing, oppum and spirituous liquors are freely used. They have no caste prejudices and are divided into several sects, the two principal of which are, the Nahal xi' or old Sikhs, and the 'Singh' or hons. The sacred book of the bikhs, is called the Ganas, they drew the sword, and one sect commenced to require temporal power, taking the name of 'Singhs, while the rest remained quest under the name of 'Khalsa'. All are distinguished thick by their latted of the Mahomedans. They are a tall, vigorous and athletic race, and make excellent soldiers.

SOVTHAIS—A primitive people inhabiting the portion of the Bhighpur division of Bergul, known as the Sonthal Pergunnahs, (See p 52). They are an uncouth race, but make excellent navives. They number about 1,7,6,000.

SUDAS—A rude people probably of Rapput I neage, chiefly shepherds living in grass huts in the Thar or Great Desert of Rapputana, in a state of great pravation and miser. Their principal source of income consists in the sale of their daughters to neh Mahomedans, and tathe Irana of Cutch

THAGS—A confederacy of professional murderers found chiefly in Central Ind 1, and detout worshippers of the goddess Kali. They have been very greatly reduced in numbers, and may now be regarded as almost extinct, owing to the severe measures of the British Government for their suppression.

TIYARS -Cultivators on the Malabar coast, much despised by the other inhabitants.

TUDAS or TUNDAVERS—A small, primitive and normatic tribe, occupying some of the highest valleys of the Nilgiris. They are ignorant of the mythology, language minners and customs of the Hindus and are a tall, wheter nee, of a bold appearance, but quiet and honest. Their wealth consists of large herds of buffaloes, which they tend and milk, exchanging the produce of their dames for grain.

URIYAS -(See Oorayas)

WAGHIAS —A predatory tribe of Rapputs found in the Kattywar peninsula, Guarat WARALIS —A wild tribe speaking the Maritha language, and living in the forests of Northern Konkan, Bomba. Presidency

VANADIS—A wild saving trace inhibiting the country on the Coromandel Coast in the vicinity of the Nellore district, Madras Presidency. In habits relation and language they are quite distinct from their ne ghbours—they are short in stature and of black complexion, capable of enduring great fatigue, and remarkably faithful and honest

AUTHORITIES CONSULTED.

Administration Reports from 1872 73 to 1878 79, of the Punjab, North Western Provinces and Outh, Bengal, Assam, Central Provinces, Hyderabad Assigned Districts, British Burmah, Bombay Presidency, Madras Presidency, Mysore, Coorg, Rajputana and Central India Agencies.

Statement exhibiting the Moral and Material Progress and Condition of India, 1872 73, pre pared for the House of Commons, June 1874.
